Product Information

Product ID W0273

CAS No. 5543-58-8

Chemical Name

Synonym (+)-Warfarin

Formula $C_{19}H_{16}O_4$

Formula Wt. 308.33

Melting Point

Purity $\geq 99\%$

Solubility The solubility of (+)-warfarin in ethanol is approximately 5 mg/ml and approximately 25 mg/ml in DMSO and DMF

Store Temp 4°C

Ship Temp Ambient

Description Warfarin is an orally available antithrombotic commonly used for preventing blood clot formation and migration. The R enantiomer of warfarin is somewhat less potent than the S enantiomer. This coumarin inhibits the subunit 1 of the vitamin K epoxide reductase complex (VKORC1), depleting the reduced form of vitamin K (KH2) and inhibiting the formation of coagulation factors II, VII, IX, and X. Warfarin has a relatively slow onset and requires 1 to 2 days to take effect. This compound is highly sensitive to a wide variety of genetic polymorphisms and is metabolized by cytochrome P450C9; it also interacts with many other medications and foods, requiring diligent activity monitoring.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
W0273	1 mg	\$116.90
W0273	5 mg	\$486.20
W0273	25 mg	\$1458.50
