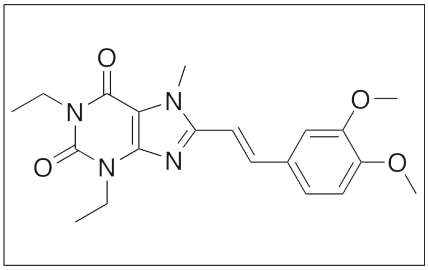
Product Information

Product ID I7478
CAS No. 155270-99-8
Chemical Name (E)-8-(3,4-Dimethoxystyryl)-1,3-diethyl-7-methylxanthine

Synonym 8-[(1E)-2-(3,4-Dimethoxyphenyl)ethenyl]-1,3-diethyl-3,7-dihydro-7-methyl-1H-purine-2,6-dione, KW-6002

Formula $C_{20}H_{24}N_4O_4$
Formula Wt. 384.43
Melting Point
Purity ≥99%
Solubility

DMSO	6 mg/mL (15.6 mM)
Water	Insoluble
Ethanol	Insoluble



Pricing and Availability

Bulk quanitites available upon request

Product ID	Size	List Price
I7478	5 mg	$91.00
I7478	25 mg	$364.60
I7478	100 mg	$1086.00

Store Temp Ambient
Ship Temp Ambient

Description Istradefylline is a competitive inhibitor of adenosine A2A receptors that exhibits tremorlytic activity. Istradefylline is currently under examination as a potential treatment for Parkinson's disease, as it decreases "off" time in subjects with Parkinson's disease without worsening dyskinesia. Istradefylline increases dopamine levels in normal and 6-OHDA-lesioned animal models, improving cognitive performance. In other animal models, istradefylline decreases GABA release and elicits conditioned place preference (CPP) and increases locomotor activity, indicating a potential role for adenosine receptors in reward and reinforcement.
