AARDVARK is excited to announce its new partnership with HECS. Effective immediately, AARDVARK will act as the sole domestic Law Enforcement and Military provider of the HECS product line.

When asked about this new partnership, AARDVARK's CEO Jon Becker stated "AARDVARK is thrilled to be able to introduce such an innovative technology to our Law Enforcement and Military clients. Often the success of a mission is determined by the smallest details. The ability to remain undetected is critical for operator safety and we believe that HECS adds an edge that will make a difference in these situations."

Mike Slinkard, President of HECS stated, "We're very excited about our partnership with AARDVARK and expect this relationship to allow us to reach even more operators with our paradigm changing technology. The ability to infil/exfil is critical to maintaining the element of surprise. HECS' Stealthscreen technology reduces human electromagnetic signature to help ensure neither electromagnetic based detection systems nor local wildlife are disturbed or give away the operator's position."
