**CUSTOM LIGHTING**

Pendant lights with amber acrylic diffusers brings dimension to the lighting, creating a warm comfortable environment.

**CARPET DESIGN**

A custom carpet was created to establish movement and energy throughout the casino. Warm energetic colors weaving through cool blue hues to complement each other and create a rippling effect.

**TRIBAL ELEMENTS**

To honor the heritage of the Creek Nation, the twelve clans symbols were incorporated into the new design plan, as shown in this section of the gaming floor as well as the cafe.

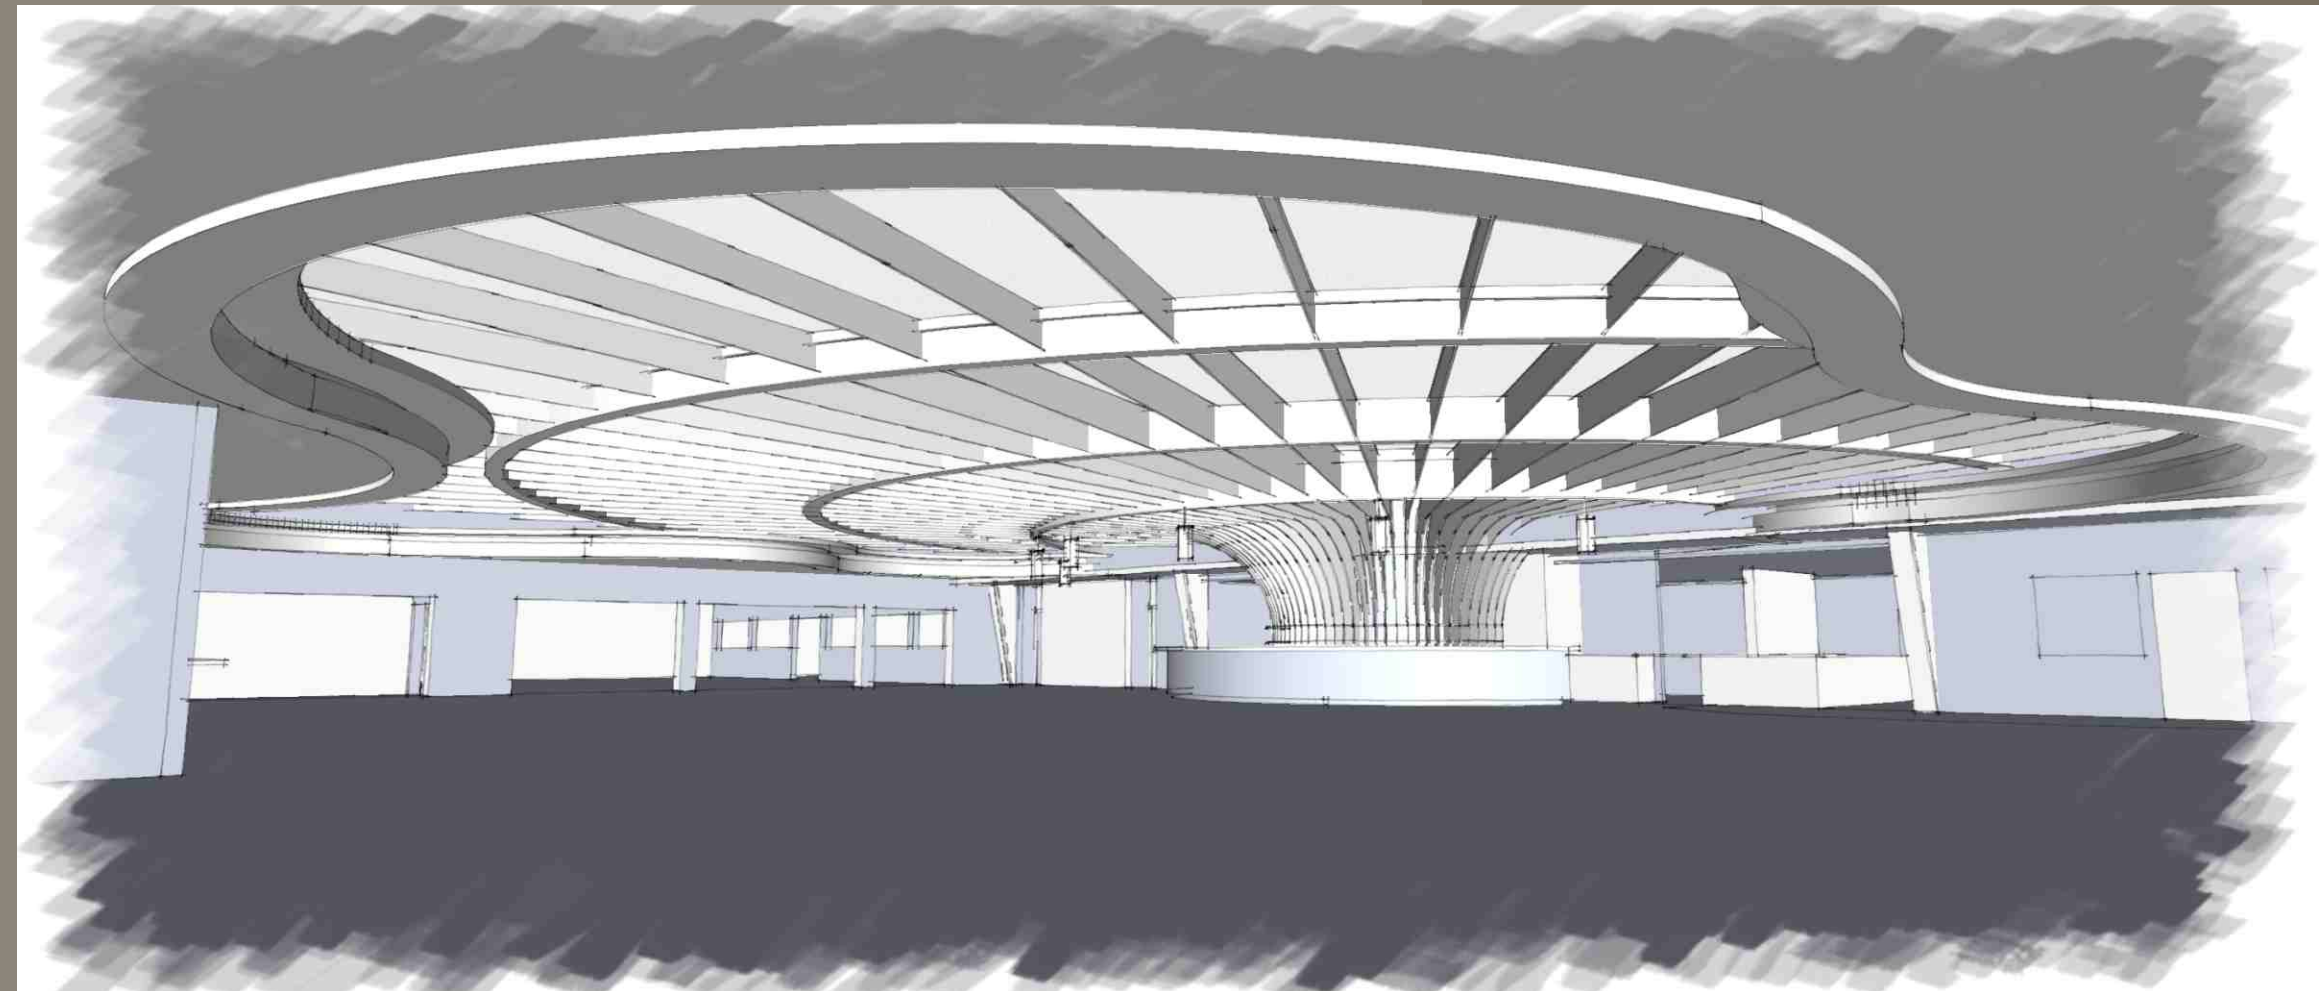

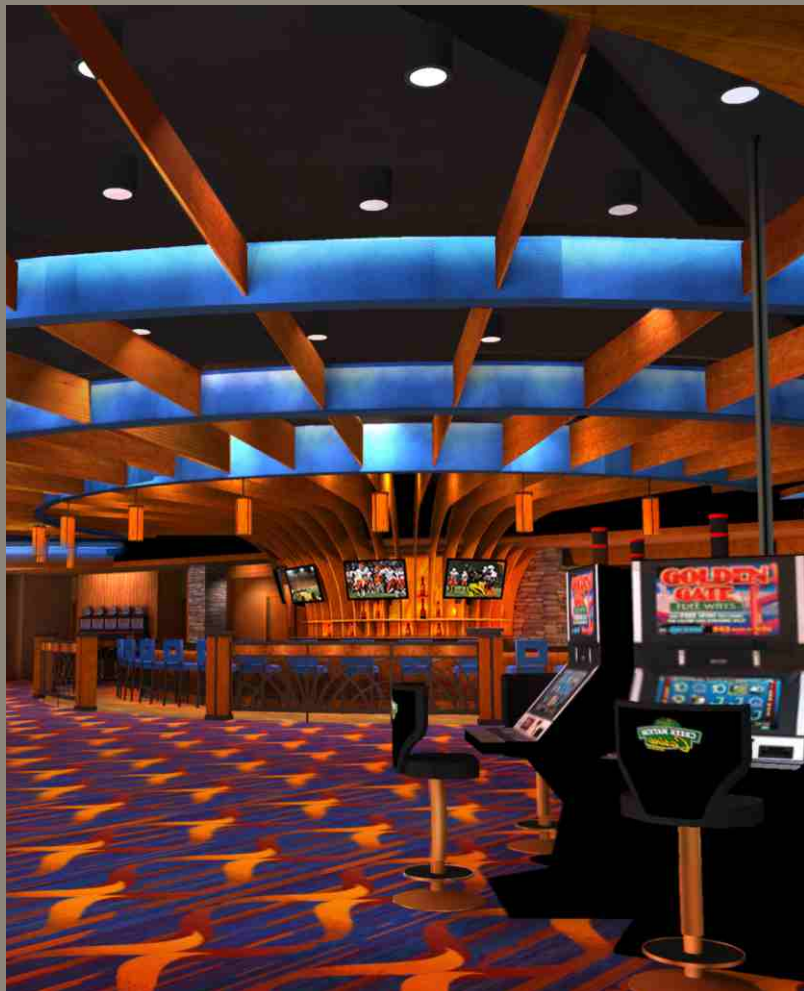

## CONCEPT TO COMPLETION

The design team worked to create a plan which would create a very high-impact, beautiful gaming space; while working around the existing infrastructure and MEP systems for the most streamlined upgrade. The once dark and dated gaming floor was transformed into a warm and welcoming environment.

The I-5 production teams worked to completely transform the entire interior while dramatically reducing the downtime and disruption to the casino operations. The main gaming floor remodel was completed in under 4 weeks onsite. All of the large overhead beam structures, curving overhead soffits, custom décor features, signage, and unique lighting elements were prefabricated and pre-assembled at I-5's state-of-the-art production facility so they could be implemented in an efficient and streamlined manner.

### FURNISHINGS

Custom furnishings were selected to highlight the bar area and café while providing comfortable seating areas for guests.

### ARCHITECTURAL DETAILS

Decorative half walls with custom metalwork and accent finishes provided an elegant way to separate the space while allowing customers to still feel like they are part of the gaming floor action.

### SPECIALTY MATERIALS

Warm wood veneer combined with specialty metals and bright accent colors, worked together to create a very dynamic and exciting environment for casino guests.

### CENTER BAR

Located on the gaming floor, the center bar was created at the center of the new radiating beam structure. This central element curves up and branches overhead to resemble the characteristics of a tree branching out. The natural color scheme and organic materials unite the space and invite relaxation, while amber pendants add warmth and vibrant LED's bring a sharp interjection of color to the scheme.
