Product Information

Product ID P200000

CAS No. 1196109-52-0

Chemical Name N-3-Pyridinyl-4-[[3-[[5-(trifluoromethyl)-2-pyridinyl]oxy]phenyl]methyl]-1-piperidinecarboxamide hydrate

Synonym PF3845

Formula C₂₄H₂₃F₃N₄O₂

Formula Wt. 456.47

Melting Point

Purity ≥98%

Solubility DMSO (>45 mg/mL)

Store Temp -20°C

Ship Temp Ambient

Description PF-3845 is an inhibitor of fatty acid amide hydrolase (FAAH). PF-3845 shows anti-allodynic effects in mice stimulated with LPS. It generates this effect without displaying any cannabinolic effects, making it a target for inflammatory pain management. When PF-3845 is used in tandem with the monoacylglycerol lipase (MAGL) inhibitor JZL184, it lessens withdrawal effects from opioid-dependent mice and produces anti-nociceptive effects without cannabimimetic side effects. Studies of PF-3845 treatment for traumatic brain injury in mice showed that PF-3845 lessened impairments found in control mice. TEST!!!!!!

Pricing and Availability

Bulk quantities available upon request

Product ID	Size	List Price
P200000	5 mg	\$99.80
P200000	25 mg	\$367.50
P200000	100 mg	\$1029.00
