The Commonwealth of Massachusetts

PRESENTED BY:

Joan B. Lovely

To the Honorable Senate and House of Representatives of the Commonwealth of Massachusetts in General Court assembled:

The undersigned legislators and/or citizens respectfully petition for the adoption of the accompanying bill:

An Act relative to insurance coverage for mammograms and breast cancer screening.

PETITION OF:

The Commonwealth of Massachusetts

In the One Hundred and Ninety-Second General Court
(2021-2022)

An Act relative to insurance coverage for mammograms and breast cancer screening.

Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same, as follows:

SECTION 1: Section 47G of chapter 175 of the General Laws, as appearing in the 2018 Official Edition, is hereby amended, in line 22, by striking the language after the word “examination” and inserting in place thereof the following language:

: (1) said benefits shall provide for: (i) a baseline mammogram for women between the ages of thirty-five and forty and for a mammogram on an annual basis for women forty years of age or older; (ii) in the case of a woman under forty years of age who has a family history of breast cancer or other breast cancer risk factors, a mammogram examination at such age and intervals as deemed medically necessary by the woman’s healthcare provider; (iii) diagnostic mammography and ultrasound evaluation of an entire breast or both breasts if the screening mammogram shows any abnormality where additional examination is deemed medically
necessary by the radiologist interpreting the screening mammogram if the patient presents with a symptom including, but not limited to, palpable lump, pain, or discharge, or if deemed clinically necessary based on prior diagnostic imaging; (iv) screening breast ultrasound or screening breast magnetic resonance imaging examination if the patient is deemed to be at increased lifetime risk for breast cancer (defined as greater than a 20% lifetime risk by established risk models) or has additional risk factors for breast cancer including, but not limited to, family history, prior personal history of breast cancer, positive genetic testing, heterogeneously or extremely dense breast tissue based on the Breast Imaging Reporting and Data System established by the American College of Radiology, or other combination of risk factors as determined by the patient’s healthcare provider; (v) a diagnostic mammogram, diagnostic breast ultrasound evaluation or breast magnetic resonance imaging scan if the patient has a history of breast cancer; (vi) magnetic resonance imaging in place of, or in addition to, a mammogram when a mammogram is unable to detect cancers due to insufficient breast tissue as ordered by a patient’s physician. Said benefits shall be exempt from any co-payment, co-insurance, deductible or dollar limit provisions in a policy or contract. Providers of healthcare services specified under this section shall be reimbursed at rates accurately reflecting the resource costs specific to each modality, including any increased resource cost.

(2) For purposes of this section, "screening mammogram" means a radiologic procedure that is provided to an asymptomatic woman for the purpose of early detection of breast cancer. This includes digital mammography and digital breast tomosynthesis. Digital breast tomosynthesis means a radiologic procedure that involves the acquisition of projection images over the stationary breast to produce cross-sectional digital images of the breast with standard two-dimensional radiographic views. Diagnostic examinations for breast cancer means a
medically necessary and appropriate examination for breast cancer to evaluate the abnormality in
the breast that is seen or suspected from a screening examination for breast cancer, detected by
another means of examination, recommended based upon prior diagnostic evaluation, or
suspected based on the medical history or family medical history of the individual.

Section 2: Section 110 of Chapter 175 of the General Laws, as appearing in the 2018
Official Edition, is hereby amended, in line 368, by striking the language after the word
“examination” and inserting in place thereof the following language:-

(1) said benefits shall provide for: (i) a baseline mammogram for women between the
ages of thirty-five and forty and for a mammogram on an annual basis for women forty years of
age or older; (ii) in the case of a woman under forty years of age who has a family history of
breast cancer or other breast cancer risk factors, a mammogram examination at such age and
intervals as deemed medically necessary by the woman’s healthcare provider; (iii) diagnostic
mammography and ultrasound evaluation of an entire breast or both breasts if the screening
mammogram shows any abnormality where additional examination is deemed medically
necessary by the radiologist interpreting the screening mammogram if the patient presents with a
symptom including, but not limited to, palpable lump, pain, or discharge, or if deemed clinically
necessary based on prior diagnostic imaging; (iv) screening breast ultrasound or screening breast
magnetic resonance imaging examination if the patient is deemed to be at increased lifetime risk
for breast cancer (defined as greater than a 20% lifetime risk by established risk models) or has
additional risk factors for breast cancer including, but not limited to, family history, prior
personal history of breast cancer, positive genetic testing, heterogeneously or extremely dense
breast tissue based on the Breast Imaging Reporting and Data System established by the
American College of Radiology, or other combination of risk factors as determined by the
patient’s healthcare provider; (v) a diagnostic mammogram, diagnostic breast ultrasound
evaluation or breast magnetic resonance imaging scan if the patient has a history of breast
cancer; (vi) magnetic resonance imaging in place of, or in addition to, a mammogram when a
mammogram is unable to detect cancers due to insufficient breast tissue as ordered by a patient’s
physician. Said benefits shall be exempt from any co-payment, co-insurance, deductible or dollar
limit provisions in a policy or contract. Providers of healthcare services specified under this
section shall be reimbursed at rates accurately reflecting the resource costs specific to each
modality, including any increased resource cost.

(2) For purposes of this section, "screening mammogram" means a radiologic procedure
that is provided to an asymptomatic woman for the purpose of early detection of breast cancer.
This includes digital mammography and digital breast tomosynthesis. Digital breast
tomosynthesis means a radiologic procedure that involves the acquisition of projection images
over the stationary breast to produce cross-sectional digital images of the breast with standard
two-dimensional radiographic views. Diagnostic examinations for breast cancer means a
medically necessary and appropriate examination for breast cancer to evaluate the abnormality in
the breast that is seen or suspected from a screening examination for breast cancer, detected by
another means of examination, recommended based upon prior diagnostic evaluation, or
suspected based on the medical history or family medical history of the individual.

Section 3: Section 8J of Chapter 176A of the General Laws, as appearing in the 2018
Official Edition, is hereby amended, in line 13, by striking the language after the word
“examination” and inserting in place thereof the following language:-
s (1) said benefits shall provide for: (i) a baseline mammogram for women between the ages of thirty-five and forty and for a mammogram on an annual basis for women forty years of age or older; (ii) in the case of a woman under forty years of age who has a family history of breast cancer or other breast cancer risk factors, a mammogram examination at such age and intervals as deemed medically necessary by the woman’s healthcare provider; (iii) diagnostic mammography and ultrasound evaluation of an entire breast or both breasts if the screening mammogram shows any abnormality where additional examination is deemed medically necessary by the radiologist interpreting the screening mammogram if the patient presents with a symptom including, but not limited to, palpable lump, pain, or discharge, or if deemed clinically necessary based on prior diagnostic imaging; (iv) screening breast ultrasound or screening breast magnetic resonance imaging examination if the patient is deemed to be at increased lifetime risk for breast cancer (defined as greater than a 20% lifetime risk by established risk models) or has additional risk factors for breast cancer including, but not limited to, family history, prior personal history of breast cancer, positive genetic testing, heterogeneously or extremely dense breast tissue based on the Breast Imaging Reporting and Data System established by the American College of Radiology, or other combination of risk factors as determined by the patient’s healthcare provider; (v) a diagnostic mammogram, diagnostic breast ultrasound evaluation or breast magnetic resonance imaging scan if the patient has a history of breast cancer; (vi) magnetic resonance imaging in place of, or in addition to, a mammogram when a mammogram is unable to detect cancers due to insufficient breast tissue as ordered by a patient’s physician. Said benefits shall be exempt from any co-payment, co-insurance, deductible or dollar limit provisions in a policy or contract. Providers of healthcare services specified under this
(2) For purposes of this section, "screening mammogram" means a radiologic procedure that is provided to an asymptomatic woman for the purpose of early detection of breast cancer. This includes digital mammography and digital breast tomosynthesis. Digital breast tomosynthesis means a radiologic procedure that involves the acquisition of projection images over the stationary breast to produce cross-sectional digital images of the breast with standard two-dimensional radiographic views.
