Product Information

Product ID P3600

CAS No. 344458-15-7

Chemical Name

Synonym

Formula $C_{17}H_{17}N_3O_2 \cdot HCl$

Formula Wt. 331.80

Melting Point

Purity $\geq 95\%$

Solubility DMSO 66 mg/mL (198.91 mM)
Water 66 mg/mL (198.91 mM)
Ethanol Insoluble

Store Temp $-20^{\circ}C$

Ship Temp Ambient

Description PJ34 is a phenanthridinone derivative that acts as a competitive poly(ADP)-ribose polymerase (PARP) inhibitor. PJ34 exhibits cardioprotective, neuroprotective, anticancer, and anti-diabetic activities. In in vitro and in vivo models of oxygen glucose deprivation, PJ34 protects against stroke-related ischemic brain injury. This compound is also cardioprotective against myocardial infarction, decreasing infarct size and postsystolic shortening. In diabetic NOD mice, PJ34 decreased insulinitis, beta-cell destruction, and diabetes incidence by decreasing islet IFN- γ expression and inducing apoptosis in islet-infiltrating leukocytes. In mouse models of allergic encephalitis, PJ34 exhibits protective benefit by shifting the immune response from a pro-inflammatory Th1-mediated response to an anti-inflammatory Th2-mediated response. Additionally, in a variety of cancer cell lines, PJ34 induces G2/M phase mitotic arrest and caspase-dependent apoptosis, potentially due to direct antagonism of Pim-1 kinase.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
P3600	1 mg	\$83.40
P3600	5 mg	\$212.90
P3600	25 mg	\$648.30
