Upload your CAD model

Every small piece helps to grow the community. You can host even files that should stay private from the other engineers. Start uploading and getting feedback.

1. Always upload only models that you have created yourself. (**Read more about our [Terms of Use](#)**)
2. Help more engineers and get more downloads by **adding a STEP/IGES format** and a **screenshot**.
3. You can upload models **privately** and **invite engineers** in person to view them.
