

## Programming codes for LS2208 and LS4278 barcode scanners

1) Scan this barcode

Reset All Defaults

2) Wait 10 seconds

3) If the scanner is wireless:

Dock the scanner, wait for 5 seconds, undock it and scan the bar code located on top of the base. Wait for the beep. This tells the scanner which base to communicate with.

At this time, if the scanner is an LS4278 wireless scanner, scan the barcode at the bottom of this sheet to turn off the "wavy laser" raster scanning.

It's at the bottom of the sheet because it's easier to aim at it with the "wavy laser"

---

Scan the 6 bar codes below. Start at the top and go to the bottom.

1 2 of 5 any length

Enable MSI

Enable GS1 Databar Limited

Scan Options

<DATA><SUFFIX>

Enter

Your scanner is now programmed and ready to use

---

Use this barcode to stop raster scanning on LS4278 wireless scanner

Single-line Only  
(No Raster)
