Product Information

Product ID I2118
CAS No. 23210-58-4
Chemical Name

Synonym

Formula $C_{21}H_{28}NO_2 \cdot C_4H_4O_6$
Formula Wt. 474.53
Melting Point
Purity $\geq 98\%$
Solubility 15mM in water with gentle warming

Store Temp 4°C
Ship Temp Ambient

Description Ifenprodil is an antagonist at NMDA receptors specific for NR1 and NR2B subunits; it exhibits neuromodulatory, anticancer, anticonvulsant, cognition enhancing, and vasodilatory effects. In cellular and animal models of ovarian cancer, ifenprodil decreases cellular viability and tumor growth. Ifenprodil also inhibits PTZ-induced hippocampal oxidative stress, astroglytosis, and neuron loss. Additionally, this compound reverses motor deficits when co-administered with L-DOPA in Parkinson's disease models and prevents rapamycin-induced memory impairment. In vivo, ifenprodil also induces mild vasodilation, decreasing blood pressure and increasing heart rate.
