

Product Information

Product ID E583731

CAS No. 17372-87-1

Chemical Name

Synonym AMI-5, PRMT Inhibitor, Eosin Yellowish

Formula $C_{20}H_6Br_4Na_2O_5$

Formula Wt. 691.86

Melting Point

Purity $\geq 95\%$

Solubility

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
E583731	1 g	\$50.00
E583731	10 g	\$140.00

Store Temp 4°C

Ship Temp Ambient

Description Eosin Y disodium is a tetrabromofluorescein yellow-red dye from the xanthene family that gives green fluorescence. This dye has commonly found use as a biological stain, and can also be used in determining many basic drugs by forming complexes with the acidic carboxyl group. Eosin Y has also been used in producing devices, such as electrodes, modified to facilitate electron transfer efficiency, to evaluate toxicity of 2,4-dichlorophenol to HepG2 cells. Quite interestingly, Eosin Y has demonstrated effective use as a structure directing agent in the production of flexible dye-sensitized solar cells. Eosin Y has also found use as a catalyst in the organic synthesis of tetrahydroquinolines. Non-selectively inhibits protein methyltransferase (PRMT).
