Local Access Control Panel
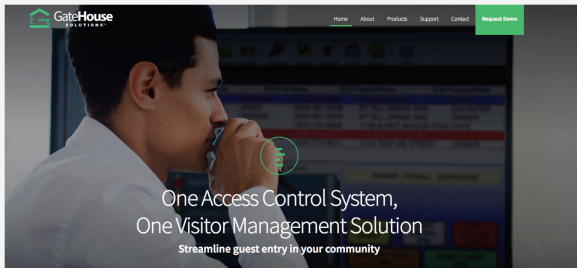

One System, One Solution

Streamline visitor entry in your community

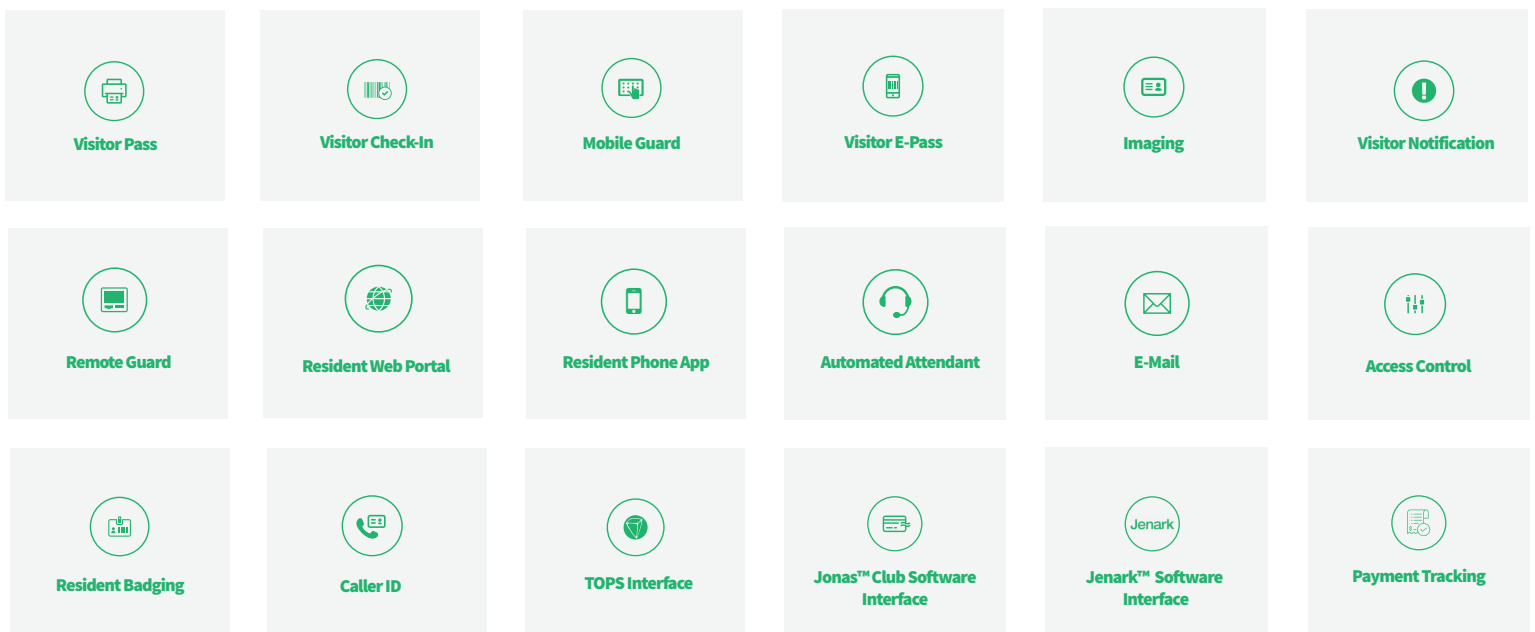

Guard Workstation

The user-friendly design of the Guard Workstation helps streamline visitor entry and resident gate access by accurately and efficiently processing requests and maintaining operational effectiveness of gated community security personnel. The Guard Workstation offers an intuitive screen display, easily navigated by the user via touchscreen, function key or mouse-click options. Combine this workstation with available software modules to reduce manual mistakes and expedite visitor entry.

Administrator Web Portal

The simple and organized design of the Administrative Workstation allows administrators to efficiently maintain the community's database. The Administrative Workstation is available on a cloud-based platform to give users the flexibility and convenience to manage the database from anywhere with an Internet connection. Combine this workstation with available software modules to help reduce the data entry performed by your property managers and free their time to manage your community.
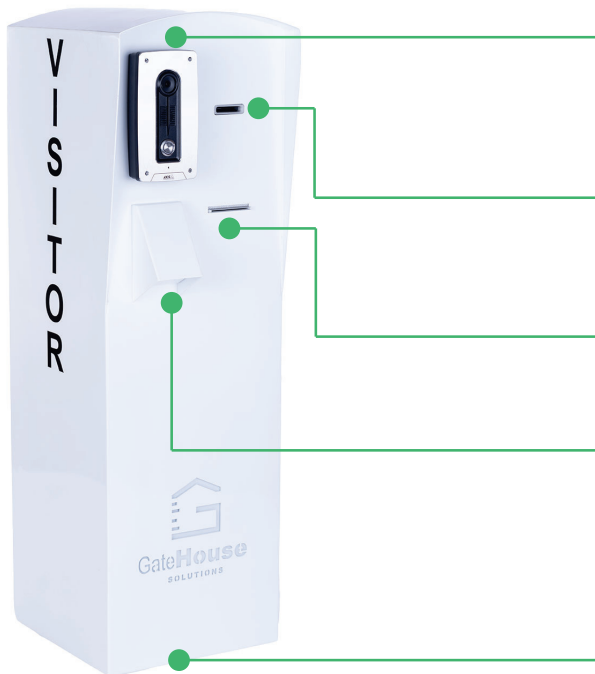

Modules

The GateHouse Solutions® Software's extensive collection of optional modules provides complete flexibility in configuring a system for any community's needs, and can grow as your community grows.

Access Control Software

GateHouse Solutions® has taken the next step in providing customers with a complete visitor and resident management system by developing cloud-based access control software to provide administrators with more flexibility to view the activity for their community or office from anywhere with Internet access and a dashboard was designed to engage security guards to be more proactive in monitoring the access points of the community. This software can be combined with our visitor management software or it can be a stand alone access control solution.

We partnered with HID Global, one of the lead manufactures of access control equipment, to provide our customers with the best equipment. This combination of software and equipment provides the customer with enhance functionality and more reliability.

Note: The software works with several types of readers include barcode decal readers, RFID transponder readers, proximity card readers, mobile ID readers, wireless clicker receivers, etc.
