Product Information

Product ID E7209

CAS No. 219861-08-2

Chemical Name

Synonym

Formula C₂₂H₂₁FN₂O · C₂H₂O₄

Formula Wt. 414.43 Melting Point 152-153°C

Purity ≥99%

Solubility freely soluble in methanol and dimethyl sulfoxide (DMSO), soluble in

isotonic saline solution, sparingly soluble in water and ethanol, slightly

soluble in ethyl acetate, and insoluble in heptane.

Pricing and Availability

Bulk quanitites available upon request

Description Escitalopram is the S-enantiomer of racemic citalopram; like citalopram, this compound is an SSRI that exhibits antidepressant and anxiolytic qualities and is also effective in treating OCD. Escitalopram inhibits the serotonin transporter (SERT), preventing reuptake of serotonin. Escitalopram may have other potential uses, as it decreased weight in a study of obese subjects with binge eating disorder and displayed anti-inflammatory activity through inhibition of NO and TNF-α production. This compound is associated with prolongation of the cardiac QT interval and may inhibit osteoblast and osteoclast formation as well.
