

# Accushield COVID Screening

You no longer will have to wait for someone to screen you for signs and symptoms of COVID before starting work!

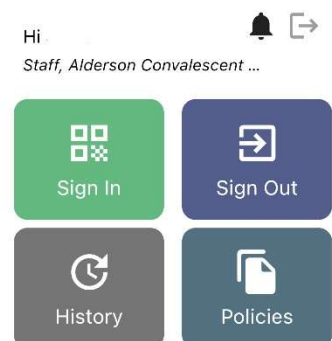

## What you will need to do to use Accushield:

1. Scan this QR code to download the mobile app:
2. Or, on your mobile device, go to the Apple Store or the Google Play Store and search for Accushield Mobile. Download the app, open, and follow the prompts.
3. If you are having trouble registering, please see Joe, RN/IP.
4. If you are unable to register, you can use the Accushield Kiosk by pressing “Sign In” on the kiosk home screen, then the yellow “Community Staff” button.

## How to answer screening questions and have your temperature taken:

1. When you are ready to be screened for signs and symptoms of COVID, open the Accushield Mobile app. You will be taken to the home screen where you will need to press the green “Sign In” button.
2. You will be asked all of the usual COVID screening questions. Press either “Yes” or “No” until you have answered all questions. These questions can be answered up to an hour before arriving to work.
3. When you have answered all of the screening questions, it will ask you to confirm your answers. If all of your answers are correct, press the green “Confirm” button. If you need to change an answer, press the grey “Change” button and you will be taken back to the screening questions. You must answer all COVID screening questions honestly and truthfully.

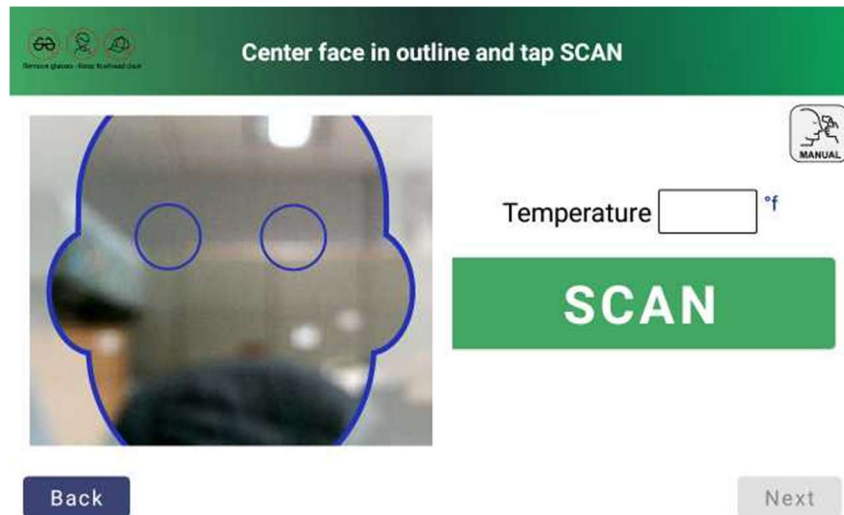

4. Once you have pressed the green “Confirm” button, you will be given a QR code that you will scan when you get to work. Remember: this QR code is valid for 1 hour, starting from when you submit your screening questions. There is a time under your QR that will inform you when it expires.

**When you arrive at work:**

1. Take out your mobile device and access the QR code on the Accushield Mobile app. Take off any glasses or eyewear you are wearing.
2. With the QR code on your screen, place it under the Accushield kiosk scanner. You should see a green light on top of the scanner and hear a chime.
3. Once you have scanned your QR code, you must align your face to the outline on the kiosk screen. You only have 3-4 seconds to do this, so be ready! If you do not make it in this short window, don't worry, simply align your eyes with the outline and press the green scan button.

4. If the kiosk is unable to record your temperature, call for a screener to take your temperature manually. This temperature can be entered by pressing the “Manual” button in the upper right hand corner of the screen.
5. Once your temperature has been taken, a sticker will be printed. Place this sticker on your shirt and clock in! This sticker must be visible while you are working, so please do not put it on your jacket.
