

DIGIT 200

A versatile remote that can be used with up to 4 external switches, the DIGIT 200 is a great solution for performers, teachers, presenters, etc. Two cable adapters and USB charging cable provided.

A Multi-Function Bluetooth Remote for Tablets and Computers!

Silent, tactile buttons provide the ability to turn pages, control teleprompter apps, and advance presentation slides, as well as remote control for iTunes and other media. The DIGIT 200 also has the ability to control phone and tablet cameras for remote video and photos. Even control MIDI apps!

Add Your External Switches!

Attach any momentary switch to set up the perfect control system for your application.

In addition to being a handheld remote, the AirTurn DIGIT 200 can be controlled by a wide variety of pedals and momentary switches for hands-free control. Use your rugged Boss FS-5U, FS-6, FS-7, or the Airturn silent ATFS-2. Up to four pedals can be connected to the AirTurn DIGIT 200's stereo ports using optional splitter cables.

If you have your own FS-5U, FS-6 or FS-7 pedals, purchase AirTurn's custom-made cables, or download instructions to make your own patch cable for using the AirTurn DIGIT 200. Just about any momentary normally open (NO) switch will work with the DIGIT 200.

Use AirTurn bite and tongue switches for hands- and foot-free control.
