Hang on wall in areas where a fire emergency can occur

Home fires are one of the most common emergencies experienced by Canadians. Smoke detectors and fire extinguishers are essential fire safety items in our homes, but no fire plan is complete unless you have an FAC Fire Blanket. It is an essential device that can save you and your home from disaster.

With over 25,000 fires per year in Canada, the key to saving your home is to act fast. Use the FAC Fire Blanket to safely eliminate a fire before it gets out of control.

Our wall mounted and compact fire blanket can be placed in an easily accessible area for quick use in case of fire. Just pull the tabs to release the blanket and toss it over the small fire to instantly suffocate it. Can also be used to wrap around your body and act as a heat shield.

No heavy equipment or complex instructions to follow, anyone from kids to the elderly can use it without any training. Our fire blanket is lightweight and ready to use right out of the pouch.

Fire extinguishers are essential and work great but they leave a white powdery mess after use, adding to an already stressful experience with a long clean up. The FAC fire blanket eliminates the fire and the mess.

The FAC fire blanket can be used on most fires that are small enough for the blanket to cover, including fires caused by grease, paper and wood.

Made of 100% compact structure fiberglass fabric it can be reused multiple times. It will never expire, as long as the blanket is in good condition and not damaged after use, you can wipe it off and fold it back into the pouch where it will be ready in case of a future fire emergency.

Specifications:
• Made of 100% compact structure fiberglass fabric
• Suitable for extinguishing small fires or burning clothes
• Can be used as a radiant heat shield to aid in escaping fires
• Comes in a nylon storage bag with hanging grommets
• Quick release tabs for easy use in an emergency
• Product weight: 3 lbs
• Meets Standard EN1869:2019
