Lawrenceville, GA 30043

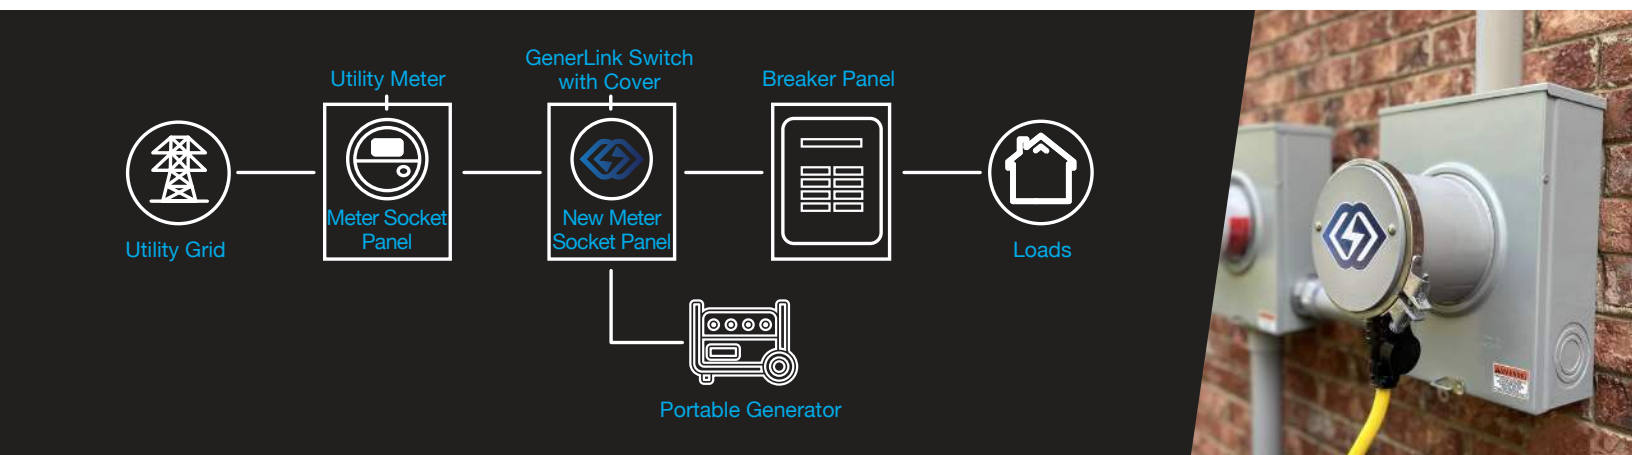

## Generlink Installation Options

1. Behind the utility meter which is done by your utility or a licensed electrician, the utility must approve the GenerLink. Call or visit our website to see if your utility is approved
2. In a standalone application in a meter panel downstream of the home's utility meter. This installation does not need the utility's approval and can be installed on any home by a licensed electrician.

# Trifecta

During a power outage, the Trifecta manual transfer switch safely connects your portable generator power to your home.

Manual operation lets you easily control whether your home is connected to the utility grid, an alternate source, or neither. A convenient, three-position handle ensures your home is disconnected from the utility grid before an alternate power source is connected, preventing back feeding and protecting essential utility line workers.
