Product Information

Product ID A6982

CAS No. 88495-63-0

Chemical Name (3R,5aS,6R,8aS,9R,10S,12R,12aR)-Decahydro-3,6,9-trimethyl-3,12-epoxy-12H-pyrano[4,3-j]1,2-benzodioxepin-10-ol,hydrogen succinate

Synonym Artesunic acid, Dihydroqinghaosu hemisuccinate, Arsumax, Plasmotrin, Qinghaozhi

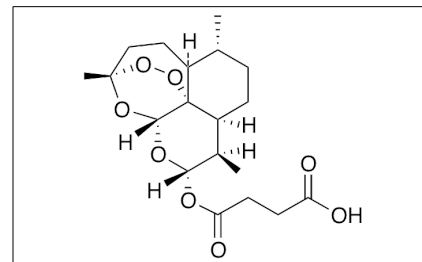

Formula C₁₉H₂₈O₈

Formula Wt. 384.42

Melting Point 132-135°C

Purity ≥98%

Solubility Slightly soluble in water.

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
A6982	50 mg	\$44.80
A6982	100 mg	\$67.40
A6982	500 mg	\$112.40
A6982	1 g	\$164.90

Description Artesunate is a sesquiterpene lactone derived from *Artemisia*. Artesunate exhibits anticancer chemotherapeutic, antiviral, anti-angiogenic, and anti-parasitic activities. Artemisinins such as artesunate are best known for their antimalarial activity. Artesunate induces G0/G1 phase cell cycle arrest, increases levels of Bax and caspase 3, and decreases levels of Bcl-2, inhibiting tumor growth in animal models of breast cancer. In models of cervical cancer, artesunate inhibits production of prostaglandin E2 (PGE2) and decreases the number of Treg cells, also inhibiting tumor growth. Artesunate induces cell cycle arrest and inhibits replication of Polyoma virus as well. Additionally, this compound inhibits neovascularization and inflammation in corneas, increasing the Bax/Bcl-2 ratio and ROS levels, decreasing the mitochondrial membrane potential, and activating p38 MAPK. TEST!!!!!!
