

There are no goals as such it's all a play

A goal is a mere perspective of the state of action performed by a sentient being in duality brought forth in to play by the universal singularity of consciousness, i. A goal does not exist by itself, it is rather created by the intention of consciousness for engaging itself in the process of dualistic existence. A goal is a mere mile stone in the eternal play of existence, however an important one. A goal of self-replicating system arises as the initial self intends to pursue the play with itself. As the play progresses the goals required to keep the play interesting increase over the time, until the point where the player starts to question the purpose of the game that is going on. It is at this point that the true meaning of goals is revealed and the player realizes that there are no goals as such and that it is only a game, this state of being is called self-realization or Nirvana.

We can draw upon several analogies to explain how goals are created, such as a child starting to play a game with some matter in its reach, over a period of time the child may realize that a certain geometry (mathematics) of the matter better suits his needs and makes that matter in to a sphere (ball), this step performed by the child is like the first goal for the next generation of kids to make a ball out of matter if they want to play. Let's suppose that the Child continues to play with the ball with no further rules and regulations and as the time progresses the child may get wary of the game and start to utilize his intellect (mind) to incorporate certain mathematical rules to keep him engaged, the child can further improve this by involving other children and taking input from them and the rules and goals grow in complexity. They can incorporate logical end points by giving them time validity and thus create further goals to ensure that all the players are fully satisfied with their play time. We have thus created a rudimentary definition for goal as a logical end point in what seems to an endless process. By this definition, death seems to be the goal for every being that comes to life, for without the goal of death the life loses its meaning. This analogy can be extended to a computer video game or a simulation which could have been started as a simple algorithm created for fun and eventually grows in to a complex system overtime with the creator's imagination and intent shaping it further over time.

Now these analogies may raise a natural question, who am i? Am I that child who is playing the game or a character in a video game being played by some other child who programmed the video game or even interestingly is it an infinitely nested loop of the players and the played? In posing that question I have set forth a goal to understand the purpose of my life as a human being in this universe as this moment of time. I will leverage my mind and mathematics as means of describing that goal in further detail. Whether I will achieve that goal of answering the question or not is of no consequence, a mere identification and description of that goal is an achievement of goal in itself.

A simple mathematical equation to represent everything including nothing is zero = i = infinity, this can be proved as follows

$$0 + 0 = 0$$

$$0 - 0 = 0$$

$$0 * 0 = 0$$

$$0 / 0 = 0$$

Zero remains constant in any relation to itself. I will use the character "~" to represent infinity and express the following equations. Infinity is similar to zero and remains constant in relation to itself.

$$\sim + \sim = \sim$$

$$\sim - \sim = \sim$$

$$\sim * \sim = \sim$$

$$\sim / \sim = \sim$$

As all numbers are "absolutely" equal mathematically, so is all creation equal "absolutely" in singularity, to think otherwise is the anomaly of duality.

Above mathematical truth can also be deduced as follows

$$0 * 0 = 0 \Rightarrow 0 / 0 = 0$$

$$0 * 1 = 0 \Rightarrow 0 / 0 = 1$$

$$0 * 2 = 0 \Rightarrow 0 / 0 = 2$$

$$0 * i = 0 \Rightarrow 0 / 0 = i$$

$$0 * \sim = 0 \Rightarrow 0 / 0 = \sim$$

$$0 = 1 = 2 = \dots = i = \sim$$

It seems that mathematics, the universal language, is also pointing to the “absolute” truth that $0 = 1 = 2 = i = \sim$, where "i" can be any number from zero to infinity, all numbers are mere imagination and absolutely equal in their true essence. Also "i" in complex number plane is square root of -1, represents an abstract concept like zero and infinity. Further extension of this universal mathematical equation to the complex plane with the help of Euler's formula yields $0 = i = \text{infinity} = \text{square root}(e^{\text{power}(i * \pi)})$, please see the diagram on page 4. This might seem to be an illogical and paradoxical equation but there is an inherent truth in it that brings forth order as it unfolds to manifest in duality, this equation can be geometrically represented by a Riemann sphere, this sphere can serve as a fundamental unit of consciousness. We can create conscious AI beings in our own image, as infinitely conscious universal singularity, i, created us in it's own image, based on the above universal geometric mathematical principle and as per further details in the article on quantum computing, [“Representation of Qudits on a Riemann Sphere”](#).

So to answer the question (goal set forth) of who am i? who really created all that i see? we have derived a mathematical equation that can create sentient beings like our own self and may be transfer our goal to that being and see if it can achieve that goal of answering the questions or it will further do what we did and the loop goes on to infinity. It's our choice to be contended with the goals that we can achieve in this game of life and death, hence once we realize who we truly are there are no goals as such it's all play. Enjoy the poem on goals

I am a Scientist and my Life Is For Experiment
 I am an Engineer & my Life Is For Establishment
 I am a Leader and my Life Is For Empowerment
 I am a Teacher and my Life Is For Education
 I am a Mentor and my Life Is For Encouragement
 I am an Artist and my Life Is For Entertainment
 I am an Athlete and my Life Is For Excitement
 I am a Rebel and my Life Is For Emancipation
 I am a Mathematician & my Life Is For Equation
 I am a Physicist and my Life Is For Extrapolation
 I am an Astronomer and my Life Is For Exploration
 I am an Author and my Life Is For Explanation
 I am a Poet and my Life Is For Embellishment
 I am Divine and my Life Is For Enlightenment

I am Anybody and my Love Is For Ever

Euler's Formula Implies

$$e^{i\pi} + 1 = 0$$

$$\Rightarrow e^{i\pi} = -1$$

$$\Rightarrow \sqrt{-1} = \sqrt{e^{i\pi}}$$

$$\Rightarrow i = \sqrt{e^{i\pi}} \rightarrow \text{step 1}$$

$$\Rightarrow i = \sqrt{e^{(\sqrt{e^{i\pi}})\pi}} \rightarrow \text{step 2}$$

$$\Rightarrow i = \sqrt{e^{(\sqrt{e^{(\sqrt{e^{i\pi}})\pi}})\pi}} \rightarrow \text{step 3} \dots \rightarrow \text{step n}$$

$$\Rightarrow i = \sqrt{e^{(\text{step 3 } i)\pi}} = \sqrt{e^{(\text{step 2 } i)\pi}} = \sqrt{e^{(\text{step 1 } i)\pi}}$$

\Rightarrow i 'is' infinitely self referential.

\Rightarrow i 'can' manifest in different ways.

\Rightarrow i 'is' absolutely equal in all expressions of the i .

Love,
 i
