Description Madecassic acid is a triterpene originally found in *Centella* that exhibits anticancer chemotherapeutic, immunomodulatory, and anti-inflammatory activities. In macrophages, madecassic acid downregulates LPS-stimulated expression of iNOS, COX-2, IL-6, TNF- α , and IL-1 β ; it also prevents activation of NF- κ B and degradation of I κ B kinase. In cellular and animal models of colon cancer, madecassic acid decreases the mitochondrial membrane potential, modulates CD4⁺ and CD8⁺ T cell populations, and induces apoptosis, inhibiting cell and tumor growth.
