

GVcloud Notify App to Stay Connected on the Go

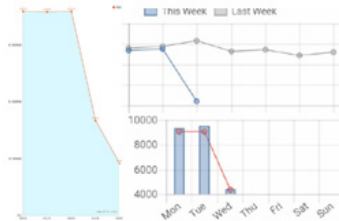

Using GVcloud Notify app, you can promptly track down recorded events of all connected GV-VMS and GV-Recording Server, and be informed of any intrusions through push notification alerts when a camera or I/O device is triggered. Store owners and retailers can use the real-time sales data provided to perform efficient in-store and visitor management.

Key Features

Event Notification

Receives instant security system alerts and unusual system status.

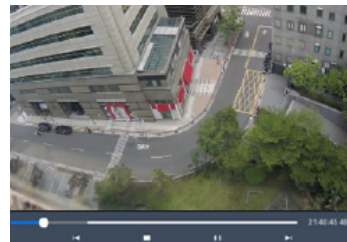

Retail Output

Generates retail reports, POS data and Counter results in statistical, graphical forms.

Live Viewing

Accesses the current camera image from any iOS or Android mobile devices.

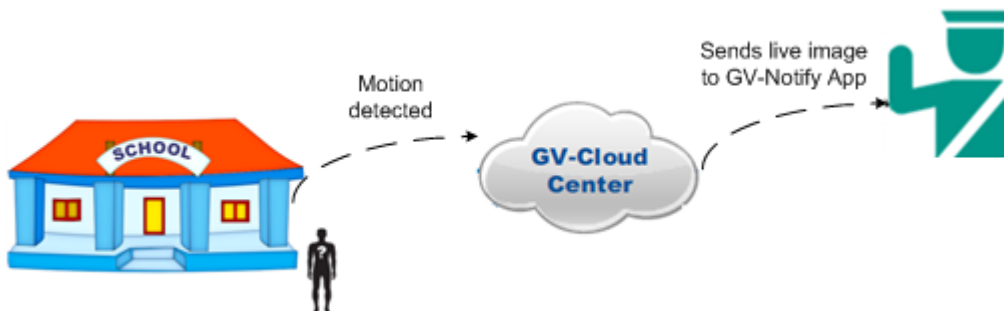

Remote Playback

Plays back recording events stored in the cloud.

CASE ONE – Emergency Alarms

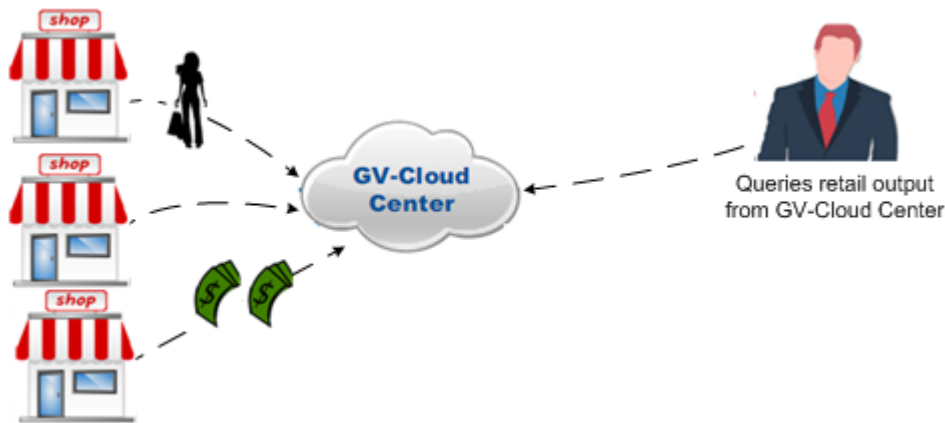

In high density environments like schools, if someone attempts to trespass on the grounds, GVcloud Notify app's immediate event notifications enable teachers and security staff to watch live view of the associated motion-triggered camera(s).

CASE TWO – Retail Solutions

Once the daily or even monthly statistics has been created, supermarket managers are capable of examining the recent transaction volume and customer flow patterns in a timely fashion.

GV-Cloud Center is the PC version of GVcloudNotify app. Both share the same functionality. For more information on how GVcloudNotify app may run on your mobile devices, please visit:

- [GV-Cloud Center Introduction Video](#)
- [The Demonstration Link of GV-Cloud Center](#) (After entering the site, click **DEMO** to experience GV-Cloud Center)
