

With each question, the absolute will only have a single correct answer!

Hoàngcao.Hải - Hanoi.Vietnam – 03 June 2013

ABSTRACT

This topic is one of the questions belonging kind "forever" but still do not have any answers will be accepted.

It seems that the issue is purely about "perception" rather than by the level of knowledge or ability of our intelligence.

With hoping to bring a "other view" for people to experience and apply to the settlement of the issues that concern us, I will give one answer considered as temporary is the solution most correct, or more specifically : is the only measures to address this issues in a way entirely absolute.

One thing is certain is : even if my answer is not absolutely correct, if you or someone can prove to be a result of "more absolute" the final results will be : With each question - will absolute only one the single correct answer.

You let is to try that are : all of which are absolute in space and over time.

You can will get a wonderful faith - just like me.

INTRODUCTION

1. Why we still can not the certainly claim to this problem?
2. It from bit or bit from it?
3. Tested on actual.
4. General application.
5. References added.

Why we still can not the certainly claim to this problem?

Although the concept of Information and rules of the bit is the regulations our set out from a long time ago, but until now the nature and principles of them really is questions can not to answered, and if continue its condition like today, it will probably forever remain a topic for satisfying human desires in demand to brawling.

It is easy to see that we are not lacking in thinking ability and intelligence, even the opposite : we have too many theories, assumptions and opinion. Although that theories that differ,even opposite,but which theory also seems correct, also seems reasonable.Even if we assume that : Information was created and governance by one the Deity is also not too ridiculous.

Is it because we do not have a specific criteria and detailed, and easy to understand than one measures to solve to end for theoretical problems - with basic features is very abstract.

To be able to claim absolute for every problems,can we use the "Absolute" as criteria to determine for the field of theory?

It from bit or bit from it?

To avoid misunderstanding of the problem being addressed, should be given a specific interpretation, or than more precise is one the details definition for that matter.

According to research results and reviews by the "Absolute" measure is:

* Information is defined as : **The absorption and transmission the impact of material.**
And the bits are interpreted as : the smallest unit of matter involved in the information process.

When we have identified such a definition, will have nothing difficult to answer questions in topics related. That is a mainly difference of the Absolute view.

1. The answer is: **It does not come from bits and the bits also did not born from it.**
It is itself - it was born from the process activity of nature - because if there is no source of information dissemination, the information will not have to take over, and the bit is always available everywhere, so bit is not something that was born from it, the bit only absorb and transmission the impact from the source dispersal of information.

The definition and the analysis above is also the answer to the question: What is information? What is its relation to "Reality"?

2. With question: How to naturally (and universe in which things) "storage" and "process" information?

The most important will still be necessary to identify specific and detailed definition for "store" and "process" of the information. In this case, the answer is available in the definition of information mentioned above, "stored" that is Absorb the impact of the material, and "process" is the transmission of these effects.

3. So ,how does understanding information help us understand physics, and vice-versa?
When information is defined by the method of physics - as mentioned above - the information is a phenomenon of physics, or may say otherwise : Physics is a principle of Information.

Now the problem is: why that is the absolutely correct answer ?

Simply is : because I can not yet find any Absolutely answers more than to refute them.

Final conclusions will depend on the testing of everyone.

You please make choices: agree, reject or provide more accurate results.

Perhaps any one of us also always having all sorts of questions from all the problems of the life. And not least of which is the kind of question: any answer also seems correct way, should do not know what is that the most accurate. That is why we find it difficult to accept the absolute only one unique solution for each question.

And so we always doubt and always felt strange, mysterious or overwhelmed, even unexpected with things are inherently familiar and close to us.

That's because we can not understand the true nature - it is absolute value of things or the phenomenon - seemed that too simple. Because we often choose a concept to accept and did not use a measure to determine.

When we applied by the Absolute measures to solve the problem arises, we will not be overwhelmed with doubts or any questions, because we have choice: will only accept a solution replied must be "Absolute" and is single - must be the most specific and detailed. That means will to well-defined separation between the literary fiction and the authentic research conclusions, is currently the main reason causing the state "lost the ability to define" in all areas of science today and ofcourse is a great influence to our own - in cognitive abilities to science, and absolute trust with the conclusions of science. We are receive the same information but certainly not all people have the same feeling as same as about that information.

Have must be : we look with eyes but perceive only by soul?

Tested on actual

We let's take a look together with a relevant experience to the topic of information,the absolute views and reality of our life :

It is a story about the sad information and happy information.

It is easy to see the true nature of them is: they inform to us results of the problem with characteristics is "win" or "lost" - from the viewpoint of each individually. And so the "win or lost" that would make sense as "happy or sad" to our, if analyzed in the biological anatomy of our feelings because the brain will secrete a type of substance (temporarily called an "happy-sad" micronutrient) and constitutes what is called the feeling "happy or sad" that - it is not wrong, but that would be formed in our opinion : feeling " happy or sad " of human or even other creatures is entirely dependent on the type of substance "happy-sad" above

- we will not be able to the identify exact for concept "happy or sad" of the specific individual or different species.

Because : the result of the Absolute measures that is : "happy or sad" is the convention on the status of activity of the brain.In fact, there are some places people are delighted on funerals, while in other places the funeral is always a gloomy atmosphere and most melancholy. And many other examples....

So the viewpoint is "win or lost" or the "happy-sad" micronutrient to decided for feeling "sad or happy" our?

General application

Also as similar with all the problems related to information or theoretical issues.If we not yet to identified the absolute nature of the problem to be solved,we will not be able to answer specific and detailed questions problems arising from that.

Lighting, sound, or any natural phenomenon which we know or do not know, while still hiding many mysteries - it is the true nature, the Absolute nature of them.

We was to admit to the dark Matter and Antimatter while we can not identify to them, probably not because we lack ability but because we have not identified the true nature - the absolute nature - for origin of their, that is material.

It is also a serious problem in all other fields of physics in particular and science in general.

Absolute viewpoint means : do not accept the type of interpretation "although results vary but everyone looks right" - it is not enough and of course is not completely authentic, is not absolute.

Unfortunately, the fundamentals of physics in particular present and Science in general is currently too many conclusions - not absolute - such as occur subsequently situation: who is believed to be correct and still not true, but those who were believed to be false is also not entirely wrong, although there arXiv but should still be required to viXra that we seem to be still in a state of "too redundant but also insufficient".

This problem can be cause of trend to find answers for all problems in life at the Paranormal sacred place - as a permanent always hunch in the human mind will appearance when we desperately (that hunch was a form of compressed information was stored from the time of our ancestors) - God will help!

Even so, there are still problem in front of us : How are we must understand the will of God like? Do we was really know our God?

God is Absolute?
