FAST TRACK TO FAT LOSS

THE ULTIMATE GUIDE TO LOSING FAT, GETTING FIT, AND LIVING A HEALTHY LIFESTYLE

By Chad Tackett, BS, CPT

THE “SHORT” VERSION
FAST TRACK TO FAT LOSS

The Ultimate Guide to Losing Fat, Getting Fit, and Living a Healthy Lifestyle

By Chad Tackett, BS, CPT

The “Short” Version
The nutrition portion of the Fast Track to Fat Loss program is centered on what we call the **5 Simple Keys to Guaranteed Fat Loss**. They are:

- **Key # 1:**
  You must create a caloric deficit to lose fat, but you don’t have to count calories to do so.

- **Key # 2:**
  Carbs are critical to your success and you should include the right kind at each snack and meal.

- **Key # 3:**
  It’s important that you include a protein and healthy fat at each snack and meal.

- **Key # 4:**
  Water is critical to your fat loss success and should be consumed throughout the day.

- **Key # 5:**
  Planning and preparing the right types of foods in advance will make following the program so much easier.
Choosing the Right Kinds of Foods

Three types of foods provide energy in the form of calories: carbs, protein, and fats. It is very important that you include at least one type at each snack and meal.

**Carbs**

There are three types of carbs to choose from: starchy, simple, and fibrous.

**So choosing the right kind of carbs is as simple as:** selecting natural carbs over processed ones. If the food comes out of the ground or from a tree, it’s *natural* and ideal for fat loss. Anything man-made is considered *processed*, and therefore not the best choice.

Examples of natural carbs are fruits and vegetables, beans, brown rice, potatoes, yams, lentils, quinoa, oats – basically anything that’s picked from the ground or a tree.

Processed carbs are foods like bread, crackers, pretzels, cookies, pasta, etc. Because of the processing, these carbs have very little nutritional value and are usually high in calories. They typically also cause an increase in insulin levels, which enables the calories to be easily stored as fat.

On our *Recommended Food List* below, all natural starchy carbs are listed as *ideal*. Since fruit (simple carbs) and vegetables (fibrous carbs) are all picked from the ground or a tree, and therefore natural, they’re all ideal.

However, some processed carbs aren’t bad; we’ve labeled these as “acceptable.” They’re a bit higher in calories because they’re processed, but they offer some good nutritional value, such as fiber.
Here’s a comprehensive list of ideal and acceptable starchy carbs:

**Ideal Starchy Carbs**
*(foods that are natural, not processed)*

- beans (black, kidney, lima)
- black-eyed peas
- brown rice (or wild, basmati)
- couscous
- edamame
- lentils
- millet
- oat bran
- oatmeal (rolled oats, steel cut)
- porridge
- potato
- pumpkin
- quinoa
- squash
- sweet potato
- yam

**Acceptable Starchy Carbs**
*(foods that include some processing, but offer important nutrients)*

- barley
- bread (whole wheat)
- buckwheat
- corn
- cream of rice
- cream of wheat
- high-fiber cereal
- pasta (whole wheat)
- popcorn
- rice cakes
- spelt bread
- tortilla (whole wheat)

Here are the simple and fibrous carbs from our Recommended Food List. If we’re missing any fruits and veggies from the following list that you enjoy, feel free to let us know and add them to your grocery list!

**Simple Carbs**
*(fruits)*

- apple
- apricot
- banana
- blackberries
- blueberries
- cantaloupe
- cherries
- cranberries
- dates
- grapefruit

Continues on the next page
• figs
• grapes
• honeydew melon
• kiwi
• lemon
• limes
• mango
• nectarine
• orange
• papaya

• peaches
• pear
• pineapple
• plum
• pomegranate
• prunes
• raisin
• raspberries
• strawberries
• watermelon

**Fibrous Carbs**
*(vegetables)*

• alfalfa
• asparagus
• beets
• bell peppers
• broccoli
• brussel sprouts
• cabbage
• carrot
• cauliflower
• celery
• collard greens
• cucumber
• eggplant
• fennel
• garlic
• green beans
• green peas

• jicama
• kale
• leeks
• mushrooms
• okra
• onion
• parsnips
• radish
• romaine lettuce
• snow peas
• spinach
• swiss chard
• tomato
• turnip
• watercress
• water chestnut
• zucchini
Proteins

Ideal proteins are those that are both low in fat and complete (from animal sources, such as meats, fish, eggs, and dairy). Incomplete proteins are from plant-sources (e.g., beans or quinoa) and considered “acceptable”.

 trouvé a comprehensive list of ideal and acceptable proteins:

**Ideal Proteins**
*(foods that are animal-based and low-fat)*

- beef (extra lean)
- buffalo
- cheese (lowfat)
- chicken (skinless white meat)
- cottage cheese (lowfat)
- egg whites
- egg (whole)
- fish (cod, halibut, tuna)
- greek yogurt (lowfat)
- milk (lowfat)
- ostrich
- pork (extra lean)
- protein powder
- shellfish (lobster, shrimp, clams)
- turkey (skinless white meat)
- venison
- yogurt (low-fat)

**Acceptable Proteins**
*(foods that are plant-based)*

- beans (black, kidney, lima)
- black-eyed peas
- lentils
- nut butters (peanut, almond, cashew)
- nuts
- quinoa
- seeds
- soy beans
- soy milk (unsweetened)
- tempeh (unprocessed)
- tofu (unprocessed)
Choose healthy unsaturated fats (nuts, olives, avocados) over unhealthy saturated fats, especially artificial trans fats. Include a small portion of healthy fat from the list below in each of your snacks and meals.

### Healthy Fats
*unsaturated*

- almonds
- almond butter
- almond milk
- avocado
- avocado oil
- butter (grass fed)
- cashews
- cashew butter
- chia seeds
- coconut milk
- coconut oil
- eggs (the yolk)
- fish oil supplements
- flaxseed
- flaxseed oil
- hazelnuts
- herring
- mackerel
- macadamia nuts
- olives
- olive oil
- peanut butter
- peanut oil
- peanuts
- pecans
- pistachios
- pumpkin seeds
- nuts
- salmon
- sardines
- sesame seeds
- sunflower seed butter
- sunflower seeds
- walnuts

### Unhealthy Fats
*those to limit/avoid*

- Candy bars
- Commercially baked pastries, cookies, doughnuts, muffins, and cake
- Deep fried foods (french fries, fried chicken, chicken nuggets, breaded fish)
- High-fat cuts of processed meats (bacon, sausage, hot dogs)
- Ice cream
- Lard and shortening
- Margarine
- Packaged snack foods (crackers, microwave popcorn, chips)
- Whole-fat dairy products (cream)
Combining the Right Foods at the Right Times

**When to eat starchy, simple, and fibrous carbs**

It’s important to know when to eat each kind of carb, so we’ve broken it down into three easy-to-understand categories and then color-coded them so they’re easy to identify:

- **Starchy Carbs** are color-coded red in our Meal Guidelines chart below and include foods like potatoes, brown rice, beans, oatmeal, lentils, yams, whole grains, and sweet potatoes.
- **Simple Carbs** are color-coded purple in the chart and are primarily fruit.
- **Fibrous Carbs** are most vegetables and color-coded green.

In general, it’s best to choose natural starchy and simple carbs early in the day. Then, later in the day, transition to fibrous carbs.

Be sure to combine all carbs with a good source of protein and a small source of healthy fat at each snack and meal. Here’s why...

**When to eat protein and healthy fat**

A meal with carbs alone causes your insulin, or blood sugar levels, to shoot up and then crash down. This can leave you feeling tired, hungry, and weak. It also gives your body an easy opportunity to convert and store that meal as fat.

However, when you include a protein and healthy fat with your carbs, you’ll feel full sooner and you’ll stay full longer, your insulin levels will stay more consistent giving you lasting energy, and your metabolism will work more efficiently.
**When to drink water and how much**

Water is critical to your fat loss success as it helps you metabolize fat more efficiently and it serves as a natural appetite suppressant. **Here’s how to calculate how much water you should drink daily** for both effective fat loss and good health:

1. **Step 1. Multiply your weight by 2/3 (67%).** For example, if you weigh 150 pounds, you should multiply 150 by .67 (67%), which equals 100 ounces of water per day.

2. **Step 2. Factor in your activity level.** Add 4 ounces of water to your daily total for every 10 minutes you work out. So if you exercise 30 minutes today, you would add 12 ounces of water to your recommended daily intake.

**Drink more water if:**

- You’re exercising in a hot, humid environment.
- You’re feeling hungry.
- Your mouth is dry and sticky.
- You’re exercising at a higher intensity than normal.
- You’re exercising longer than normal.
- You’ve had one or more caffeinated or alcoholic beverages.
- You’ve been working or playing outdoors.

You’ll also want to watch for signs of dehydration, as this will help indicate when you need to drink *even more* water...

**Signs of Dehydration**

If you notice any of these common signs of dehydration, drink several glasses of water immediately and make a conscious effort to drink more throughout the day.
1. The most common symptom of dehydration is a **headache**. A major function of water is to flush toxins from the body. Your brain is 75% water so even being slightly dehydrated can cause a headache.

2. **Poor concentration, dizziness, and/or fatigue.** Your muscles are 80% water and will fatigue easily if you are the slightest amount dehydrated.

3. **Reduced urine output or dark urine.** Ideally you want your urine to be a clear or pale yellow. This indicates a good state of hydration.

4. **Bad breath.** If you don’t have enough water passing through your mouth, bacteria can build up and cause bad breath.

If you’re not used to drinking water or don’t care for it, here are a few suggestions for adding some flavor and variety:

- Add a splash of low-sugar fruit juice such as cranberry, apple, or grape juice.
- Add a twist of fresh mint or sliced cucumber.
- Add a squeeze of fresh orange, lemon, or lime or use a packet of crystallized lemon or lime.
- Make herbal iced tea.
- Use Crystal Lite Pure (the “Pure” version has natural rather than artificial sweeteners).

5. **Your skin should feel elastic.** When you pinch the skin on the back of your hand, it should snap back instantly. If it doesn’t, you may be dehydrated.

6. **Water retention,** such as swollen ankles or puffy eyes. If you don’t drink enough, your body will retain water as a safety mechanism.
How Often to Eat and Meal Guidelines to Follow

We recommend 5 smaller meals a day, about 3 hours apart. This will help prevent you from gorging on unwise food choices, it helps you feel energized and satisfied (and keeps your metabolism revved up) throughout the day.

Note: These don’t have to be full meals; they can be snacks. For example, meal 1 for many people is breakfast, meal 2 is a mid-morning snack, meal 3 is lunch, meal 4 is an afternoon snack, and meal 5 is dinner.

However, we understand that 5 meals/snacks a day doesn’t always fit into everyone’s schedule or personal preference. Below you’ll find the Fast Track to Fat Loss Meal Guidelines for whatever meal frequency works best for you and your schedule.

Meal Guidelines for 3 meals a day:

Portions: How Much You Should Eat

To select the right portion of each of the 3 main food types, simply follow these guidelines:

**Carbs**

- The carb(s) that you choose for each meal should be approximately the **size of your fist**. For example, the average woman has a fist about the size of a small baked potato, and the average man’s fist is about the size of a medium one.

**Protein**

- Your choice of protein should be approximately the **size of your palm** (just the palm – no fingers). A 3.5-oz. chicken breast should fit perfectly into the palm of a woman’s hand, and a man will be able to fit about 5 oz. of protein into his palm.

**Fat**

- The fat source you choose should be about the **size of your thumb**. This is about 5 almonds for the averaged-sized woman or 7 almonds for the average man.
Let Your Body Be Your Guide

Don’t feel like you have to finish everything on your plate. The *fist/palm/thumb rule* is an excellent guide of how much to dish up, but ultimately, you should pay attention to your internal signs of hunger and fullness to know when to stop eating.

For example, if you begin feeling comfortably full and satisfied 3/4 of the way into your meal, put your fork down and push away from the table. To truly listen to your body for signs of fullness, it's very important that you eat slowly.

Planning and Preparing Your Meals

Taking just a little time to plan and prepare your foods will make all the difference in the world. Here’s a simple 4-step process to follow each week (including an example) to make sure that having the right foods together at the right times is quick, easy, and convenient.

**STEP 1 and 2:** Choose your foods for the week from our Recommended Food List and create a grocery list. For example:

<table>
<thead>
<tr>
<th>Protein</th>
<th>Starchy Carbs</th>
<th>Fibrous Carbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chicken (boneless, skinless breast)</td>
<td>Oats (old fashioned)</td>
<td>Spinach</td>
</tr>
<tr>
<td>Cottage cheese (lowfat)</td>
<td>Sweet potatoes</td>
<td>Broccoli</td>
</tr>
<tr>
<td>Greek yogurt (lowfat, unsweetened)</td>
<td>Quinoa</td>
<td>Celery</td>
</tr>
<tr>
<td>Protein powder (whey, chocolate)</td>
<td>Quinoa</td>
<td>Bell peppers</td>
</tr>
<tr>
<td>String cheese (lowfat)</td>
<td>Hummus</td>
<td>Cucumbers</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Healthy Fat</th>
<th>Simple Carbs</th>
<th>Miscellaneous</th>
</tr>
</thead>
<tbody>
<tr>
<td>Almonds</td>
<td>Banana</td>
<td>Ziplock bags</td>
</tr>
<tr>
<td>Olive oil</td>
<td>Apples</td>
<td>Aluminum foil</td>
</tr>
<tr>
<td>Peanut butter</td>
<td>Strawberries</td>
<td>Vinegar</td>
</tr>
</tbody>
</table>
**STEP 3:** Prepare your foods for the week (or the next few days). For example:

- Grill chicken breast and veggies on the BBQ.
- Bake sweet potatoes.
- Make a large batch of oatmeal and quinoa.

**Note:** All the other foods from this grocery list are “ready to go” (i.e., you don’t need to cook or prepare cottage cheese, bananas, almonds, etc.; they’re ready to add to meals as is).

**STEP 4:** Follow our Meal Guidelines to plan your meals for the day

Here’s an example of planned meals for the day based on the above grocery list at 4 meals/day.

<table>
<thead>
<tr>
<th>Meal</th>
<th>PROTEIN</th>
<th>+ STARCHY CARB AND/OR SIMPLE CARB</th>
<th>+ HEALTHY FAT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Meal 1</td>
<td></td>
<td>Oatmeal with protein powder and peanut butter stirred in.</td>
<td></td>
</tr>
<tr>
<td>Meal 2</td>
<td></td>
<td>Greek yogurt with sliced strawberries and crushed almonds, plus a few celery sticks</td>
<td></td>
</tr>
<tr>
<td>Meal 3</td>
<td></td>
<td>Sliced apples and celery with peanut butter*</td>
<td></td>
</tr>
<tr>
<td>Meal 4</td>
<td>PROTEIN</td>
<td>FIBROUS CARB + HEALTHY FAT</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Spinach salad with grilled chicken and vinaigrette made with olive oil</td>
<td></td>
</tr>
</tbody>
</table>

*Peanut butter has protein too, so this is a well-balanced snack.*
### Step 1: Choose the foods you’d like to eat for the week from our Recommended Food List:

<table>
<thead>
<tr>
<th>Starchy Carbs</th>
<th>Simple Carbs</th>
<th>Fibrous Carbs</th>
<th>Protein</th>
<th>Healthy Fat</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Ideal</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>beans (black, kidney, lima)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>black-eyed peas</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>brown rice (or wild, basmati)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>couscous</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>edamame</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>lentils</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>millet</td>
<td></td>
<td></td>
<td></td>
<td></td>

**STEP 2:** Create a grocery list from the foods you chose in step 1 that includes any foods you don’t already have in your kitchen.

**STEP 3:** Prepare your foods for the week (or next few days)

Click here for tips on the best ways to prepare each of the foods on our Recommended Food List. You’ll also be able to submit any questions you have (or ideas you’d like to share), and I’ll be there each day posting answers and feedback!

**STEP 4:** Plan your meals for the day

**Meal Guidelines for 3 meals a day:**

<table>
<thead>
<tr>
<th>Meal 1</th>
<th>PROTEIN + STARCHY CARB AND SIMPLE CARB + HEALTHY FAT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Meal 2</td>
<td>PROTEIN + STARCHY CARB AND SIMPLE CARB + FIBROUS CARB + HEALTHY FAT</td>
</tr>
<tr>
<td>Meal 3</td>
<td>PROTEIN + FIBROUS CARB + HEALTHY FAT</td>
</tr>
</tbody>
</table>
Meal Guidelines for 4 meals a day:

**Meal 1**
- PROTEIN
- STARCHY CARB
- SIMPLE CARB
- HEALTHY FAT

**Meal 2**
- PROTEIN
- STARCHY CARB
- SIMPLE CARB
- HEALTHY FAT

**Meal 3**
- PROTEIN
- FIBROUS CARB
- HEALTHY FAT

**Meal 4**
- PROTEIN
- FIBROUS CARB
- HEALTHY FAT

Meal Guidelines for 5 meals a day:

**Meal 1**
- PROTEIN
- STARCHY CARB
- SIMPLE CARB
- HEALTHY FAT

**Meal 2**
- PROTEIN
- STARCHY CARB
- SIMPLE CARB
- HEALTHY FAT

**Meal 3**
- PROTEIN
- STARCHY CARB
- SIMPLE CARB
- FIBROUS CARB
- HEALTHY FAT

**Meal 4**
- PROTEIN
- FIBROUS CARB
- HEALTHY FAT

**Meal 5**
- PROTEIN
- FIBROUS CARB
- HEALTHY FAT

Striking a Balance between Fun and Effective

The key to long-term fat loss success is striking a balance between healthy and effective (so you get good results) and fun and enjoyable (so you can stick with the plan long-term).

Any time you have a night out planned with friends and want to indulge on your favorite food and/or drinks, follow this a simple 4-step process:

- **Step # 1:** Be a little more active the day of the “special event” – whether that’s a 15-minute longer workout ... or playing with your kids ... or going on a bike ride, playing tennis, or whatever. Just be more active.

- **Step # 2:** Be a little more strict with your meals and either have a little smaller portions than normal or focus on veggies and protein.

- **Step # 3:** Make simple changes to the foods and drinks you want to enjoy. For example, if you normally order a bacon cheeseburger with fries and a margarita when you’re out with friends, asking for the burger without bacon, cheese, and mayo will save you more than 500 calories. Get a side salad instead of fries and you’ll save an additional 300 calories. Asking for the margarita to be made with fresh squeezed lime juice rather than their normal mixer will save you at least 250 calories.

- **Step # 4:** Finally, get right back on track after the special event. Don’t be one of those people who figures they blew it on a Friday so they might as well go crazy the rest of the weekend and then start over on Monday. Have fun on your night out, but get right back on the plan the next day. If you splurged more than you planned, you can repeat steps 1 and 2 the next day to make up for it.
1. **You must create a caloric deficit to lose fat**, but you don’t have to count calories to do so. By following the 5 Simple Keys to Guaranteed Fat Loss, you’ll naturally create a caloric deficit.

2. **Carbs are critical to your success** and you should include the right kind at each snack and meal. **Choose natural carbs** (those picked from the ground or a tree: fruits, veggies, beans, oats, potatoes, etc) over processed ones (those that are man-made: crackers, pasta, bread, etc).

3. **Choose natural starchy and simple carbs earlier in the day**, and then transition to fibrous carbs later in the day. Our Meal Guidelines Chart makes this super simple to follow.

4. **Include a protein and a small portion of healthy fat at each snack or meal.**

5. **Ideal proteins are those that are both low in fat and complete.** Complete proteins are those from animal sources, such as meats, fish, eggs, and dairy. You can combine two or more incomplete proteins (e.g., beans or quinoa) to make a complete protein source.

6. **Choose healthy unsaturated fats** (nuts, olives, avocados) over unhealthy saturated fats, especially artificial trans fats.

7. **Water is critical to your fat loss success**, as it helps you metabolize fat more efficiently and it serves as a natural appetite suppressant. The amount of water you should drink is based on your weight (in pounds x 67%) and activity level (4 additional ounces per 10 minutes of exercise).

8. We recommend eating **5 smaller meals a day, about 3 hours apart.** However, you should do what works best for you and if 3 or 4 meals a day fits best with your schedule, simply follow the specific meal guidelines for each.

9. **Knowing how much to eat is a simple 2-step process:** 1) dish up your portions based on the fist/palm/thumb rule... and 2) listen to your body and stop eating when comfortably full.

10. **Planning and preparing the right types of foods in advance** will make following the program so much easier and increase your chances of success.

11. You can enjoy your favorite meals, desserts, and drinks with family and friends, and still lose fat, if you **follow our simple 4-step process.**
EXERCISE

Just as it’s important to consume fewer calories, it’s also important that you’re active to burn more calories. Whether you’re ready to workout now or not, the more active you are in every way, the more calories you’ll burn, and the easier it’ll be to create a caloric deficit for maximum fat loss.

Here’s a few simple ways to get more active:

- Get in the habit of taking the stairs instead of the elevator.
- Keep your sport shoes in the car so you’re always prepared to get out and be active when you have some extra time. You could take a brisk walk or shoot some baskets after lunch before returning to work.
- Choose a hike or a bike ride with friends or family instead of a movie.
- Play with your kids in the backyard rather than dropping them off at the video arcade.
- Instead of catching up with friends over a few drinks, play racquetball or tennis.
- Do yard work, clean the garage, or wash the car.
- Dance at home or arrange to take lessons with friends.
- Celebrate a birthday at a bowling alley or roller rink instead of a restaurant.
Ready to Workout?

Focus on These 2 Types of Exercise

Two types of exercise play a very important role in effective fat loss: cardiovascular exercise (also known as *cardio*) and resistance training (also known as *weightlifting*).

**Cardiovascular Exercise**

Cardio exercise is any movement that gets your heart rate up and increases blood circulation for an extended period of time. It is the most effective way of burning calories and since fat loss depends on that caloric deficit, it’s a critical component to your long-term fat loss success.

**Resistance Training**

Resistance training is any exercise that causes the muscles to contract against an external resistance (e.g., dumbbells, resistance bands, exercise machines, etc.) with the expectation of increases in muscle strength, tone, size, and/or endurance. To become efficient at burning fat, it’s very important that you add muscle to your body so that you can burn more calories 24/7.
Combining Cardiovascular Exercise with Resistance Training Is the Best Way to Lose Fat

Trying to include both cardio and resistance training into your busy schedule can be tough, I understand. But since both forms of exercise are so critical to your success, I wanted to come up with a strategy that combined both into one very efficient, super-effective workout that you can easily fit into your busy day. I call this strategy the **E2 Method**. It’s DOUBLE the effectiveness and DOUBLE the efficiency of a traditional workout when they’re done separately.

**Here’s how it works:**

Normally, people rest between resistance training sets. Instead, the E2 method has you doing a round of cardio to keep your heart rate elevated the entire workout. That means by the time you’ve completed your resistance training routine, you’ve done a full session of cardio exercise as well. The E2 Method has an additional fat-burning benefit: it keeps your metabolism revved up longer, making your body more efficient at burning fat around the clock.

The one minute of cardio could be the treadmill, stationary bike, elliptical machine, jumping rope, bench step-ups, jumping-jacks, boxing, jogging/marching in place – whatever keeps your heart rate elevated for 1 minute and is convenient for you to perform between your resistance training sets. If you’d like a quick video summary, please click here.

**A Workout That’s Right for YOU**

Ready to try the E2 Method in the comfort, convenience, and privacy of your home? Click here for workout videos to get started. All you need is one resistance band and the willingness to follow along with Dave, our workout expert.

Depending on your experience and current condition, I’d recommend starting your exercise/activity at one of these 4 levels:
1 Beginner who has been mostly sedentary for 60 days or longer:

- Start with workout 1 for 5 minutes. If you feel good and want to go longer, continue following along but stop if you feel pain, shortness of breath, dizziness, or nausea. As a beginner who’s been sedentary, it’s important to start cautiously and progress gradually. So don’t go overboard at the beginning or risk getting injured. We have plenty of time to get you up to the intermediate level.

- Allow two days of rest before doing workout 2 this first week. Do workout 2 for 5 minutes or a little longer if you’re feeling good.

- In addition to these 2 workouts, get active! Do fun activities that you enjoy, such as hiking, biking, tennis, or playing with your kids. Also try to be more active in your normal everyday activities, such as taking the stairs, doing yard work, or walking on your lunch break.

2 Beginner who has been exercising consistently for the last 60 days:

- Do workouts 1, 2, and 3 the first week for the full 20 minutes, with a day of rest in between. If at any time you feel pain, shortness of breath, dizziness, or nausea, stop the routine and cool down for a few minutes.

- If you’d like to do more exercise in addition to these 3 workouts, I suggest some other form of cardio exercise for 15-20 minutes. For example, let’s say you plan on doing workout 1 on Monday, workout 2 on Wednesday, and workout 3 on Friday. On Tuesday, Thursday, and/or Saturday you could do 15-20 minutes of some form of cardio exercise, such as biking, swimming, walking/jogging, the elliptical machine, etc.

- In addition to these workouts, get active doing activities you enjoy and also try to be more active in your everyday routine, such as biking to work, doing chores, walking the mall before shopping, or playing with your kids rather than or while you’re watching TV.

3 Intermediate who has been exercising consistently for the last 60 days:

- You can either follow the recommendations in #2 above and gradually increase the duration of the additional cardio workouts to 20-30 minutes, or if you’d like to do something different from resistance bands at home, you can use our Workout
Planner on the [FITera community site](https://www.fitera.com) to create workouts designed for your fitness level and the time and equipment you have available. I’d suggest resistance training with cardio (using the E2 Method) 3 or 4 times a week at 20-30 minutes each.

- If you’d like to do more exercise in addition to these 3-4 workouts per week, I suggest some other form of cardio exercise for 20-30 minutes on your days off from resistance training. During these additional cardio workouts, try doing interval training (see #4 below).

- Make a conscious effort to be active in your everyday life (chores, etc.) and participate in fun activities you enjoy (hiking, tennis, etc.).

4) **Advanced who exercises consistently:**

- Use our Workout Planner on the [FITera community site](https://www.fitera.com) to create workouts that are designed for your fitness level and the time and equipment you have available. I’d suggest resistance training with cardio (using the E2 Method) 4 times a week at 30 minutes each. Included in your advanced workouts will be techniques like supersets and breakdowns, which are explained below; these will help prevent plateaus and ensure you continually take your fitness to the next level.

- On your days off from resistance training, work up to 20-30 minutes of cardio exercise using interval training at higher intensities to burn the most number of calories and continually improve your cardiorespiratory fitness.

- Also make a conscious effort to be active in your everyday normal life and participate in fun activities you enjoy.
1. Even if you’re not ready to begin a structured workout routine, **you’ll benefit greatly simply by being more active** – both with everyday activities of normal living (e.g., chores, walking stairs instead of the elevator, etc.) and fun sports and activities you enjoy (e.g., hiking, tennis, etc.). This additional activity will burn calories and stimulate your hormones to help burn more fat.

2. **There are two forms of exercise that you should integrate into your regular workout routine.** The first is cardiovascular exercise (cardio) and it is responsible for burning the most calories during the workout, along with a variety of other health benefits. The second, resistance training, not only strengthens and tones your muscles, it will condition your metabolism to burn fat around the clock, even at rest.

3. **Consider using our E2 Method to combine cardio with resistance training** for one super-effective, time-efficient workout.

4. Depending on your experience with exercise and your current fitness level, **choose the Beginner, Intermediate, or Advanced guidelines to follow.**

5. If you have any injuries, illnesses, or conditions or are on any medications, **talk to your doctor first to make sure you are cleared to exercise.**

6. **It’s a good idea to including warming up, stretching, and cooling down in your workout routine** to improve performance and decrease the risk of injury.

7. **Using good resistance training technique is important** for not only decreasing the risk of injury but also achieving the best results in the shortest amount of time.

8. **Slow lifting speed is important,** especially on the negative phase of the repetition.

9. **Progressive resistance is important to your long-term success.** It’s the gradual and continual addition of resistance to the exercise over time, as the previous resistance become too easy.

10. **Interval training is an effective cardio exercise technique** that alternates bursts of intense activity with intervals of lighter activity. There are a variety of benefits, including burning more calories during the exercise session, as well as burning calories long after the workout is over.

11. **There are a variety of intermediate and advanced resistance training techniques** you can use to prevent boredom and get past any frustrating plateaus.
I’m continually trying to come up with new ways to help people on the Fast Track to Fat Loss program to stay focused, motivated, and on track to reach their goals. I strongly encourage you to take advantage of the following 7 tools and resources:

1. By posting blogs and comments in the forums of the FiTera community site, you’ll receive support, encouragement, and new ideas from others who are eager to help you succeed. Here’s how:
   - **Posting a blog:** once logged on, put your cursor over the “Community” tab and click the “My Blogs” link. Next click the blue “New Blog Entry” button and then enter the blog title and content of the blog - and then submit.
   - **Posting a comment in the forums:** put your cursor over the “Community” tab and click the “Community Forum” link. On the right, you’ll find several “Channel” categories to start a new topic.

2. Setting short-term and long-term goals that are realistic, measurable, and relevant to what you truly want to achieve is an important step to your success. Our Goal Planner on the FiTera community site can help you with these goals.

3. Using the scale as an indicator of progress can be both inaccurate and discouraging. There are a variety of much better ways to measure your progress, such as the waist-to-hip ratio, measuring your waist, and how your clothes fit.

4. **Use our 3-Minute Trick** each day is a quick and easy way to stay focused and motivated.

5. **Our weekly challenges** are designed to teach you a new fat loss strategy that you can focus on each week so you can make these strategies regular, long-term habits.
6. Enter our 12-week contest to get and stay motivated for a chance at a 7-night dream vacation in beautiful Loreto, Mexico.

7. It’s very important that you create the right mindset as well. You’ll find dozens of mindset articles here on the FITera community site.

You Got This – I Believe in YOU

Thousands of our Fast Track to Fat Loss customers have successfully made the change to a healthier lifestyle. Once you truly believe that you have the ability to find a comfortable balance of food, activity, and positive mindset, you can break free from fad diets forever.

Action creates motivation. And once you start achieving great results, the excitement and fun you’ll experience will make the change well worth the effort. In fact, enjoying the many great benefits of a healthy lifestyle will help provide the impetus to stay on the healthy road you’ve taken.

Embrace change, stay positive, and believe in yourself... because I believe in you and want nothing more than to help make you our next great success story!

Chad Tackett, BS, CPT

P.S. I am fully committed to improving the Fast Track to Fat Loss program and would love any honest feedback or suggestions you might have. Please post your comments here. Thank you!
Since nutrition is absolutely critical to your success, the following is a quick overview and reference guide for choosing the right foods, at the right times, in the right amounts.

**The 5 Simple Keys to Guaranteed Fat Loss**

- **Key # 1**: You must create a caloric deficit to lose fat, but you don’t have to count calories to do so.
- **Key # 2**: Carbs are critical to your success and you should include the right kind at each snack and meal.
- **Key # 3**: It’s important that you include a protein and healthy fat at each snack and meal.
- **Key # 4**: Water is critical to your fat loss success and should be consumed throughout the day.
- **Key # 5**: Planning and preparing the right types of foods in advance will make following the program so much easier.

  - HEALTHY FAT
**Portions**

Knowing how much to eat is a simple 2-step process:

- **Step 1:** Dish up your portions based on the *fist/palm/thumb rule*:
  
  - **Carbs** should be approximately the size of your fist.
  - **Protein** should be approximately the size of your palm.
  - **Fat** should be about the size of your thumb.

- **Step 2:** Listen to your body and stop eating when you’re comfortably full.

**Process for Eating the Right Foods at the Right Times in the Right Amounts:**

- **Step 1 and 2:** Choose the foods you’d like to eat from our Recommended Food List and create a grocery list.

- **Step 3 and 4:** Plan and prepare your meals for the day.

- **Step 5:** Dish up your portions based on the *fist/palm/thumb rule*, but then listen to your body for signs of fullness to know when to stop eating.

**Striking a Balance between Fun and Effective**

Here’s a simple 4-step process when there’s a special event coming up and you want to indulge on your favorite food and/or drinks:

- **Step 1:** be a little more active that day.

- **Step 2:** be a little more strict with your meals and really focus on veggies and protein.

- **Step 3:** make simple, healthier changes to the foods and drinks you want to enjoy at the event.

- **Step 4:** get right back on track after the event.
