

IMPORTANT NOTES

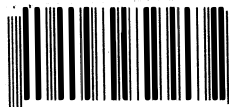

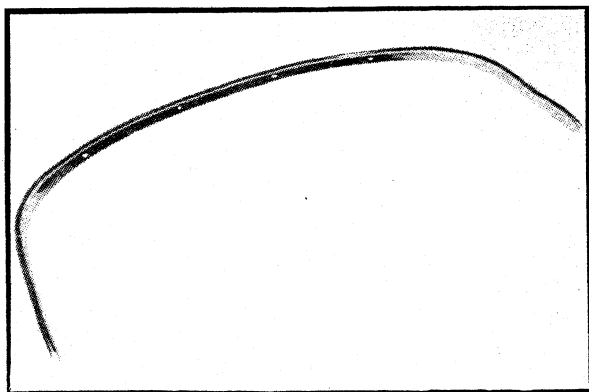

BARRACUDA WHEEL OPENING MOLDING (J2SET)

READ BEFORE INSTALLATION

1. Due to very complicated production methods, small tooling marks may appear on the underside of moldings. Once installed on the vehicle these markings will be virtually undetectable. The edges of the moldings that are seen from the side of the car appear just as those Chrysler originally supplied.
2. We have tried several sets of N.O.S. moldings on *four different* Barracuda models (1970, 1971, 1972, & 1974) prior to manufacturing to determine actual size, shape, and mounting hole location. Through our investigations, we've concluded there are several possibilities for the location of the mounting holes so don't be alarmed if you find the holes on your car differ in location from our reproduction moldings. We have used the most popular location for mounting holes on our moldings. There is a possibility that all or only a few of your original holes will line up.
3. If your car was not originally equipped with moldings, or your holes do not line up with the holes in our moldings, simply line up the molding, mark the location of the molding holes on your fenders / quarter panels, and carefully drill new holes for proper alignment, *before installation.*

Please take note that these minor differences don't affect the final appearance of the moldings once installed. If you have any questions about this product please call us at 800-950-9503.
