Comments/Special Instructions

Allergen Testing Options:
2-day standard TAT or 1-day RUSH option
Gluten (5 - 80 ppm) Egg, Milk, Soy, Peanut (2.5 - 25 ppm)
<small>*Other allergens also available - Please call with inquiries</small>

Considerations for allergen testing:

1. **SWABS** must be tested within 24 hours of collection. Arrange courier service the **SAME** day the swab is taken. Specific swabs for allergen testing are required and available for delivery. Wetting agent for surface sampling will also be provided and is dependent on specific allergen (gluten = ethanol solution, others = extraction solution). One swab per allergen is required.
2. Concentrated food additives, colors and flavors may cause interference. Validation on specific matrices available. Hydrolyzed and fermented proteins (i.e. soy sauce, probiotics) should not be tested.
3. Minimum sample size for food products and ingredients is 10 grams.
