Product Information

Product ID P0006

CAS No. 124123-15-5

Chemical Name

Synonym PACAP (1-38)

Formula C₂₀₃H₃₃₁N₆₃O₅₃S

Formula Wt. 4534.36

Melting Point

Purity ≥95%

Solubility Soluble in water.

Store Temp -20°C

Ship Temp Ambient

Description Pituitary adenylate cyclase-activating polypeptide (PACAP) is an endogenous peptide that stimulates cAMP production in the anterior pituitary. PACAP and PACAP-related peptide (PRP) regulate immune function and display increases in expression when hosts are challenged with bacterial pathogens. PACAP and PRP also control expression of reproductive hormones such as follicle-stimulating hormone (FSH) and luteinizing hormone (LH). Additionally, PACAP and PRP bind the PAC1 receptor and VPAC1/2 receptors. PACAP itself inhibits K⁺ amplitude of delayed rectifier K⁺ channels, exhibiting anti-apoptotic activity in cerebellar granule cells.
