Insulated Tray & Cover

Application Solar

The Solar Insulated Tray System is designed for facilities that require the maximum flexibility of a fully insulated round plate server. Full thermal insulation between all seven compartments allows trays to be individually suspended without major temperature variation. The Solar model is the only round plate server which allows the option of an internal entrée dome cover. Solar's low profile rests only 1.625" above table surface.

Gemini

The Gemini Tray System offers the most efficient sized server on the market at a surprisingly low cost, without cutting corners on heat retention or serving space. This versatile tray provides partial or full cover protection, portion control dishware, and room for even the most generous menu selection.

Gemini servers stack securely making this system ideal for both in-house and satellite serving operations. It's compact size conserves tray make-up space.

Ultima

The Ultima Tray System offers an appealing meal presentation, combined with exceptional strength, durability and temperature retention. Ultima is designed to project the elegance of traditional round plate dining while providing superior flexibility and efficiency.

Ultima's fully compartmentalized servers and covers keep food temperature just right; and its rugged, one-piece blow-molded design is exceptionally durable under even the toughest applications.

Omni

Seamless construction that withstands the toughest handling and transportation requirements has earned Omni its reputation as "The Slammer." You can drop it, smack it, stomp on it and serve food in it thousands of times and it will always maintain hot or cold – perfect for correctional facilities, remote wings, satellite facilities, and any "Meals on Wheels" type of delivery system. When Omni servers are stacked hot over hot and cold over cold, thermal columns
