**Autodesk Insight**

**Getting Started Guide**

**Insight** empowers architects and integrated teams with centralized access to performance data and advanced analysis engines. Through robust integration with Revit and FormIt and direct access to guidance and recommendations, architects can approach the design process with understanding of the elements that lead to better building performance outcomes throughout the building lifecycle.

1. **Generate Insight**
   Start with a Revit or FormIt model. In Revit set your location then select **Generate** on the Energy Optimization panel. If you are using a FormIt model, be sure you are using masses to represent your geometry. Set your location, then select **Generate Insight**.

2. **Access Insight**
   Once your analysis has been completed you can access your results by selecting **Optimize** in Revit or **View Insight** in FormIt Pro. With Revit you will receive an Analysis Complete email with a link to your Insight. Alternatively, you can login directly to **insight.autodesk.com** to view your Insights.
