

iKlip® Grip

CONFIDENTIAL INFORMATION: DO NOT DISTRIBUTE WITHOUT PERMISSION

Four-in-one video accessory for smartphone

Available Q2, 2015

iKlip Grip is a mounting system for videographers that provides a handheld grip, mini-tripod, monopod extender and tripod adapter for any smartphone or phablet, in a conveniently portable package.

iKlip Grip features a smartphone holder with brackets that expand to securely hold devices with screen sizes ranging from 3.5" to 6".

Designed for effortless stable video recording, iKlip Grip's holder is supported by a handle with three folding legs that can be used as either a tabletop tripod or handheld grip.

With iKlip Grip, videographers will always get a great angle thanks to its ball mount, which can be adjusted up to 90°, and its detachable telescoping pole, which provides up to 60cm of additional height.

iKlip Grip's handle can also be used as a camera tripod or as a tabletop microphone stand or handheld mini boom thanks to its standard 1/4" threaded mount. Likewise, its smartphone holder can also be detached for use with tripods and other stands.

iKlip Grip makes it easy for anyone to create professional-quality video anytime and everywhere. It's the perfect companion to IK's compact audio/video microphones, like iRig Mic Field or iRig Mic Cast.
