

Product Information

Product ID C822706

CAS No. 10140-70-2

Chemical Name (4S)-11,13-Dihydroxy-4-methyl-4,5,6,7,8,9-hexahydro-2H-3-benzoxacyclododecine-2,10(1H)-dione

Synonym

Formula C₁₆H₂₀O₅

Formula Wt. 292.33

Melting Point 203-205°C

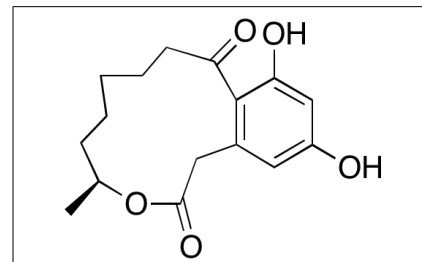

Purity ≥98%

Solubility Soluble in DMSO, ethanol, methanol and DMF.
Insoluble in water.

Store Temp -20°C

Ship Temp Ambient

Description Curvularin is a macrocyclic lactone metabolite produced in several fungi. In a model of transgenic DBA/1 mice curvularin significantly reduced the expression of proinflammatory genes involved in the pathogenesis of collagen-induced arthritis and rheumatoid arthritis. In another study using human epithelial alveolar cell line A549/8 as the model, curvularin was shown to inhibit the cytokine-mixture-induced inducible-nitric-oxide-synthase promoter activity in a dose-dependent manner.
