Dear friends,

We are delighted to share this year’s Impact Report, which focuses on our IMPACT methodology: our guide for integrating impact into investment decisions, illustrated by case studies from our portfolio.

At Bridges, we believe that an impact-driven approach is core to our success in building great businesses and delivering superior financial returns. It motivates us as a team and provides a sharp focus on opportunities that have significant growth potential, precisely because they address widespread societal issues.

Successful exits across our various funds continue to reinforce this thesis. Since 2012, our Sustainable Growth Funds have been delighted to announce the sale of our investment in Whelan, the UK’s first oil re-refinery in Stoke-on-Trent, an investment which has offset more than 300 tonnes of greenhouse gas emissions, created 31 jobs in a deprived area and delivered a strong financial return to our investors. The sale of our majority stake in The Gym is another such example, generating a significant return for our investors, while creating affordable access for over 200,000 customers to exercise in inner city areas, a third of whom have never visited a gym before. Most recently, with successful exits beginning in our Sustainable Property Fund and the exciting launch of the Bridges Social Impact Bond Fund – the first of its kind globally – we are more convinced than ever of the power of an impact-driven investment approach to generate superior returns for investors and for society at-large.

At the G8 Summit in the Spring of 2013, UK Prime Minister David Cameron described the power of social investment to ‘tackle the world’s most difficult problems’, putting its growth squarely on the global agenda and establishing the G8 Taskforce for Social Investment. Underpinning all agreed actions emerging from the G8 Summit was a call for collaboration: the need to build a global community, the need to standardise and the need to share best practice. What role can Bridges play in this?

By integrating impact into all our investment decisions, we have built high growth businesses that are excelling commercially as they drive positive change for society. Our recent successful exits show how hands-on investment and entrepreneurial talent can provide solutions to some of society’s biggest challenges.

Philip Newborough
Managing Partner and Co-Founder

market. It is with a view to global collaboration that we have developed Bridges IMPACT+, a practitioner-led advisory function within Bridges, which advises a wide range of clients on all practitioner aspects of combining financial and social returns.

It is also in this spirit that we have chosen to focus this year’s report on sharing our IMPACT methodology. Rooted in our day-to-day experience and based on over a decade of learning, we hope it combines idealism with realism and can serve as a useful contribution to this important conversation.

We hope you enjoy reading the report and welcome your feedback.

The Bridges Ventures team
About Us

Bridges Ventures is a specialist fund manager, dedicated to using an impact-driven investment approach to create superior returns for both investors and society at-large. Bridges is majority owned by its senior management team, with the Bridges Charitable Trust having a substantial minority ownership interest and control over any change to the firm’s founding commitment to raise only funds with both financial and social goals. The Bridges team also donates the equivalent of 10% of their own profits to the Trust’s philanthropic activities. Our investment strategy is focused on opportunities where investments can generate investor returns through helping meet pressing social or environmental challenges – be it backing businesses that generate jobs in underserved markets, or building environmentally friendly care homes for the elderly to sustain an ageing population, or providing flexible financing for innovative community transport models.

In pursuing this strategy over the last eleven years, we have innovated a range of investment vehicles across three main fund types – Sustainable Growth Funds, Property Funds and Social Sector Funds – and are building a strong track record of financial and societal returns.

Our Funds

Bridges Sustainable Growth Funds

Our Sustainable Growth Funds take a thematic approach, providing growth capital for SMEs which create impact through the products they sell (health and well-being, education and skills or sustainable living) or the economic growth they generate in underserved markets (80% of our investments are located in the most deprived 25% of the UK, with over a third in the most deprived 10%). Through these funds, we have been able to show our commercial investors, including pension funds and banks, that impact can be an engine of value.

Bridges Property Funds

Our Sustainable Property Fund takes a thematic approach to property, investing entrepreneurially in buildings that promote regeneration, as well as those showing environmental leadership.

The CarePlaces Fund focuses exclusively on building high-quality care homes for the elderly. Given our ageing population and growing demand for energy-efficient buildings, these niche investment vehicles offer commercial investors growth opportunities in an otherwise saturated market.

Bridges Social Sector Funds

Bridges manages two social sector funds, providing finance and support to charities and social enterprises delivering services with high social impact.

Seeded by the Bridges Charitable Trust in 2008, the Bridges Social Entrepreneurs Fund aims to address the funding gap often faced by fast growing social enterprises looking to scale. The Fund brings together social investors wanting to support social impact with social enterprises seeking to grow.

The Bridges Social Impact Bond Fund is the first of its kind and provides investment and support to charities and social enterprises delivering programmes designed to improve social outcomes in areas such as education, therapy, adoption and care for vulnerable young people.

Since we founded Bridges in 2002 we have been committed to innovating investment vehicles that match capital with the high-impact ventures that need it. In 2013, with the support of new and existing investors, we launched the first fund investing in social impact bonds and also closed our third sustainable growth fund. Michele Giddens Partner and Co-Founder

As our portfolio matures, our impact-driven approach, including a focus on environmental leadership, is proving an important driver in attracting occupiers, with tenants seeking to reduce operating costs and demonstrate environmental responsibility towards their stakeholders. Simon Ringer Partner and Head of Property Funds

By providing charities and social enterprises with a sustainable and outcomes-based source of capital and support, our new Social Impact Bond fund aims to play a catalytic role in the way social sector organisations are financed in the future. Antony Ross Partner and Head of Social Sector Funds

Bridges Ventures’ funds are only available to persons who can be categorised as professional clients. Bridges Ventures acts only for the funds it manages and does not act for or offer advice to, any other persons, nor provide them with the protection it offers its client funds. Past performance is not indicative of future performance.
While our investments range from fast-growth SMEs to property to social enterprises, we have a thematic focus that cross-cuts all fund types. Each theme represents a cluster of societal outcomes that we are learning can be efficiently delivered through investable models. For example, in Education & Skills, we have focused on driving employability through vocational training, backing a range of models that target different beneficiary groups (from commercial companies to trading charities to payment-by-results models).

In Health & Well-being, we have focused on improving access to high-quality care, investing in a domiciliary care co-operative, a model that improves life outcomes for children in the care system and the UK’s most environmentally-friendly care homes.

Many of our investments over the last ten years have been in ‘consumer champion’ companies – businesses seeking to provide value-for-money for underserved consumers. Getting this right means a laser focus on what makes a product most valuable to customers, and a trimming of what does not. For example, through our investment in The Gym Group, we have learned to focus on figuring out how affordable we can make exercise in inner city areas, while maintaining high quality and profitability.

Over time, we have developed an investment ‘sweet spot’ where our themes overlap: high-impact products or services that combine quality, access, affordability and efficiency, making them ideally suited to address the needs of underserved markets.
Underserved Markets

**Challenges:** The poorest communities are the most disadvantaged in terms of access to quality services and economic opportunity.

**Opportunities:** Underutilised and affordable property, unmet local demand, underutilised talent and low competition for deals means we can identify pockets of growth in underserved markets.

**Our investments:** We focus on business opportunities that offer real potential for catalysing economic growth in the most deprived 25% of locations in the UK.

---

Health & Well-being

**Challenges:** Increasing sophistication of care, lifestyle changes, rising levels of obesity and ageing population are current trends driving a fundamental transformation in the provision of support for health and well-being.

**Opportunities:** Increased outsourcing of services from the public sector as well as higher demand for quality care homes, domiciliary provision and services promoting health and well-being including gyms and fitness facilities.

**Our investments:** We identify entrepreneurs providing specialist services to the healthcare sector, as well as those offering health & well-being related services to a broad range of communities, including quality care homes for the elderly.

---

Sustainable Living

**Challenges:** Climate change, resource constraints and energy security are some of the most pressing challenges facing today's society.

**Opportunities:** Attractive investment opportunities exist in key areas including decentralised renewable energy generation, waste recycling, smart buildings and waste water treatment and recycling.

**Our investments:** We identify companies offering entrepreneurial solutions to both mitigate and manage environmental change.

---

Education & Skills

**Challenges:** Skills shortage and stagnating school performance, alongside increasing budget constraints, are having a negative effect on employability levels.

**Opportunities:** Companies offering vocational training or whose activities focus on broadening accessibility or increasing quality for greater employability are a growing sector.

**Our investments:** We focus on companies offering entrepreneurial solutions to both mitigate and manage environmental change.

---

Care & Share Associates (CASA) Bridges Social Entrepreneurs Fund

CASA builds and develops employee-owned franchise companies to provide domiciliary care to older, disabled and vulnerable people. Typically, domiciliary care providers operate a low-paid, high churn employee model resulting in lower quality care for service users. CASA’s innovative employee-ownership model results in a more rewarding role for employees, leading to higher consistency and quality of care.

Our IMPACT Methodology

An Overview
We call our investment approach ‘impact-driven’ because we use impact as a lens to select and engage with our investments. By doing so, we seek to generate superior returns — both for investors and for society. What does this mean in practice? On the following pages, we describe our impact approach, breaking down the various dimensions of our analysis and providing illustrative case studies from our portfolio. We hope that these real life examples will bring our approach to life and prove useful to others.

Our philosophy
Over the last decade, we have developed a methodology and tools that, whilst not perfect, help us to make informed decisions within the bounds of what is practical (both proportional and affordable) and useful (allowing us to select and manage investments to create social value on a day-to-day basis). Our approach has 3 key elements: a specialist focus (‘Thematic’), a consistent process (‘Bridges’ SET’), clear criteria (‘Bridges IMPACT Radar’) and a collaborative attitude (‘Bridges’ IMPACT+’).

In this report, we provide an overview of our attitude (Bridges’ IMPACT+ approach to life and prove useful to others.

Dimensions of our analysis and providing our impact approach, breaking down the various elements: a specialist focus (‘Thematic’), a consistent process (‘Bridges’ SET’), clear criteria (‘Bridges IMPACT Radar’) and a collaborative attitude (‘Bridges’ IMPACT+’).

In addition to generating our impact approach, breaking down the various

In order to understand the potential impact of any investment as to understand its potential for impact return. We therefore consider impact returns and impact risks as they relate to each of our key criteria, in order to generate a risk/return profile for each investment. We also do this at the portfolio level, in order to understand the overall impact risk/return profile of each fund.

Bridges ‘SET’ process
Across our funds, we consistently follow a three-stage ‘SET’ process, which integrates impact analysis into the full investment cycle. As an impact investor, we select for impact: identifying investments whose product, location or business model will deliver our thematic outcomes. In addition to generating our specific target outcomes, we also support our portfolio companies to optimise their wider environmental, social and governance practices (ESG). We view this as a commercial-social-win-win: businesses that operate in a more sustainable way not only generate incremental impact but can also protect and enhance their commercial performance – be it through better energy management, progressive employee or customer engagement, or improved governance practices.

deal origination pre-approvals post-investment

Risk and Return
As with financial analysis, understanding the impact risk of an investment is as important as understanding its potential for impact return. Impact risks can take various forms. For example, there may be a lack of evidence that an intervention will lead to the desired outcome. Even if the intervention is successful, the investment could cause displacement, leading to reduced or no net benefit. Or, the investment may create positive change for its target beneficiary but a negative change for other stakeholders, which reduces or undermines its impact.

How do we use the IMPACT Radar?
On the following pages, we lay out our risk/return questions for each of the key criteria, along with our Scoring Guide for mapping a potential investment. Our scoring approach is subjective and indicative, rather than categorical. Pre-investment, we have found that it usefully summarises our investment team’s recommendation, in order to provide a basis for discussion. Post-investment, it acts as a portfolio management tool, so that we can monitor the impact risk/return profile of each investment (and therefore of each fund) on an ongoing basis.

How do we use the IMPACT Radar?

Our scoring approach is subjective and indicative, rather than categorical. Pre-investment, we have found that it usefully summarises our investment team’s recommendation, in order to provide a basis for discussion. Post-investment, it acts as a portfolio management tool, so that we can monitor the impact risk/return profile of each investment (and therefore of each fund) on an ongoing basis.
Target Outcomes

**Effective solutions to pressing societal needs represent significant growth opportunities**

From an impact perspective, we view each investment as a strategy to address a societal challenge. Our ‘Target Outcomes’ analysis therefore begins with identifying who is being affected by the problem (target beneficiary), what they need, the barrier to improvement and what the current response is.

From this background analysis, we can plot a Theory of Change: the series of theoretical stages necessary to address the challenge. To understand how an investment will convert theory into action, we then lay out the investment’s specific steps (the Logic Model) to deliver each stage of the Theory of Change.

This process enables us to analyse the investment’s potential impact in terms of scale, depth and systemic change (which signals potential ‘impact returns’). It also allows us to pressure test the causal links in the investment’s logic model – in other words, to question to what extent the ‘recipe’ is understood and the causality is evidenced (which signals the level of ‘impact risk’).

<td>A scientific study (e.g. control trial or longitudinal study) evidences causality, demonstrating that the investment is generating impact</td>
<td></td>
</tr>
</tbody>
</table>

As our scoring guide shows, the risk that our investment will achieve its target outcomes depends largely on the extent to which the efficacy of the investment’s logic model has been evidenced (in the same, or at least comparable, conditions). To help us gauge the impact risk we are taking, we rank an investment’s demonstrated efficacy at a Level 1, 2 or 3 (see scoring guide on opposite page). During the investment period, we aim to help each investee improve its level of demonstrated efficacy (proportionate to its own goals as an organisation), thereby reducing the risk of the model not achieving its target outcomes.

During Bridges’ investment in IAAM, a longitudinal study will be conducted by SLAM and Cass Business School to track the improved positive life outcomes of children registered onto the service (versus those remaining in the care system) over the 10-year life of the programme.

**Target Outcomes – Case Study**

**Bridges Social Impact Bond Fund**

**It’s All About Me (IAAM)**

It’s All About Me (IAAM) is a new service for the adoption sector. Structured as a Social Impact Bond, and developed by an 18-way network of Voluntary Adoption Agencies, Bridges’ investment in IAAM seeks to find, train and support adoptive families for children who are recognised as harder-to-place, and who otherwise would probably remain in care.

As an adoption agency, IAAM’s role is to assist Local Authorities in finding safe, permanent homes for children who are classified as ‘hard-to-place’. The Bridges’ investment in IAAM is intended to improve the agency’s engagement with children, and help create a model that ensures all children are adopted.

In addition to the direct outcomes of placing children into adoptive homes, the project also seeks to demonstrate wider benefits in terms of reduced crime and stigma, as well as positive outcomes for families.

The primary focus of IAAM is to help Local Authorities place children in adoptive households, thereby reducing the risk of the child remaining in care. As additional children are placed, the project will test the wider potential for systemic change (including price disruption and copy-cat models).

Notes:

*For example, attitudes towards cut-off ages, ethnic matching and placement with siblings.*
Additionality

Understanding our true value-add is key to both social and commercial performance

Our additionality analysis asks whether our targeted outcomes will occur anyway, without our investment. In this sense, additionality defines our impact, allowing us to tell our investors whether their funds are creating societal value. While our ‘return’ analysis challenges investor-level additionality – whether our target outcomes will happen anyway, without our capital – our risk analysis considers enterprise-level additionality: whether or not the investee will be delivering a greater quantity or higher quality of outcome than would otherwise occur.

Investor-level additionality

For our funds seeking market-rate returns, our investor-level analysis considers the extent to which Bridges is integral to the investment’s development and growth. For our Underserved Markets theme, our additionality lies in directing capital to investments in the most deprived 25% of the UK – to businesses which demonstrate strong links to their community through significant local job creation or supply-chain spend, or by serving local consumers as a target market. Today, over a third of our Underserved Markets investments are in the most deprived 10% of the country. Our decision to focus investment on these regions was rooted in the belief that there was insufficient growth capital readily available to support businesses in these markets. In other words, investor additionality was the driving force for developing Underserved Markets as a theme in the first place. For our other themes, our investor additionality considers whether, at a minimum, Bridges’ alignment with the investee’s social or environmental agenda will create non-monetary benefits that generate additional social value. More often, our additionality is due to our integral role in structuring or even creating an investment from scratch: in each of our funds, we look to incubate a number of businesses in-house (in which case, our investor- and investment-level additionality become one and the same).

Our Social Sector Funds provide flexible capital to sustainable, often profitable, business models that cannot attract commercial capital due to their structure or target market, or both. In this sense, investor additionality is more readily assumed, since such investees could not rely on the mainstream capital markets to support their growth. However, in co-investment situations, we still consider the extent to which Bridges leads the development of the investment (and therefore the leverage of additional capital), which signals an even higher level of investor-level additionality.

Enterprise-level additionality

At the enterprise level, our analysis assesses whether the social outcomes generated by the underlying investment will create a positive net benefit for society (typically through improved quality or quantity of outcome, or both) or, if not, the investment’s outcomes risk displacing comparable benefits.

Additionality – Case Studies

Bridges Sustainable Property Fund

Bridges Sustainable Property Fund has compared three highly sustainable care home developments in partnership with CastleOak, one of the UK’s leading healthcare developers. These developments have been developed to provide class environmentally-friendly facilities to the elderly, with specialist provision for dementia patients.

**Investor-level**: A key challenge of investing in properties that demonstrate environmental leadership is to ensure that sustainable construction methods are followed by energy efficient operating practices by the tenant. Through the Bridges Property Funds, we have learned that one way for an investor to break through this challenge is to partner closely with both the developer and operator, agreeing upfront on the ‘win-win’ strategy of creating and societal value. For example, by partnering closely with CastleOak and Barchester, we have agreed that an increased spend on environmental features will translate into lower energy costs over time (we expect a 6% uplift in design and building costs to be recouped by energy savings in just 8 years). As a result, we have incubated some of the UK’s most environmentally-friendly care homes.

CASA builds and develops employee-owned franchise companies to provide domiciliary care to older, disabled and vulnerable people. Typically domiciliary care providers operate a low-paid, high churn employee model resulting in lower quality care for service users. CASA’s innovative employee-ownership model results in more rewarding roles for employees, leading to higher consistency and quality of care. The Bridges Social Entrepreneurs Fund initially invested in CASA in 2011.

**Investor-level**: CASA aims to be a positive ethical force in everything it does and its social impact is far-reaching. As well as improving the quality of life for its service users by enabling them to live independently at home, CASA recruits and trains long-term unemployed people in low-income communities. CASA currently employs over 500 people, of whom 91% are from underserved areas, and is implementing a wide encompassing training approach that plans to deliver high quality training above industry standards to all its employee. Co-ownership is at the heart of CASA’s business, underpinned by the belief that engaged employee owners will both provide the highest quality and continuity of care, and support the reinvestment of dividends into staff and growth to make the business successful.

CASA and Share Associates (CASA)

Care and Share Associates (CASA)
Active management of our impact on key stakeholders both protects and enhances value

While we select companies that will generate our intended outcomes (through the high-impact products or services that they provide, or the economic growth that they generate in underserved communities), we also recognize that every investment has the potential to generate other societal outcomes, both positive and negative. We take these outcomes – which we call environment, society and governance factors (ESG) – into account in order to understand an investment’s total (or ‘net’) impact.

Managing risk
Prior to making an investment, our investment team works with the management team of the prospective portfolio company to identify ESG risks. To guide this discussion, we have developed an in-house risk assessment screen based on global best practices but adapted to fit the needs of investees operating in our areas of thematic focus. Our emphasis is on making this ESG risk screen as practical as possible – on making it a conversation about operational excellence. We use a materiality lens (see opposite page) to grade each risk as a high, medium or low priority and record the results on a risk register. For each material risk, we propose a mitigation plan in the Investment Committee paper, so that our investment decision is made with a holistic view of projected impact and a 100-day plan can be developed for immediately post-investment. Thereafter, ESG issues are reviewed regularly at Board meetings with investee companies, as well as at our own firm-level portfolio review meetings. Once a year, each investee provides a snapshot of any new or outstanding ESG issues, as well as progress against targets, through our IMPACT Scorecard (see page 23).

Spotting opportunity
We call ESG opportunities ‘win-wins’ because they improve social or environmental performance in ways that also improve business performance. While each investment has its own range of relevant ESG opportunities, our specialist focus on themes (and sub-sectors within themes) has allowed us to develop ‘rules of thumb’ for recognizing where opportunities might lie – for example, maximising quality of care for patients through independent clinical advisory boards in our healthcare companies; creating employment access through apprenticeship schemes in our businesses in underserved markets or minimising energy and water usage across our property (and property-backed) investments. While some ESG opportunities can be defined pre-investment, many emerge during the investment period, through a process of regular interaction and learning with the company and its stakeholders. We create an ESG matrix for each investment to capture how ESG factors and business success factors are acting hand-in-hand.

<th>G</th>
</tr>
</thead>
<tbody>
<tr>
<td>CO₂ emissions reduction</td>
<td>Qbic’s strategy of retro-fitting an existing old office building and actively pursuing sustainable construction and operations means that we can significantly reduce the new materials used, demolition waste going to landfill and energy consumption – as well as cost.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cost savings &amp; productivity</td>
<td>A sustainable strategy for the first site that results in a projected reduction of 30%+ CO₂ emissions over benchmarks for similar developments and faster planning permissions for site development.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>License to operate</td>
<td>Use of recyclable materials wherever commercially appropriate as part of the customer ‘sell’.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Talent attraction/ retention</td>
<td>Qbic aims to create a legacy through engagement with the local community. Boosting employment in the area, the hotel is recruiting at least 50% of its staff locally and partnering with the charities Food Cycle and Bike Works, both of which help to train and assist people back to work. Qbic will recruit approximately 20% of its staff from these charities. This community approach will ensure that employees at Qbic Hotel London City are from diverse backgrounds, have a wide range of talents and, most importantly, know just how to share the highlights of their local area with Qbic guests.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Materiality analysis
Our materiality analysis considers each type of risk from the perspective of all relevant stakeholders (including ourselves as investors), asking: Who is affected? How are they affected? How negative are the outcomes? How likely are they to occur? This allows us to score each risk on a risk register and to develop risk mitigation strategies for any risks categorised as high or medium priority.

Bringing it all together

An IMPACT Toolkit

Below, we summarise the key questions that make up the Bridges IMPACT Radar, along with the tools that support our judgement.

- Depth or scale?
- Underserved beneficiary group or society at-large?
- Systemic impact?

Target Outcomes

3 High
2 Medium
1 Low
0

Investor-level
Is Bridges integral to the development/performance of the investment?

Enterprise-level
Does the investment lead to outcomes which would not otherwise occur?

Alignment

Alignment of the investment’s generation of impact with its ability to deliver appropriate financial returns?

Spectrum of Capital

Alignment of the business model with its generation of impact?

Opportunity Matrix

Can any ESG risks be mitigated?

Risk Register

Can any ESG risks be mitigated?

Bringing it all together

Our IMPACT Scorecard

Pre-investment, the IMPACT Radar informs our due diligence of an opportunity. Post-investment, it acts as a portfolio management tool, so that we can monitor the impact risk/return profile of each investment (and therefore of each fund) on an ongoing basis. In order to track an investment’s performance against the IMPACT Radar, we work with each investee to determine the most appropriate key performance indicators (KPIs), which we then record on our IMPACT Scorecard.

If we get this right, the impact KPIs we track as an investor are simply smart business KPIs for our investees, demonstrating their positive contribution to society and their protection and enhancement of value for investors.
Bringing it all together

A selection of our recent exits

The Gym

- 65,000 first-time gym users leading healthier lives in inner city areas
- £20m supplier spend in underserved markets
- Pioneered 24/7 low-cost, accessible model, spawning numerous low-cost competitors (industry now provides access and affordability to millions of customers)

Enterprise additionality: Lower cost (first pay-as-you-go model, c.2-3x cheaper than joining the average mid-market UK gym) and greater accessibility (open 24/7 and majority of sites in underserved markets)

Investor additionality: Bridges incubated the investment in-house

ESG?

- Winner of Times ‘Best 100 small companies to work for’
- Over 70% of equipment is energy-efficient and cleaning uses 70% less water than conventional machines. The sites also employ sensor-controlled lighting, showers, WCs and hand basins.

Alignment?

- Lock-step between fast-growth consumer champion brand and the need for affordable sites in inner city areas that that create access to fitness in underserved inner city locations

Target Outcome(s)?

- Does the investment contribute to our target outcomes?

Additional?

- Positive change versus what would have happened anyway?

ESG?

- ESG risks or opportunities?

Alignment?

- Alignment between impact and financial returns?

Whelan

- Business recycled waste oil to produce base oil, selling back to the lubricant industry
- Successfully diverted over 100,000 tonnes of waste oil from use as a low grade fuel
- Generated net savings of over 300,000 tonnes
- Supported 31 jobs and contributed over £11m in supplier spend in underserved markets

Enterprise additionality: The first and only waste oil refining plant in the UK

Investor additionality: Bridges was the sole investor, enabling the re-furbishment and re-commissioning of a redundant oil refinery in Stoke

ESG?

- Strong focus on minimising the plant’s environmental impacts
- Commitment to employee development, with numerous employees achieving both the City & Guilds Certification and Certification in Process and Operations

Alignment?

- Lock-step between ability of plant to refine waste oil into virgin-grade oil products and growth in reduction of greenhouse gas emissions

Target Outcomes

- Does the investment contribute to our target outcomes?

Additional?

- Positive change versus what would have happened anyway?

ESG?

- ESG risks or opportunities?

Alignment?

- Alignment between impact and financial returns?

The Hoxton

- Build and operating a hotel on a disused, brownfield car park site in Hackney led to significant dynamism, with The Hoxton becoming a well-known part of the regeneration of Shoreditch in Hackney
- Over £10m+ (85%) of supplier spend underserved markets
- 40 jobs supported, with 73% of wage bill in underserved markets

Enterprise additionality: A hotel built from scratch on a disused, brownfield car park site, bringing significant spend, job creation and regeneration to the area

Investor additionality: Bridges was involved from the beginning of the project, working with the entrepreneur to design and build the hotel and playing the lead role in financing

ESG?

- Apprenticeship scheme offering placements to unemployed young local residents and sponsoring their education at a local college
- Support of local charitable initiatives, e.g. donating a day of revenue to Great Ormond Street Hospital and providing 20 beds for doctors and nurses

Alignment?

- Lock-step between value-for-money concept (requiring affordable location) and the ability to bring regeneration and tourism spend to a previously underserved market

Target Outcomes

- Does the investment contribute to our target outcomes?

Additional?

- Positive change versus what would have happened anyway?

ESG?

- ESG risks or opportunities?

Alignment?

- Alignment between impact and financial returns?
Bridges IMPACT+

A practitioner-led advisory function

Bridges is committed not only to promoting financial and societal returns through its own funds but also to supporting the growth of the wider sustainable and impact investment sector. It is in this spirit that we have established Bridges IMPACT+, an advisory function within Bridges. Each year, Bridges IMPACT+ takes on a small number of projects where we believe that our expertise in combining financial and social returns can make a real contribution to the growth of the market.

In the past year Bridges IMPACT+ has engaged with a broad range of leading organisations, including The Rockefeller Foundation, Mars Inc., Bank of America Merrill Lynch, Oxfam, Comic Relief and the African Private Equity & Venture Capital Association.

While many of our projects are bespoke to clients, we also disseminate public research whenever we see an opportunity to support the sector’s thinking. These range from market analysis to specific product development research.

Our research initiatives to-date include:

- The Power of Advice in the UK Sustainable and Impact Investment Market (2012)
- Spectrum of Capital – How we define the market (2013)
- Shifting the lens – A De-risking Toolkit for Impact Investment (2014)

We are very grateful for the ongoing support of our committed Board and Advisory Board, as well as our network of pro bono partners. We also thank our investors, without whom none of this would be possible and who include:

Pension Funds: West Midlands Pension Fund, South Yorkshire Pensions Authority, Merseyside Pension Fund, London Pensions Fund Authority, East Riding Pension Fund, Clydesdale Pension Fund, Universities Superannuation Scheme, Railways Pensions Trustee Company Ltd.

Families & Individuals: Lloyd Dorfman CBE, Richard Wilson, Chris Mathias, Sir Vernon Ellis, GW Lawson, Dr Mike Lynch OBE, Harvey McGrath, Jon Moulton, Richard Oldfield, Sir Harry Solomon.
