Amazon app store free

Amazon today announced it will launch their App Store in the UK, Germany, France, Italy and Spain giving European customers more options to buy Android apps for their smartphones and tablets. In addition to getting quick access to 'today's free app' content Amazon will be streamed and each app store country will be slightly different. Amazon will conduct their own application testing to ensure the quality of the products they provide. In addition, customers will be able to see recommendations and reviews before choosing a 1-click payment option. With Amazon Kindle Fire sales overshadowed by the Nexus 7 this seems to be helping Amazon's market presence. Go to www.amazon.co.uk/get-appstore get access. You can see the full press release below. SEATTLE and LUXEMBOURG – August 30, 2012 – (NASDAQ: AMZN) – Amazon.com, Inc. today announced the launch of its Amazon Appstore in the UK, Germany, France, Italy and Spain, giving European customers access to a wide selection of Amazon-quality Android apps with the convenience of shopping on Amazon from their Android phones and tablets. Customers can get the Amazon Appstore for their Android phones and tablets by visiting www.amazon.co.uk/get-appstore. The Amazon Appstore offers a large selection of games and apps, including local favourites such as 'Jamie Oliver's 20 Minute Meals' and 'Skyscanner', well-established bestsellers such as 'Who Wants to be a Millionaire' and 'Cut the Rope', and new apps from top brands such as Rovio and Sanrio Digital. In addition to local content and mobile stores streamed for each specific country, European customers will have access to popular Amazon Appstore features such as 'Free App of the Day', which offers paid apps for free every day. The Free Today app is an ad-free version of 'Angry Birds'; and 'Plants vs. PopCap's favorite zombies will be offered for free tomorrow. All Free Applications Today are selected specifically for the Free Applications program Today. Apps and games purchased from Amazon can be used across customers' Android devices, allowing them to buy apps or games once and enjoy them everywhere. The Amazon Appstore also includes popular Amazon features such as personalized recommendations, Customer Reviews, and 1-Click payments. To ensure that customers have the best experience with the apps they purchase, Amazon tested apps and is supported by Amazon's world-class customer support. Customers in the US have purchased millions of apps, games, in-app items and subscriptions since the store launched last year, and we've received great feedback on discovery features like Free App of the Day. We evaluate and test games and apps before making them available in the Appstore so that we customers have a great experience with the games and apps they have said Jim Adkins, Vice President of Amazon Appstore. Amazon has spent years developing innovative features that help customers find and find the right product for them and has applied that know to the Amazon Appstore. We are delighted to be able to extend that experience to our European customers. Amazon continues to roll out services and features that make it the most complete end-to-end solution for developers looking to build, market and monetize their apps and games. Developers can build their apps and games using Amazon's industry-leading infrastructure platform. For important audience engagement features such as Leaderboard, Achievement, and Sync of game status between devices, developers can use Amazon's new GameCircle service. To gain exposure to tens of millions of customers, developers can list their apps in the Amazon Appstore and take advantage of awareness-building programs like The Free App of the Day. And, to monetize their apps and games, developers can use Amazon's industry-leading e-commerce and payment capabilities such as In-App Purchases and Subscriptions. Amazon's Free App of the Day program is truly unique, says Peter Vesterbacka, Rovio Mighty Eagle and CMO. Over the past year we've offered Amazon customers some of our best-selling premium games like 'Angry Birds Rio' and 'Angry Birds Seasons', for free, and the response has been absolutely amazing. We are happy to offer Amazon customers one of our most popular premium titles, 'Angry Birds', for free today. Amazon customers are very important to us, and 'Cut the Rope' and 'Cut the Rope: Experiments' have topped the charts in the Amazon Appstore in the US. We're focused on delivering a great gaming experience to our users around the world, and look forward to reaching more 'Cut the Rope' fans as Amazon launches its store in Europe, said Misha Lyalin, CEO of ZeptoLab. At Glu we have always been an early adopter of Amazon's services to build and sell our mobile games. For example, Frontline Commando was one of the first games on the Amazon Appstore to offer IAP and subscriptions. The game also makes use of Amazon's S3 and Sync services, said Niccolo de Masi, Glu Mobile's Chief Executive Officer. Amazon offers us exposure to its large customer base and we will continue to use Amazon's platform in our efforts to grow our business. We are big fans of the Amazon Appstore and have seen tremendous growth in our business since we started releasing our apps on the Amazon platform, said Suli Ali, CEO of TinyCo. We have been very successful with Amazon In-App Purchases. It's easy to implement, and we've produced which is much more per customer than with any other platform. Because we have been successful with Amazon, when GameCircle GameCircle introduced, it is brainless, we add it to our application immediately. Zolmo is thrilled that 'Jamie Oliver's 20 Minute Meals' will be part of Amazon's international expansion into the UK, Germany, France, Italy and Spain, said Tristan Celder, CEO of Zolmo. We look forward to being part of Amazon's Free App of the Day programme as we bring fast and delicious Jamie Oliver recipes to a host of new customers around the world. The arrival of amazon stores in the UK makes it easier for Skyscanner users to search for flights wherever they want, says Gareth Williams, CEO of Skyscanner, Travellers by definition a group of mobile people so they should be able to search while travelling, we are looking forward to making All Our Flights, Anywhere! available to millions of Amazon customers in the UK. Online mega-retailer Amazon.com is gearing up to step into the mobile app market: the company is preparing to launch its own app store for Android smartphones, going head-to-head with Google's Android Marketplace. According to materials sent to selected developers, Amazon — such as Google and the Apple App Store — plans to pocket 30 percent of each sale, leaving 70 percent to developers. However, unlike Google—whose Android market is essentially free screenless app delivery—Amazon seems intent on offering a more curated experience: apps will not be allowed to carry offensive content and must meet approval criteria. Amazon also plans to require developers not to offer the same apps elsewhere at cheaper prices. A second Android app store may be of interest to developers because Amazon's payment processing system is accepted in a number of places where Google Checkout does not operate, Plus, Amazon has a built-in customer base: as one of the world's largest electronics retailers, Amazon already has tens of millions of active customers. Amazon also plans to allow developers to submit videos to follow their apps to give a sense of how they work — a move that will put it ahead of Apple's App Store and Android Market. Amazon has declined to make any public comment about plans for the mobile app store. Amazon isn't the first to plan its own Android app store: mobile carrier Verizon launches music store and VCast app for Android devices, displays a curated menu of apps — and Verizon offers will preload on Android phones offered by carriers. Mobile developers have largely embraced Google's Android market, in part because not checked—programmers don't have to worry about bypassing the highly arbitrary and undisclosed rules that Apple applies to App Store delivery. (Apple recently released App Store guidelines in an effort to add transparency for developers.) However, Android app developers have also expressed frustration with the Android Marketplace organization: the comparative chaos of the Android Market could give Amazon the opportunity to differentiate itself through customer reviews and product recommendation service technology. MacOS Spotlight Master Editor Recommendations is a search engine for your Mac that helps you find documents, contacts, apps, dictionary definitions, and more. Spotlight Suggestions also helps you find relevant info on the web. Find out how to get the most out of Spotlight on your Mac! Amazon will launch its own Android app store, challenging Google's official app collection, according to TechCrunch. The site reveals undisclosed details about how the store will function, including developer royalties, DRM and pricing structures. A source also hinted that Amazon was working to build its own tablet computer. Here's a closer look:Amazon's Android AppsTechCrunch corroborates its report with multiple sources, so it looks like Amazon will build its own Android app store. Details of how the store will work seem too specific to be a mere guess. Here's how Amazon is expected to run the store: Amazon will pay developers 70 percent of its sales and take 30 percent - the standard agreement for an app store. Amazon also mentioned an alternative: 20 percent of the List Price on the date of purchase, which is confusing. Developers can't sell apps cheaper on similar services, which is likely to have amazon other app stores. Apps can also be free. Like Apple, it costs $99 to become a developer. The store will only be available in the United States for now. If the developer app is available on other platforms and in other stores, updates must be simultaneously across all channels. Amazon plans to deploy Amazon-specific DRM to each application. Apps can be removed for any reason, similar to Apple policies. TechCrunch also points out some curious language in its report: [Amazon has] a single policy to define all the features and operations of this program and to set retail prices and other terms in which we sell the Application. Engadget thinks this language means that price is [Amazon's] call - not your language - and they've got some say in how your app will work and what it will do. If Engadget's analysis is correct, this provision is guaranteed to anger many developers. Amazon's plan comes right on the heels of Verizon preparing stores Android V CAST itself - a direct insult to Google. Google CEO Eric Schmidt is expected to speak today at TechCrunch Disrupt at 10am PT (1pm EST). Maybe he'll say something silly silly this newly discovered crowd of app competitors. On the other hand, this Attack Android app, available through several vendors, can only help the platform build its ranking and compete against Apple.Amazon tablet versus iPad ... Against the Kindle? The same source who leaked Amazon's Android app store also mentioned Amazon's plans to build its own tablet computer and reveal it alongside the app store. Details are scarce on Amazon tablets, but TechCrunch is confident that because the source is the same as the one confirming the app store, tablet rumours are likely true. While building an Amazon tablet to compete against Apple's mega-popular iPad shouldn't come as a surprise - everyone and their mother are building an Android-powered tablet - it strikes me as weird and possibly dangerous. Is Amazon seriously pitting its own tablets against the Kindle? Indeed, comparing Kindle to any tablet is unfair - they are completely different types of devices, altogether. Amazon CEO Jeff Bezos has confirmed that while the iPad is for entertainment-driven consumers, the Kindle is geared toward diehard readers. However, as the iPad and iBook have put pressure on the Kindle, Amazon's tablets are likely to undermine Kindle sales. Sounds like internal sabotage of Amazon's best-selling products - a suspect move. Note: When you buy something after clicking on a link in our article, we may earn a small commission.
