ABOUT THE GIIN

The Global Impact Investing Network (GIIN) is the global champion of impact investing, dedicated to increasing its scale and effectiveness around the world. The GIIN builds critical market infrastructure and supports activities, education, and research that help accelerate the development of a coherent impact investing industry. IRIS+ is managed as a public good by the GIIN.
ABOUT IRIS+

Background & Purpose

Impact measurement and management (IMM) is a hallmark of impact investing. The vision of the Global Impact Investing Network (GIIN)—as articulated in its Roadmap for the Future of Impact Investing—is for social and environmental factors to be integrated into investment decisions simply by default, as the ‘normal’ way of doing things. Impact investing can play a central role in realizing this vision by setting and raising the standards for investment practice and generating the tools and data that allow investors to evaluate impact and channel capital to the most effective solutions. A coherent, consistent practice of high-quality IMM must be implemented as the norm for all organizations seeking to understand and improve their effects on people and planet.

IRIS+

IRIS+ is a system that makes it easier for investors to translate their impact intentions into real impact results.

Key Features of IRIS+ include the following:

- Alignment with the UN Sustainable Development Goals (SDGs), including both SDG Goals and targets.
- Alignment with other major frameworks and conventions, including the five dimensions of impact and more than 50 metrics frameworks, standards, and platforms.
- Thematic taxonomy based on generally accepted Impact Categories and Impact Themes.
- Core Metric Sets for investment decision-making, backed by evidence, based on best practices, and standardized to enable comparison of data.
- IRIS Catalog of Metrics, the generally accepted source of standard social and environmental performance metrics used by leading impact investors.
- Curated resources and practical how-to guidance to support day-to-day IMM implementation.
- Interoperability with third-party data platforms and systems that use IRIS metrics.

IRIS+ is a critical component of the enabling infrastructure needed to scale the impact investing industry. A unified, easy-to-navigate system for defining, measuring, managing, and reporting social and environmental performance. IRIS+ enables data comparisons that drive results and provide the transparency and credibility investors need. The GIIN will regularly expand IRIS+ over time to include additional Impact Themes and implementation resources.
IRIS+ ALIGNMENT WITH THE SDGs

Objective

The SDGs are the globally recognized to-do list for the world’s most urgent development challenges. As of 2020, 87% of all impact investors use the SDGs for at least one measurement and management purpose. Despite this enthusiasm, it remains unclear how investors can measure, manage, and track their progress in a common, shared way toward the targets set forth by the SDGs. Investors have cited the current lack of data comparability and a common language of impact as a leading barrier to the advancement of IMM practice.

To address this challenge, IRIS+ translates the SDGs into aligned IRIS metrics that investors can use throughout the investment management process. Impact investors and other impact investing stakeholders that rely on the SDGs to set and report their impact goals can use IRIS+ in two ways:

1. **IRIS+ Core Metrics Sets**: Backed by evidence and based on best practice, IRIS+ Core Metrics Sets may be used to assess the effects of any investment or enterprise across the five dimensions of impact. The IRIS+ Core Metrics Sets are aligned to the SDG Goals, enable comparison of data, and help illuminate material understanding of impact performance.

2. **IRIS Catalog of Metrics**: Home to all IRIS metrics, the Catalog contains the generally accepted impact performance metrics for impact investors. The IRIS Catalog of Metrics is aligned with SDG targets; every SDG target identified as investable has a related and comprehensive set of applicable IRIS metrics. This feature is best used by investors that want to adopt a subset of SDG target-aligned IRIS metrics to track progress toward self-articulated impact goals.

Elements

The SDGs comprise Goals, targets, and indicators (Figure 1), with Goals and targets aligned to IRIS+ (Figure 2).

1 As of publishing of this document. Over time, IRIS+ will offer a growing list of Core Metrics Sets.
1. Alignment of IRIS+ Core Metrics Sets with SDG Goals

The IRIS+ thematic taxonomy is built from Impact Categories, Impact Themes, and Strategic Goals. Each IRIS+ Core Metrics Set corresponds to a specific, commonly deployed Strategic Goal, such as Improving Financial Health (for the Financial Inclusion Impact Theme) or Improving Energy Alternatives for Cooking (for the Energy Access Impact Theme). All IRIS+ Strategic Goals and their corresponding Core Metrics Sets are aligned with the SDGs at the Goal level. Therefore, investors that describe their impact goals using SDGs at the Goal level can use IRIS+ to identify relevant Core Metrics Sets they can adopt to track and manage impact performance toward those goals. Similarly, impact investors that do not use the SDGs to frame their portfolios can nevertheless identify relevant SDGs mapping to their adopted Core Metrics Set(s).

Each of the three elements of the IRIS+ thematic taxonomy is described below.

- **Impact Categories:** Impact Categories within the IRIS+ system are aligned with the industry classes standardized by the International Standard Industrial Classification of All Economic Activities (ISIC). The inclusion of specific categories is based on input received from the hundreds of stakeholders around the world involved in the development of IRIS+.

- **Impact Themes:** Impact Themes classify the types of Strategic Goals or approaches investors or enterprises may employ to achieve the primary social or environmental effects they intend to deliver, and each is designed to help describe a purpose-driven approach to contribute to impact within its broader Impact Category. Each theme is also based on macroeconomic topics or trends that investors can use to identify and assess strong investment opportunities and that enterprises can use to frame and communicate their work.

- **Strategic Goals:** Strategic Goals are common strategies deployed by impact investors to achieve established social or environmental impact objectives within generally accepted Impact Categories and Impact Themes. A corresponding Core Metrics Set has been created for each Strategic Goal in IRIS+.

Figure 3 illustrates the relationships among IRIS+ Impact Categories, Impact Themes, Strategic Goals, and Core Metrics Sets.

As investors increasingly use the SDGs to frame their activities, alignment of IRIS+ with the SDGs at the Goal level allows investors to use IRIS+ to discover SDG-relevant Core Metrics Sets that enable credible, standard measurement of the impact performance of their portfolio. This allows comparison of data and shared progress towards collective achievement of the SDGs.

---

2 The IRIS+ Thematic Taxonomy explains the structure of IRIS+.
Figure 4, below, illustrates the sequential relationship between the SDGs at the Goal level and the IRIS+ Core Metrics Sets. The orange tiles represent an example selection of a relevant Core Metrics Set by an investor using IRIS+, whereas the blue tiles represent the total roster of available choices based on IRIS+ alignment with SDG 8: Promote inclusive and sustainable economic growth, employment and decent work for all.

The SDG Goals have been aligned with IRIS+ such that choosing more than one to identify relevant Strategic Goals and associated Core Metrics Sets will only reveal IRIS+ Impact Categories that align with all selected SDG Goals at once, and not just one or the other.

**Alignment of IRIS Catalog of Metrics with SDG targets**

For investors wishing to adopt an individualized selection of aligned IRIS metrics to track progress toward self-identified overall impact goals, the IRIS+ Catalog of Metrics has been evaluated against all 169 SDG targets. 78 SDG targets align with the IRIS Catalog of Metrics.3

Figure 5 illustrates how an investor might use the alignment of SDG targets with the IRIS Catalog of Metrics. Appendix B in this document details the alignment of the IRIS Catalog of Metrics with each SDG target.

---

3 SDG targets that have not been aligned to the IRIS Catalog of Metrics focus on international cooperation, public policy, or national-level activities; these are less directly related to impact investment activity.
METHODOLOGY

IRIS+ Core Metrics Sets alignment with SDG Goals

Aligning SDG Goals with IRIS+ Core Metrics Sets followed an initial process in 2018-2019, which included:

- Leveraged the work conducted by hundreds of experts through the Navigating Impact project.\(^4\)
- Consulted with the more than 300 members of the IRIS+ working groups and opened two public comment periods: one for the IRIS+ thematic taxonomy and one for IRIS+ Core Metrics Sets. In total, more than 900 comments were received.

Since the initial alignment of the IRIS+ Core Metrics Sets to the SDG Goals, the alignment has been updated with each update to the IRIS Catalog of metrics. Each of these updates has undergone an extensive stakeholder engagement process and public comment period.

SDG target alignment with the IRIS Catalog of Metrics

Aligning SDG Goals with IRIS+ Core Metrics Sets followed an initial process in 2018-2019, which included:

- Each discrete component of every SDG target was matched to the IRIS+ thematic taxonomy to identify relevant Impact Categories and Impact Themes.
- Where an SDG target aligned with an Impact Theme for which an evidence-backed and best practice–based Navigating Impact project theme had been completed, relevant metrics identified through the Navigating Impact project were applied.
- Where a Navigating Impact project theme had not been developed for the aligned IRIS+ Impact Theme, relevant metrics were identified through the following process:
  - Identify the target stakeholder (people or planet).
  - If people are the target stakeholder, determine whether the SDG target was specific to employees, clients, distributors, suppliers, or more than one of these.
  - If the planet is the target stakeholder, determine the relevant IRIS metrics using the aligned IRIS+ Impact Categories and Impact Themes.
- Searched the IRIS Catalog of Metrics to identify metrics that are oriented toward the relevant Impact Categories and Impact Themes for a given SDG target.
- Selected any additional relevant metrics by cross-referencing all other cross-Impact Category metrics.\(^5\)
- The completed alignment of the IRIS Catalog of Metrics with SDGs targets was included in an initial IRIS+ public comment period, held in 2019.
- As the IRIS Catalog of Metrics is updated in line with the development and launch of new themes, the alignments are updated.
