

i to the bit to it to the bit to the i

Consciousness is a sphere of universal Schwarzschild radius (ranging from zero to infinity) with a central cosmological constant of the conscience or the singularity or the soul or the absolute (i), Universe is an iSphere. This simple universal truth can also be mathematically expressed as,  $zero = i = infinity$ , which I have detailed in the essay *Conscience is the cosmological constant*, which can be found at <http://www.fqxi.org/community/forum/topic/1280>.

Relative reality springs forth from the absolute state of i via the mechanism of desire (bits) and manifestation (it). Let us consider a real world example to understand this mechanism, a fully constructed house we currently live in. If we were to ask the question if the house is real or not, this question in itself is not complete as it does not take in to account from when to when? For the sake of simplicity, let's ask the question again, if the house is real or not right now? Then we have an answer yes, it is real as we are living in it and can see and feel its components. Now let's rephrase the question, if the house is real or not before it was constructed and after its plans were drawn? The answer is no, the house is not real, but the idea or the bits or the information of it is real. Now again let's rephrase the question, if the house is real or not before even the plan existed or the desire for a house existed? The answer is no, the house is not real, the idea or the bits or the information about the house is not real until the desire for a house came forth. Now what is the source of this desire? Is the reality that existed all along, without this source or i neither the "bit" nor the "it" exist. There can be no relativity without the absolute. Relative reality which the scientific community is trying to understand and postulate in theories is time and space bound. Absolute truth or i is the source of the space-time itself.

We humans as sentient relative beings are capable of time travel with our minds. We can go backwards till the point where it all began as bits and what it condense and materialize as we see it now. We can also go forward till the point where it will dissolve to bits and to the nothingness. There is also one another thing we are capable of, realizing that we are the one who is omnipresent, omniscient, and omnipotent. Imagine being as an intelligent turtle on the beach and observing a kid building a sand castle on the beach, playing with it for some time and breaking it down and walking away. Process or plan of building can be referred to the bits, castle can be referred to the it and the kid is i. Now try and explain what you saw to another intelligent turtle that came by, which did not see the kid or his play but only the parts of the broken castle and think that they are fundamental and real by themselves. The only way you can prove that the kid existed and he was the one who built the castle, is by being the kid yourself and showing the other intelligent turtle on "how to" (bits) build a castle (it) out of the sand.

In science we call this i or the conscience the relative observer. This relative observer can be super positioned to become the absolute observer, who is also the creator or god as per religion. To think one self as a relative observer is one's choice and results in relative reality, to know one to be the absolute observer is realization or enlightenment or eternal bliss.

I put forth the bits and materialized it as you can read it now. It can be broken down in to bits, transmitted across the wire and consumed by i again in all of us, and hence the title "I to the bit to the it to the bit to the I".

Love,  
Sridattadev.
