

Product Information

Product ID B1879

CAS No. 2152-44-5

Chemical Name [(8S,9R,10S,11S,13S,14S,16S,17R)-9-fluoro-11-hydroxy-17-(2-hydroxyacetyl)-10,13,16-trimethyl-3-oxo-6,7,8,11,12,14,15,16-octahydrocyclopenta[a]phenanthren-17-yl] pentanoate

Synonym Betaderm, Betnovate

Formula C₂₇H₃₇FO₆

Formula Wt. 476.58

Melting Point 183.5°C

Purity ≥98%

Solubility Insoluble in water. Ethanol (62 mg/mL). Soluble in acetone, DMSO.

Store Temp Ambient

Ship Temp Ambient

Description Betamethasone valerate (BMV) is a synthetic glucocorticoid that is commonly used to treat psoriasis and dermatitis. BMV exhibits immunomodulatory, anti-inflammatory, and vasoconstrictive activity in vitro and in vivo. Across animal models of varying ages, BMV impairs maturation and viability of Langerhans and epidermal cells. BMV also decreases endogenous phospholipase activity and inhibits vasodilatory responses in skin; this partial vasoconstriction decreases blood flow, often resulting in a decrease in local TGF-β1 levels.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
B1879	25 mg	\$70.80
B1879	100 mg	\$189.00
B1879	500 mg	\$629.30
