I. INTRODUCTION

1. Meta Platforms, Inc., Facebook Holdings, LLC, Facebook Operations, LLC, Meta Payments Inc., Meta Platform Technologies, LLC, Instagram, LLC, Siculus, Inc., Snap Inc., TikTok Inc., ByteDance Inc., Google LLC, and YouTube, LLC (collectively, “**Defendants**”) design, market, promote, and operate social media platforms. Over the past decade, each has grown their respective platforms exponentially, from millions to billions of users. And Defendants have grown not just their user bases, but the frequency with which users use their platforms and the time each user spends on their platforms. Defendants’ growth is a product of choices they made to design and operate their platforms in ways that exploit the psychology and neurophysiology of their users into spending more and more time on their platforms. These techniques are both particularly effective and particularly harmful to the youth audience Defendants have intentionally cultivated. The result—entirely foreseeable—is that today’s children and teenagers spend excessive amounts of time on Defendants’ platforms at great cost to their mental health. Defendants have created a mental health crisis among America’s youth.

2. Defendants have done so for profit. Their business models are based on advertisements. The more time users spend on their platforms, the more ads Defendants can sell.

3. Youth are central to Defendants’ business models. Youth are more likely to have a phone, to use social media, and to have downtime to spend on Defendants’ social media platforms. Plus, youth influence the behavior of their parents and younger siblings. As one Defendant put it, “los[ing] the teen foothold in the U.S.[.]” would mean “los[ing] the pipeline” for growth.¹

4. Defendants have maximized the time users—particularly youth—spend on their platforms by purposely designing, refining, and operating them to exploit the neurophysiology of the brain’s reward systems to keep users coming back, coming back frequently, and staying on the respective platforms for as long as possible.

5. Youth are particularly susceptible to Defendants’ manipulative conduct because

¹ Sheera Frenkel *et al.*, *Instagram Struggles with Fears of Losing Its ‘Pipeline’: Young Users*, N.Y. Times (Oct. 26, 2021), <https://www.nytimes.com/2021/10/16/technology/instagram-teens.html>.

1 their brains are not fully developed, and they consequently lack the emotional maturity, impulse
2 control, and psychological resiliency that other, more mature users generally possess.

3 6. Defendants have successfully exploited the vulnerable brains of youth, hooking
4 tens of millions of students across the country into positive feedback loops of excessive and
5 problematic use of Defendants’ social media platforms. Worse, the content Defendants curate
6 and direct to youth is too often harmful and exploitive (e.g., promoting a “corpse bride” diet,
7 eating 300 calories a day, or encouraging self-harm).

8 7. Defendants’ misconduct has been a substantial factor in causing a youth mental
9 health crisis, which has been marked by higher and higher proportions of youth struggling with
10 anxiety, depression, thoughts of self-harm, and suicidal ideation. The rates at which children
11 have struggled with mental health issues have climbed steadily since 2010 and, by 2018, made
12 suicide the second leading cause of death for youth. The pandemic and the corresponding
13 increase in time youth spend on Defendants’ platforms has only intensified this crisis.

14 8. The state of children’s mental health led the American Academy of Pediatrics, the
15 American Academy of Child and Adolescent Psychiatry, and the Children’s Hospital Association
16 to jointly declare a national emergency, and the U.S. Surgeon General to issue an advisory “to
17 highlight the urgent need to address the nation’s youth mental health crisis.”²

18 9. In his 2022 State of the Union Address, President Joe Biden also called attention
19 to the harm social media has wrought on youth and implored all to “hold social media platforms
20 accountable for the national experiment they’re conducting on our children for profit.”³

21 10. Plaintiff Mesa Public Schools (“**Plaintiff**” or “**MPS**”) brings this action to do just
22 that. Youth in Plaintiff’s community are experiencing the same mental health crisis observed
23

24 ² AAP-AACAP-CHA Declaration of a National Emergency in Child and Adolescent Mental
25 Health, Am. Acad. Pediatrics (Oct. 19, 2021), <https://www.aap.org/en/advocacy/child-and-adolescent-healthy-mental-development/aap-aacap-cha-declaration-of-a-national-emergency-in-child-and-adolescent-mental-health/>; U.S. Surgeon General Issues Advisory on Youth Mental
26 Health Crisis Further Exposed by COVID-19 Pandemic, U.S. Dep’t Health & Hum. Servs.
27 (Dec. 7, 2021), <https://www.hhs.gov/about/news/2021/12/07/us-surgeon-general-issues-advisory-on-youth-mental-health-crisis-further-exposed-by-covid-19-pandemic.html>.

28 ³ President Biden, State of the Union Address (Mar. 1, 2022) (transcript available at <https://www.whitehouse.gov/state-of-the-union-2022/>).

1 nationally. The East Valley, where Plaintiff is located, has seen drastic increases in suicides.
2 From March to June 2022, at least eight teens died because of suicide or a drug overdose.⁴ In
3 2021, roughly one in five Arizona teenagers had thoughts of suicide.⁵ Suicide is now the third
4 leading cause of death of children in Arizona.⁶ Many school-aged children in Arizona also suffer
5 from anxiety, depression, and other mental disorders. In response to these stark numbers, the
6 Arizona House of Representatives has formed a special committee on teen mental health,⁷ and
7 Governor Katie Hobbs has called for prioritizing the hiring of social workers and counselors for
8 Arizona schools “to address the mental health crisis among children and teens.”⁸

9 11. Students experiencing anxiety, depression, and other mental health issues perform
10 worse in school, are less likely to attend school, are more likely to engage in substance use, and
11 are more likely to act out, all of which directly affects Mesa Public Schools’ ability to fulfill its
12 educational mission.

13 12. That is why Plaintiff, like 96 percent of other school districts in the United States,
14 provides mental health services to its students. For example, Plaintiff trains its teachers and staff
15 to screen students for mental health symptoms and refer them to services, such as those offered
16 by the school-based health clinics it operates in partnership with behavioral health agencies. But
17 Plaintiff needs a comprehensive, long-term plan and funding to drive a sustained reduction in the
18 record rates of anxiety, depression, suicidal ideation, and other tragic indices of the mental health
19 crisis its youth are experiencing at Defendants’ hands.

II. JURISDICTION AND VENUE

13. This Court has original jurisdiction over this action pursuant to Article VI, Section 10 of the California Constitution.

14. This Court has general personal jurisdiction over Defendants because each are headquartered and/or have their principal places of business in the State of California and have continuous and systematic operations within the State of California.

15. The Court also has specific personal jurisdiction over Defendants because they actively conduct substantial business in Los Angeles County and the State of California. Defendants have purposefully availed themselves of the privilege of conducting business in this State through the design, development, programming, promotion, marketing, operations, and distribution of their platforms at issue in this lawsuit and have purposefully directed their activities toward the State of California. Defendants have sufficient minimum contacts with the State of California to render the exercise of jurisdiction by this Court permissible under California law and the United States Constitution.

16. Venue is proper in this judicial district pursuant to California Code of Civil Procedure Sections 395 and 395.5 because at least some Defendants reside in this County, their principal places of business are in this County, and a substantial part of the events or omissions giving rise to the claims at issue in this Complaint arose in this County.

III. PARTIES

A. Plaintiff

17. Plaintiff Mesa Public Schools (“**Plaintiff**” or “**MPS**”), incorporated as Mesa Unified School District #4, is the largest public school district in Arizona, serving approximately 58,000 students in 78 schools. Mesa Public Schools is located in Maricopa County, Arizona, the most populous county in Arizona and the fourth most populous county in the United States.

B. Facebook and Instagram Defendants

18. Defendant Meta Platforms, Inc. (“**Meta**”), formerly known as Facebook, Inc., is a Delaware corporation with its principal place of business in Menlo Park, California.

19. Defendant Meta develops and maintains social media platforms, communication

platforms, and electronic devices that are widely available to users throughout the United States. The platforms developed and maintained by Meta include Facebook (including its self-titled app, Marketplace, and Workplace), Messenger (including Messenger Kids), Instagram, and a line of electronic virtual reality devices and services called Meta Quest (collectively, “**Meta platforms**”).

20. Meta transacts or has transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with its subsidiaries (identified below), Meta has advertised, marketed, and distributed the Meta platforms to consumers throughout the United States. At all times material to this Complaint, Meta formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

21. Defendant Meta’s subsidiaries include Facebook Holdings, LLC; Facebook Operations, LLC; Meta Payments Inc.; Meta Platforms Technologies, LLC; Instagram, LLC; and Siculus, Inc.

22. Defendant Facebook Holdings, LLC (“**Facebook Holdings**”) was organized under the laws of the state of Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook Holdings is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of Facebook Holdings.

23. Defendant Facebook Operations, LLC (“**Facebook Operations**”) was organized under the laws of the state of Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. The principal place of business of Facebook Operations is in Menlo Park, California. Defendant Meta is the sole member of Facebook Operations.

24. Defendant Meta Payments Inc. (“**Meta Payments**”) was incorporated in Florida on December 10, 2010, as Facebook Payments Inc. In July 2022, the entity’s name was amended to Meta Payments Inc. Meta Payments is a wholly owned subsidiary of Meta Platforms, Inc. Meta Payments manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

25. Defendant Meta Platforms Technologies, LLC (“**Meta Technologies**”) was organized under the laws of the state of Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. In November 2018, the entity’s name was amended to Facebook Technologies, LLC. In June 2022, the entity’s name was amended again, this time to Meta Platforms Technologies, LLC. Meta Technologies develops Meta’s virtual and augmented reality technology, such as the Meta Quest line of services, among other technologies related to Meta’s platforms, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of Meta Technologies.

26. Defendant Instagram, LLC (“**Instagram**”) was founded by Kevin Systrom and Mike Krieger in October 2010 and is a social media platform designed for photo and video sharing. In April 2012, Meta purchased the company for approximately \$1 billion. Meta reformed the limited liability company under the laws of the state of Delaware on April 7, 2012, and the company’s principal place of business is in Menlo Park, California. Defendant Meta is the sole member of Instagram.

27. Defendant Siculus, Inc. (“**Siculus**”) was incorporated in Delaware on October 19, 2011. Siculus is a wholly owned subsidiary of Meta, which supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, California.

C. Snap Defendant

28. Defendant Snap Inc. (“**Snap**”) is a Delaware corporation with its principal place of business in Santa Monica, California. Snap transacts or has transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with others, Snap has advertised, marketed, and distributed the Snapchat social media platform to consumers throughout the United States. At all times material to this Complaint, Snap formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

D. TikTok Defendants

29. Defendant TikTok Inc. was incorporated in California on April 30, 2015, with its

principal place of business in Culver City, California. TikTok Inc. transacts or has transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with others, TikTok Inc. has advertised, marketed, and distributed the TikTok social media platform to consumers throughout the United States. At all times material to this Complaint, acting alone or in concert with ByteDance Inc., TikTok Inc. formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

30. Defendant ByteDance Inc. (“**ByteDance**”) is a Delaware corporation with its principal place of business in Mountain View, California. ByteDance transacts or has transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with others, ByteDance has advertised, marketed, and distributed the TikTok social media platform to consumers throughout the United States. At all times material to this Complaint, acting alone or in concert with TikTok Inc., ByteDance formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

E. YouTube Defendants

31. Defendant Google is a limited liability company organized under the laws of the state of Delaware, and its principal place of business is in Mountain View, California. Google LLC is a wholly owned subsidiary of XXVI Holdings Inc., and the managing member of YouTube, LLC. Google LLC transacts or has transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with others, Google LLC has advertised, marketed, and distributed its YouTube video sharing platform to consumers throughout the United States. At all times material to this Complaint, acting alone or in concert with YouTube, LLC, Google LLC formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

32. Defendant YouTube, LLC is a limited liability company organized under the laws of the state of Delaware, and its principal place of business is in San Bruno, California. YouTube, LLC is a wholly owned subsidiary of Google LLC. YouTube, LLC transacts or has

transacted business in this District and throughout the United States. At all times material to this Complaint, acting alone or in concert with Defendant Google LLC, YouTube, LLC has advertised, marketed, and distributed its YouTube social media platform to consumers throughout the United States. At all times material to this Complaint, acting alone or in concert with Google LLC, YouTube, LLC formulated, directed, controlled, had the authority to control, or participated in the acts and practices set forth in this Complaint.

IV. FACTUAL ALLEGATIONS

A. Millions of Youth Have Become Excessive and Problematic Users of Social Media

33. Researchers studying the effect social media⁹ has on the brain have shown that social media exploits “the same neural circuitry” as “gambling and recreational drugs to keep consumers using their products as much as possible.”¹⁰

34. As described below, each Defendant designed and marketed its exploitive social media platform(s) to be extremely popular with youth. And they have been successful. Ninety percent of children ages 13–17 use social media.¹¹ Even younger children also regularly use social media. One study reported that 38 percent of children ages 8–12 used social media in 2021.¹² Other studies reveal numbers as high as 49 percent for children ages 10–12 and 32 percent for children ages 7–9.¹³

35. The most popular of these platforms among youth is YouTube. Ninety-five

⁹ The term “social media” is commonly used to refer to text, photos, videos, and ideas that are exchanged among virtual communities. The interactive technologies that allow for the virtual exchange of these media among networks of users are known as social media platforms.

¹⁰ *Social Media Addiction*, Addiction Ctr, <https://www.addictioncenter.com/drugs/social-media-addiction/#:~:text=Due%20to%20the%20effect%20that,when%20taking%20an%20addictive%20substance> (last visited Dec. 8, 2022).

¹¹ *Social Media and Teens*, Am. Acad. Child & Adolescent Psychiatry (Mar. 2018), https://www.aacap.org/AACAP/Families_and_Youth/Facts_for_Families/FFF-Guide/Social-Media-and-Teens-100.aspx.

¹² Victoria Rideout et al., *The Common Sense Census: Media Use by Tweens and Teens, 2021* at 5, Common Sense Media (2022), https://www.common Sense Media.org/sites/default/files/research/report/8-18-census-integrated-report-final-web_0.pdf.

¹³ *Sharing Too Soon? Children and Social Media Apps*, C.S. Mott Child.’s Hosp. Univ. Mich. Health (Oct. 18, 2021), https://mottpoll.org/sites/default/files/documents/101821_SocialMedia.pdf.

1 percent of children ages 13-17 have used YouTube.¹⁴

2 36. TikTok has skyrocketed in popularity with teenagers since its merger with
3 Musical.ly in 2018. As of July 2020, “TikTok classified more than a third of its 49 million *daily*
4 users in the United States as being 14 years old or younger[,]” and that likely underestimates
5 those under 14 and older teenagers (i.e., those between 15 and 18 years old) because TikTok
6 claims not to know how old a third of its daily users are.¹⁵ TikTok is now the second most
7 popular social media platform among youth, with over 67 percent of children ages 13–17 having
8 used the app.¹⁶

9 37. Instagram’s numbers are comparable to TikTok, with 62 percent of children ages
10 13–17 reporting they have used the app.¹⁷

11 38. Snapchat also remains popular with youth, with 59 percent of children ages 13–17
12 reporting they have used the app.¹⁸

13 39. Facebook rounds out the five most popular social media platforms, with 32
14 percent of children ages 13–17 reporting they have used Facebook’s app or website.¹⁹

15 40. Teenagers who use these social media platforms are also likely to use them every
16 day. One study estimates that 62 percent of children ages 13–18 use social media every day.²⁰ An
17 increasing number of younger children also use social media daily with 18 percent of children
18 ages 8–12 reporting using a social media site at least once a day.²¹

²¹ *Id.* at 5.

41. Daily use for many teenagers does not consist of logging onto a platform just once. Rather, many teenage users check social media repeatedly throughout the day. In one study, teenage users reported checking Snapchat thirty times a day on average.²²

42. Even more alarming, some teenagers never stop looking at social media.²³

43. As shown in the chart below, nearly 20 percent of teens report using YouTube almost constantly.²⁴ TikTok and Snapchat are close behind, with near constant use rates among teens at 16 percent and 15 percent respectively.²⁵ Meanwhile, 10 percent of teens use Instagram almost constantly.²⁶ And two percent of teens report using Facebook almost constantly.²⁷

Note: Teens refer to those ages 13 to 17. Those who did not give an answer are not shown.

Figures may not add up to the NET values due to rounding.

²⁴ *Id.*

²⁵ *Id.*

²⁶ *Id.*

²⁷ *Id.*

1 stop using it. Thirty-six percent of teenagers admit they spend too much time on social media.²⁸
2 And over half of teens say that giving up social media would be somewhat hard, with nearly one-
3 in-five teens saying giving up social media would be very hard.²⁹ And of the subgroup of
4 teenagers who use at least one platform “almost constantly,” 71 percent said giving up social
5 media would be hard, with 32 percent saying giving up social media would be very hard.³⁰

6 45. The more that teenagers use social media, the harder they find it to give up.
7 Teenagers who say they spend too much time on social media are almost twice as likely to say
8 that giving up social media would be hard as teens who see their social media usage as about
9 right.³¹

10 46. Another study shows that among teenagers who regularly use social media, 32
11 percent “wouldn’t want to live without” YouTube.³² Twenty percent of teenagers said the same
12 about Snapchat; 13 percent said the same about both TikTok and Instagram; and 6 percent said
13 the same about Facebook.³³

14 47. Despite using social media frequently, most youth do not enjoy it. Only 27
15 percent of boys and 42 percent of girls ages 8–18 reported enjoying social media “a lot” in
16 2021.³⁴

17 **B. Research Has Confirmed the Harmful Effects of Social Media on Youth**

18 48. Social media use—especially excessive use—has severe and wide-ranging effects
19 on youth mental health. Social media use is linked to increases in mental, emotional,
20 developmental, and behavior disorders. Independent research and internal data from these social
21 media platforms show social media has a direct negative impact on teenagers’ mental health on
22 various fronts.

28 ³³ *Id.*

³⁴ *Id.* at 34.

49. In general, moderate or high rates of any electronic screen use are associated with lower psychological well-being for children and adolescents.³⁵ Those with high screen time (7+ hours/day) are twice as likely to receive diagnoses of depression, anxiety, or need treatment for mental or behavior health conditions compared to low-screen-time users (1 hour/day).³⁶

50. Researchers have found that high-volume social media use is associated with increased levels of depression and anxiety for adults.³⁷ Social media has particularly detrimental effects on the mental health of adolescents. Depressive symptoms, suicide-related outcomes, and suicide rates among adolescents increased between 2010 and 2015, at the same time that youth use of social media increased.³⁸ Researchers examining the link between these increases found that adolescents who spent more time on screen activities were significantly more likely to have high depressive symptoms or have at least one suicide-related outcome, and that the highest levels of depressive symptoms were reported by adolescents with high social media use and fewer in-person social interactions.³⁹

51. One of the primary reasons the use of social media is associated with depressive symptoms among adolescents is because it encourages unhealthy social comparison and feedback-seeking behaviors.⁴⁰ Because adolescents spend a majority of their time on social media looking at other users' profiles and photos, rather than updating their own profiles, they

³⁵ Jean M. Twenge & W. Keith Campbell, *Associations between screen time and lower psychological well-being among children and adolescents: Evidence from a population-based study*, 12 *Prev. Med. Rep.* 271–83 (2018), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6214874/>.

are likely to engage in negative comparisons with their peers.⁴¹ Specifically, adolescents are likely to engage in harmful upward comparisons with others they perceive to be more popular.⁴²

52. Clinicians have also observed a clear relationship between youth social media use and disordered eating behavior.⁴³ One study found that the more social media accounts an adolescent has, the higher their scores on evaluations of disordered eating behaviors and cognitions.⁴⁴ Additionally, the study found that, for girls, greater daily time spent using Instagram and Snapchat was associated with significantly higher scores on evaluations of disordered eating behaviors.⁴⁵

53. Social media use also contributes to sleep deprivation. Young adults who spend a lot of time on social media during the day or check it frequently throughout the week are more likely to suffer sleep disturbances than their peers who use social media infrequently.⁴⁶ In turn, disturbed and insufficient sleep is associated with poor health outcomes.⁴⁷ One study found that young children are losing approximately one night's worth of sleep every week, staying up to use social media or even waking themselves up in the middle of the night to check notifications, driven by fear of missing out.⁴⁸

54. Defendants exacerbate the disruption of sleep by sending push notifications and

⁴⁷ *Id.*

⁴⁸ See, e.g., Beatrice Nolan, *Kids are waking up in the night to check their notifications and are losing about 1 night's worth of sleep a week, study suggests*, Bus. Insider (Sept. 19, 2022), <https://www.businessinsider.com/social-media-costing-children-one-night-sleep-study-2022-9> (approximately 12.5% of children report waking up to check social media notifications).

1 emails either at night when children should be sleeping or during school hours when they should
2 be studying, thereby prompting children to re-engage with Defendants’ platforms at times when
3 using them is harmful to their health and well-being.

4 55. Further, children are especially vulnerable to developing harmful behaviors
5 because the prefrontal cortex is not fully developed in children and teens.⁴⁹ Consequently, they
6 find it particularly difficult to exercise the self-control required to regulate their own use of
7 Defendants’ platforms. In this regard, self-regulation allows people to delay gratification,
8 postponing an immediate reward for a better reward later. Adolescents’ low capacity for self-
9 regulation means they are particularly vulnerable to the immediately pleasurable, but ultimately
10 harmful, effects of the repeated dopamine spikes caused by an external stimulus, such as “likes”
11 that activate the reward system in the brain.⁵⁰

12 56. As discussed in further detail *infra* Section IV.D, these reward-based learning
13 systems “contribute to the maintenance of excessive usage patterns.”⁵¹ Researchers investigating
14 the “directionality between social networking [platforms] and problematic use,” have found that
15 “increases in the intensity of use . . . predict[] problematic use.”⁵² And empirical studies have
16 found that problematic use is associated with “insomnia, stress, relationship dissatisfaction,
17 anxiety, social anxiety, and depressive symptoms.”⁵³

18 57. In this regard, adolescents are especially vulnerable to long-term harm from
19 Defendants’ platforms because excessive and problematic use can disrupt their brains’
20 development at a critical stage.

21 **C. As a Result, America’s Youth Are Facing a Mental Health Crisis**

22 58. The number of youth using Defendants’ social media platforms and the intensity
23 of such use have both increased significantly since 2008, which has contributed to a wide range

1 of negative effects on youth mental health. Over that same time the number of youth
2 experiencing depression, contemplating suicide, seeking emergency room help for mental health
3 issues and—tragically—committing suicide has skyrocketed.

4 59. These issues led the United States Surgeon General to issue an advisory on youth
5 the mental health crisis in December 2021.⁵⁴ In issuing the advisory, the Surgeon General noted,
6 “[m]ental health challenges in children, adolescents, and young adults are real and widespread.
7 Even before the pandemic, an alarming number of young people struggled with feelings of
8 helplessness, depression, and thoughts of suicide—and rates have increased over the past
9 decade.”⁵⁵

10 60. While the report highlights ways in which the COVID-19 pandemic has
11 exacerbated mental health issues for American youth, it also highlights the mental health
12 challenges youth faced before the pandemic. Specifically, the report notes that before the
13 pandemic, “mental health challenges were the leading cause of disability and poor life outcomes
14 in young people.”⁵⁶

15 61. In fact, before the pandemic, one in five children ages 3–17 in the United States
16 had a mental, emotional, developmental, or behavior disorder.⁵⁷

17 62. From 2009 to 2019, the rate of high school students who reported persistent
18 feelings of sadness or hopelessness increased by 40 percent (to one out of every three kids).⁵⁸
19 The proportion of kids seriously considering attempting suicide increased by 36 percent and the

1 proportion creating a suicide plan increased by 44 percent.⁵⁹

2 63. From 2007 to 2019, suicide rates among youth ages 10–24 in the United States
3 increased by 57 percent.⁶⁰ By 2018, suicide was the second leading cause of death for youth ages
4 10–24.⁶¹

5 64. From 2007 to 2016, emergency room visits for youth ages 5–17 rose 117 percent
6 for anxiety disorders, 44 percent for mood disorders, and 40 percent for attention disorders.⁶²

7 65. This and other data led the American Academy of Pediatrics, the American
8 Academy of Child and Adolescent Psychiatry, and the Children’s Hospital Association to join
9 the Surgeon General in declaring a national emergency in child and adolescent mental health in
10 December 2021.⁶³

11 66. President Biden highlighted the Defendants’ role in the youth mental health crisis
12 in his 2022 state of the union address⁶⁴ and again in 2023, demanding to “finally hold social
13 media companies accountable for [the] experimenting they’re doing – running [on] children for
14 profit.”⁶⁵

15 **D. Defendants Intentionally Target Youth Users with the Marketing, Design, and**
16 **Operation of Their Social Media Platforms**

17 67. This mental health crisis is no accident. It is the result of the Defendants’
18 deliberate choices and affirmative actions to design and market their social media platforms to

1 attract youth.

2 68. Defendants each run and operate social media platforms. The interactive features
3 Defendants provide on their platforms are similar in many respects. For example, Facebook,
4 Instagram, Snap, TikTok, and YouTube all offer tailored “feeds” of content curated by complex
5 algorithms intended to learn users’ interests; ways to publicly express affirmation for such
6 curated content through “likes,” comments, and sharing or reposting the content; and, in fact,
7 each is known to copy the designs and features of one another.⁶⁶ The salient features of
8 Defendants’ social media platforms are described in more detail below.

9 69. Defendants make money from their social media platforms by using them as
10 advertising platforms. Defendants collect data on their users’ viewing habits and behaviors—
11 highly valuable information from an advertiser’s perspective—and use that data to offer
12 advertisers the opportunity to target advertising to the platforms’ users. Advertisers pay a
13 premium to target advertisements to specific categories of users, including youth.

14 70. Defendants view their population of adolescent and even pre-adolescent users as
15 one of their most valuable commodities. Young users are central to Defendants’ business model
16 and advertising revenue as an audience for advertisements because children are more likely than
17 adults to use social media. Today, 95 percent of children ages 13–17 have cellphones,⁶⁷ 90
18 percent use social media,⁶⁸ and 28 percent buy products and services through social media.⁶⁹

19 71. To profit from these young users, Defendants intentionally market their platforms
20 to children and adolescents. For children under age thirteen, the Children’s Online Privacy

tinyurl.com/89ct4p88.

1 Protection Act (“**COPPA**”)⁷⁰ regulates the conditions under which platforms like Defendants’
2 can collect and use their information.

3 72. COPPA requires platforms that either target children under age thirteen or have
4 actual knowledge of users under age thirteen to obtain “verifiable parental consent” prior to
5 collecting and using information about children under age thirteen.⁷¹ Defendants have blatantly
6 violated COPPA or turned a blind eye to younger users on their platforms by leaving users to
7 self-report their age.

8 73. Seeking to capture even younger audiences, Defendants have each offered “kid
9 versions” of their platforms, which, while not collecting users’ information, are reportedly
10 “designed to fuel [kids’] interest in the grown-up version.”⁷²

11 74. To maximize revenue, Defendants have intentionally designed and operated their
12 platforms to maximize users’ screen time. Defendants have built features intended to exploit
13 human psychology and designed algorithms driven by advanced artificial intelligence and
14 machine-learning systems, progressively modifying their platforms in ways that promote
15 excessive and problematic use—despite knowing these practices are harming young users.

16 75. One way Defendants maximize the time users spend on their platforms involves
17 the design of feeds—whether of photos, videos, or sponsored or promoted content. Each
18 Defendant uses algorithms to serve users personalized content for them to consume ad nauseum.
19 Google’s former design ethicist, Tristan Harris, explained that this never-ending stream is
20 designed to “keep [users] scrolling, and purposely eliminate any reason for [them] to pause,
21 reconsider or leave.”⁷³ Defendants’ feeds take “an experience that was bounded and finite, and
22 turn it into a bottomless flow that keeps going.”⁷⁴ This “flow state,” as psychologists describe it,

23
24 ⁷⁰ See 15 U.S.C. §§ 6501-6506.

28 ⁷⁴ *Id.*

1 “fully immerse[s]” users, distorts their perception of time, and “has been shown to be associated
2 with problematic use of social networking sites.”⁷⁵

3 76. A second way social media platforms manipulate users is through social
4 reciprocity. “Reciprocity,” from a psychology perspective, refers to the powerful social
5 phenomenon of how people respond to positive or, conversely, hostile actions. Reciprocity
6 means that in response to friendly actions, people respond in a friendly manner and vice versa.⁷⁶
7 Sociologist Phillip Kunz best illustrated the automatic nature of reciprocity through his
8 Christmas card experiment in the 1970s. In the experiment, Mr. Kunz sent a group of complete
9 strangers holiday cards with pictures of his family and included a brief note.⁷⁷ Those people,
10 whom he had never met or communicated with before, reciprocated, flooding him with holiday
11 cards.⁷⁸ The majority of the responses did not even ask Mr. Kunz who he was.⁷⁹ They simply
12 responded to his initial gesture with a reciprocal action.

13 77. Reciprocity is why Facebook and Snapchat automatically tell a “sender when you
14 ‘saw’ their message, instead of letting you avoid disclosing whether you read it. As a
15 consequence, you feel more obligated to respond[,]” immediately.⁸⁰ Through these alerts and
16 other push notifications, users feel psychologically compelled to return to the platform.

17 78. A third way Defendants manipulate users to keep using or coming back to their
18 platforms is through the use of intermittent variable rewards (“**IVR**”). Also referred to as random
19 rewards or random reinforcement, IVR is another principle of behavioral psychology that has

⁸⁰ Von Tristan Harris, *The Slot Machine in Your Pocket*, *Spiegel Int’l* (July 27, 2016),
<https://www.spiegel.de/international/zeitgeist/smartphone-addiction-is-part-of-the-design-a-1104237.html>.

1 been recognized and studied for decades. The rewards are variable because the behavior is not
2 rewarded every time. Slot machines are the classic example of how IVR works.⁸¹ With each pull
3 of the lever on the slot machine, the user may or may not win a prize. Slot machine winnings are
4 intermittent and vary in value. As casinos owners know, IVR creates behaviors that are very hard
5 to stop, even when the rewards are no longer given out.

6 79. The neurobiology behind the effectiveness of IVR is well understood. IVR works
7 by spacing out dopamine-triggering stimuli with dopamine gaps—allowing for anticipation and
8 craving to develop, which strengthens the desire to engage in the activity with each release of
9 dopamine.

10 80. Defendants integrate IVR into the design and operations of their respective
11 platforms by “link[ing] a user’s action (like pulling a lever) with a variable reward.”⁸² For
12 example, when “we swipe down our finger to scroll the Instagram feed, we’re playing a slot
13 machine to see what photo comes next.”⁸³ Meta also delays the time it takes to load the feed.
14 “This is because without that three-second delay, Instagram wouldn’t feel variable.”⁸⁴ Without
15 that delay, there would be no time for users’ anticipation to build. In slot machine terms, there
16 would be “no sense of *will I win?* because you’d know instantly. So the delay isn’t the app
17 loading. It’s the cogs spinning on the slot machine.”⁸⁵ Each of the Defendants’ platforms exploits
18 this biochemical reaction among its users, typically using “likes,” “hearts,” or other indications
19 of social approval that serve as the reward. *See infra* Section IV.D.1–4.

20 81. “Everyone innately responds to social approval, but some demographics, in
21

⁸⁵ *Id.*

particular teenagers, are more vulnerable to it than others.”⁸⁶

82. Youth are especially vulnerable to the ways in which Defendants manipulate users to maximize their “watch time,” and to the resulting harms. Children’s brains undergo a fundamental shift around age ten that makes “preteens extra sensitive to attention and admiration from others.”⁸⁷ Consequently, for young users of social media, Defendants’ use of IVR, reciprocity, and other “rewards” taps into this heightened sensitivity at a critical time in their development.

83. Adolescence is a period of rapid growth and development in the human brain, second only to infancy in that regard. As a result of many of these changes during adolescence, preteens and teens are highly sensitive to both positive and negative social stimuli. the structures of the brain “closely tied” to social media activity and that drive instinctual behavior begin to change.⁸⁸ The ventral striatum is one of those structures. It receives a rush of dopamine and oxytocin, known as the “happy hormones[,]” whenever we experience social rewards.⁸⁹ Between the ages of 10 and 12, the receptors for those happy hormones begin to multiply in this region of the brain, which makes compliments on a new hairstyle, laughter from a classmate, or other social rewards “start to feel a lot more satisfying.”⁹⁰

84. These biological changes incentivize kids and teens to develop healthy social skills and connections. “But arriving at school in a new pair of designer jeans, hoping your crush will smile at you in the hallway, is worlds away from posting a video on TikTok that may get thousands of views and likes,” according to Mitch Prinstein, Chief Science Officer for the American Psychology Association.⁹¹

85. Part of what makes interactions on social media so different is that they are often

⁸⁶ Von Tristan Harris, *The Slot Machine in Your Pocket*, Spiegel Int’l (July 27, 2016), <https://www.spiegel.de/international/zeitgeist/smartphone-addiction-is-part-of-the-design-a-1104237.html>.

⁸⁸ *Id.*

⁸⁹ *Id.*

⁹⁰ *Id.*

⁹¹ *Id.*

1 permanent and public in nature. There is no public ledger tracking the number of consecutive
2 days you have spoken to someone, like there is for Snap “streaks.” Similarly, “[a]fter you walk
3 away from a regular conversation, you don’t know if the other person liked it, or if anyone else
4 liked it[.]”⁹² Conversely, on Defendants’ platforms, kids, their friends, and even complete
5 strangers can publicly deliver or withhold social rewards in the form of likes, comments, views,
6 and follows.⁹³

7 86. These social rewards release dopamine and oxytocin in the brains of youth and
8 adults alike but there are two key differences, as Chief Science Officer Prinstein explained:
9 “First, adults tend to have a fixed sense of self that relies less on feedback from peers. Second,
10 adults have a more mature prefrontal cortex, an area that can help regulate emotional responses
11 to social rewards.”⁹⁴

12 87. Adolescents, by contrast, are in a “period of personal and social identity
13 formation,” much of which “is now reliant on social media.”⁹⁵ “Due to their limited capacity for
14 self-regulation and their vulnerability to peer pressure,” adolescents “are at greater risk of
15 developing mental disorder.”⁹⁶

16 88. Together, Meta, Snap, TikTok, and Google have designed, refined, marketed, and
17 operated their social media platforms to maximize the number of youth who use their platforms
18 and the time they spend on those platforms. Despite knowing that social media inflicts harms on
19 youth, Defendants have continued to create more sophisticated versions of their platforms with
20 features designed to keep users engaged and maximize the amount of time they spend using
21 social media. Defendants’ conduct in designing and marketing exploitive and manipulative

⁹⁶ *Id.*

platforms, youth spend excessive amounts of time on Defendants' platforms.

89. Defendants' efforts worked. The majority of teenagers use the same five social media platforms: YouTube, TikTok, Instagram, Snapchat, and Facebook.⁹⁷ Each of these platforms individually boasts high numbers of teenage users.

1. Meta Intentionally Marketed to and Designed Their Social Media Platforms for Youth Users, Substantially Contributing to the Mental Health Crisis

a. Meta Platforms

90. Meta platforms, including Facebook and Instagram, are among the most popular social networking platforms in the world, with more than 3.6 billion users worldwide.⁹⁸

(i) The Facebook Platform

91. Facebook is a social networking platform that is one of Meta's platforms.

92. Facebook was founded in 2004 and has become the largest social network in the world. As of October 2021, Facebook had approximately 2.9 billion monthly active users, approximately 2 billion of whom use Facebook every day.⁹⁹

93. When Facebook was founded in 2004, only students at certain colleges and universities could use the social media platform, and verification of college enrollment was required to access Facebook.

94. In 2005, Facebook expanded and became accessible to students at more universities around the world, after which Meta launched a high school version of Facebook that also required an invitation to join.

95. Meta later expanded eligibility for Facebook to employees of several companies, including Apple and Microsoft, and added more universities to its network.

96. In September 2006, Facebook became available to all internet users. At the time,

⁹⁷ Emily Vogels *et al.*, *Teens, Social Media and Technology 2022*, Pew Rsch. Ctr. (Aug. 10, 2022), <https://www.pewresearch.org/internet/2022/08/10/teens-social-media-and-technology-2022/>.

⁹⁸ Felix Richter, *Meta Reaches 3.6 Billion People Each Month*, Statista (Oct. 29, 2021), <https://www.statista.com/chart/2183/facebook-mobile-users/>.

⁹⁹ See *id.*; S. Dixon, *Number of Daily Active Facebook Users Worldwide as of 3rd Quarter 2022 (in Millions)*, Statista (Oct. 27, 2022), <https://www.statista.com/statistics/346167/facebook-global-dau/>.

Meta claimed that it was open only to persons aged 13 and older with a valid email address; however, on information and belief, Meta did not require verification of a user's age or identity and did not actually verify users' email addresses, such that underage users could easily register an account with and access Facebook.

97. Facebook then underwent a series of changes aimed at increasing user engagement and platform growth, without regard to user safety, including the following:

- In 2009, Facebook launched the "like" button;
- In 2011, Facebook launched Messenger, its direct messaging service, and started allowing people to subscribe to accounts outside of their "friends";
- In 2012, Facebook started showing advertisements in its news feed and launched a real-time bidding system through which advertisers could bid on users based on their visits to third-party websites;
- In 2014, Facebook's facial recognition algorithm (DeepFace) reached near-human accuracy in identifying faces;
- In 2015, Facebook made significant changes to its news feed algorithm to determine what content to show users and launched its live-streaming service;
- In 2016, Facebook launched games for its social media platform, so that users could play games without having to install new apps; and
- In 2017, Facebook launched Facebook Creator, an app for mobile video posts that assists with content creation.

(ii) The Instagram Platform

98. Instagram is a social media platform that launched in 2010, which Meta acquired for \$1 billion in April 2012.

99. Instagram enables users to share photos and videos with other users and to view other users' photos and videos. These photos and videos appear on users' Instagram "feeds," which are virtually bottomless, scrollable lists of content.

100. After being acquired by Meta, Instagram experienced exponential user growth, expanding from approximately 10 million monthly active users in September 2012 to more than

one billion monthly active users worldwide today, including approximately 160 million users in the United States.¹⁰⁰

101. Instagram’s user growth was driven by design and development changes to the Instagram platform that increased engagement at the expense of the health and well-being of Instagram’s users—especially the children using the platform.

102. For example, in August 2020, Instagram began hosting and recommending short videos to users, called Reels.¹⁰¹ Like TikTok, Instagram allows users to view an endless feed of Reels that are recommended and curated to users by Instagram’s algorithm.

103. Instagram has become the most popular photo sharing social media platform among children in the United States—approximately 72 percent of children aged 13–17 in the United States use Instagram.¹⁰²

b. Meta Markets Its Platforms to Youth

104. To maximize the revenue generated from relationships with advertisers, Meta has expended significant effort to attract youth, to its platforms, including designing features that appeal to a teen and preteen audience. Meta explicitly targets teenagers for multiple reasons. In part, Meta views teenagers as a way to attract other potential users, such as by using teenagers to recruit parents who want to participate in their children’s lives as well as younger siblings who look to older siblings as models for which social media platforms to use and how to use them.¹⁰³

105. Most importantly, Meta recognizes that teenagers are the “pipeline” for the continued growth of the company. As an internal Instagram strategy memo warned in 2020, “If we lose the teen foothold in the U.S. we lose the pipeline.”¹⁰⁴ A 2018 marketing presentation

¹⁰⁰ S. Dixon, *Number of Instagram Users Worldwide from 2020 to 2025 (in Billions)*, Statista (May 23, 2022), <https://www.statista.com/statistics/183585/instagram-number-of-global-users/>.

¹⁰³ Sheera Frenkel *et al.*, *Instagram Struggles with Fears of Losing Its ‘Pipeline’: Young Users*, N.Y. Times (Oct. 26, 2021), <https://www.nytimes.com/2021/10/16/technology/instagram-teens.html>.

¹⁰⁴ *Id.*

declared the loss of teenage users to other social media platforms an “existential threat.”¹⁰⁵ In response, starting in 2018, Instagram devoted almost all of its annual marketing budget to attracting teenagers—hundreds of millions of dollars annually.¹⁰⁶

106. Meta also views preteens or “tweens” as a “valuable but untapped audience,” even contemplating “exploring playdates as a growth lever.”¹⁰⁷ Meta formed a team to study preteens, endeavored to create more products designed for them, and commissioned strategy papers regarding the “business opportunities” created.¹⁰⁸

¹⁰⁵ *Id.*

¹⁰⁶ *Id.*

¹⁰⁷ Georgia Wells & Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show; It has investigated how to engage young users in response to competition from Snapchat, TikTok; ‘Exploring playdates as a growth lever*, Wall St. J. (Sept. 28, 2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>.

¹⁰⁸ *Id.*

107. For these reasons, the Meta platforms are designed to be used by children and are actively marketed to children throughout the United States. Meta advertises to children through its own efforts as well as through advertisers that create and target advertisements to children. Internal Meta documents establish that Meta spends hundreds of millions of dollars researching, analyzing, and marketing to children and teens to find ways to make its platforms more appealing to these age groups and to maximize the time they spend on its platforms, as these age groups are seen as essential to Meta's long-term profitability and market dominance.¹⁰⁹ For

¹⁰⁹ *Id.*

1 instance, after Instagram’s founders left Meta in September 2018, “Facebook went all out to turn
2 Instagram into a main attraction for young audiences,” and “began concentrating on the ‘teen
3 time spent’ data point,” in order to “drive up the amount of time that teenagers were on the app
4 with features including Instagram Live, a broadcasting tool, and Instagram TV, where people
5 upload videos that run as long as an hour.”¹¹⁰

6 108. In fact, Meta’s acquisition of Instagram in 2012 was primarily motivated by its
7 desire to make up for declines in the use of Facebook by youth, and Meta views Instagram as
8 central to its ability to attract and retain young audiences. A Meta presentation from 2019
9 indicated that “Instagram is well positioned to resonate and win with young people,” and “[t]here
10 is a path to growth if Instagram can continue their trajectory.”¹¹¹

11 109. Although Meta’s policy is that children younger than thirteen cannot register an
12 account, it lacks effective age-verification protocols—an issue long known to Meta. Since at
13 least 2011, Meta has known that its age-verification protocols are largely inadequate, estimating
14 at that time that it removed 20,000 children under age thirteen from Facebook every day.¹¹² A
15 decade later, in 2021, an Instagram executive acknowledged that users under thirteen can still
16 “lie about [their] age now” to register an account.¹¹³

17 110. Meta has yet to implement protocols to verify a user’s age. Meta also has
18 agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install
19

28, 2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>.

its platforms on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Meta is prohibited from providing the Meta platforms to users under the age of thirteen, Meta actively promotes and provides underage users access to its platforms by encouraging and allowing cell phone manufacturers to pre-install the platforms on mobile devices indiscriminately. Consequently, approximately 11 percent of United States children between the ages of 9 and 11 used Instagram in 2020,¹¹⁴ despite Meta claiming to remove approximately 600,000 underage users per quarter.¹¹⁵

111. Ultimately, as discussed above, Meta’s efforts to attract young users have been successful.

c. Meta Intentionally Maximizes the Time Users Spend on its Platforms

112. Once users begin using its platforms, Meta employs a variety of strategies to keep them there, using features that exploit the natural human desire for social interaction and the neurophysiology of the brain’s reward systems to keep users endlessly scrolling, posting, “liking,” commenting, and counting the number of “likes” and comments to their own posts. As discussed above, the rapidly developing adolescent brain, highly attuned to social rewards, is particularly vulnerable to such exploitation.

113. Many of the features Meta has designed utilize the well-established principle of intermittent variable rewards or IVR, discussed above, including one of its most defining features: the “Like” button. Meta knows “Likes” are a source of social comparison harm for many users, as detailed below. Several Meta employees involved in creating the Like button have since left Meta and have spoken publicly about the manipulative nature of Meta’s platforms and the harm they cause users.¹¹⁶

¹¹⁴Brooke Auxier *et al.*, *Parenting Children in the Age of Screens*, Pew Rsch. Ctr. (July 28, 2020), <https://www.pewresearch.org/internet/2020/07/28/childrens-engagement-with-digital-devices-screen-time/>.

¹¹⁵ Georgia Wells & Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show; It has investigated how to engage young users in response to competition from Snapchat, TikTok; ‘Exploring playdates as a growth lever*, Wall St. J. (Sept. 28, 2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>.

¹¹⁶ See, e.g., Paul Lewis, *‘Our minds can be hijacked’: the tech insiders who fear a smartphone dystopia*, Guardian (Oct. 6, 2017),

1 114. Another way in which Meta employs IVR is through its push notifications and
2 emails. These notifications alert users to activity related to their account, such as when someone
3 else has “Liked” a post or when the user has been tagged in someone else’s post. Meta spaces out
4 notifications of likes and comments into multiple bursts rather than notifying users in real time,
5 which activates the brain’s reward circuitry and then creates dopamine gaps that leave users
6 craving in anticipation for more. In this regard, Meta’s push notifications and emails are
7 specifically designed to manipulate users to reengage with Meta’s platforms to increase user
8 engagement regardless of a user’s health or wellbeing.

9 115. Other features of Meta’s platforms based on IVR principles include posts,
10 comments, tagging, and the “pull to refresh” feature (which, as noted above, has the same effect
11 on the brain as pulling the lever on a slot machine).

12 116. Still other design decisions utilize the principle of reciprocity, such as the use of
13 visual cues to reflect that someone is currently writing a message (a feature designed to keep a
14 user on the platform until they receive the message), and alerting users when a recipient has read
15 their message (which encourages the recipient to respond and return to the platform to check for
16 a response).

17 117. The Meta platforms are designed to encourage users to post content and to like,
18 comment, and interact with other users’ posts. Each new post that appears on a user’s feed can
19 function as a dopamine-producing social interaction in the user’s brain. Similarly, likes,
20 comments, and other interactions with the user’s own posts function as an even stronger
21 dopamine-producing stimulus than does seeing new posts from other users. This in turn drives
22 users to post more content they expect will generate even more likes and comments. In this
23 regard, Meta has designed its platforms to effectively trap users—especially youth—in endless
24 cycles of what Facebook whistleblower Frances Haugen called “little dopamine loops.”¹¹⁷

25
26 [https://www.theguardian.com/technology/2017/oct/05/smartphone-addiction-silicon-valley-](https://www.theguardian.com/technology/2017/oct/05/smartphone-addiction-silicon-valley-dystopia)

<https://www.today.com/parents/teens/facebook-whistleblower-frances-haugen-rcna15256>.

1 **d. Meta’s Algorithms Are Manipulative and Harmful**

2 118. Meta also employs advanced computer algorithms and artificial intelligence to
3 make its platforms as engaging and habit-forming as possible for users. For example, the Meta
4 platforms display curated content and employ recommendations that are customized to each user
5 by using sophisticated algorithms. The proprietary services developed through such algorithms
6 include News Feed (a newsfeed of stories and posts published on the platform, some of which
7 are posted by connections and others that are suggested by Meta’s algorithms), People You May
8 Know (algorithm-based suggestions of persons with common connections or background),
9 Suggested for You, Groups You Should Join, and Discover (algorithm-based recommendations
10 of groups). Such algorithm-based content and recommendations are pushed to each user in a
11 steady stream as the user navigates the platform, as well as through notifications sent to the
12 user’s smartphone and email addresses when the user is disengaged with the platform.

13 119. Meta’s algorithms are not based exclusively on user requests or even user inputs.
14 Meta’s algorithms combine information entered or posted by the user on the platform with the
15 user’s demographics and other data points collected and synthesized by Meta, make assumptions
16 about that user’s interests and preferences, make predictions about what else might appeal to the
17 user, and then make very specific recommendations of posts and pages to view and groups to
18 visit and join based on rankings that will optimize Meta’s key performance indicators. In this
19 regard, Meta’s design dictates the way content is presented, such as its ranking and
20 prioritization.¹¹⁸

21 120. Meta’s current use of algorithms in its platforms is driven and designed to
22 maximize user engagement. Over time, Meta has gradually transitioned away from chronological
23 ranking, which organized the interface according to when content was posted or sent, to
24 prioritize what Meta calls “Meaningful Social Interactions” (“**MSI**”), which emphasizes users’
25 connections and interactions such as likes and comments and gives greater significance to the
26 interactions of connections that appeared to be the closest to users. In order to do this, Meta

27 ¹¹⁸ See, e.g., Adam Mosseri, *Shedding More Light on How Instagram Works*, Instagram (June 8,
28 2021), [https://about.instagram.com/blog/announcements/shedding-more-light-on-how-
instagram-works](https://about.instagram.com/blog/announcements/shedding-more-light-on-how-instagram-works).

1 developed and employed an “amplification algorithm” to execute engagement-based ranking,
2 which considers a post’s likes, shares, and comments, as well as a respective user’s past
3 interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise
4 meets certain benchmarks.

5 121. Although Meta claims that the goal of this engagement-based ranking is “helping
6 you have more meaningful social interactions,”¹¹⁹ Meta’s algorithms covertly operate on the
7 principle that intense reactions invariably compel attention. Because these algorithms measure
8 reactions and contemporaneously immerse users in the most reactive content, these algorithms
9 effectively work to steer users toward the most negative content, because negative content
10 routinely elicits passionate reactions. In other words, the algorithm is designed to prioritize the
11 number of interactions rather than the quality of interactions.

12 122. As set forth in greater detail below, Meta was well aware of the harmful content
13 that it was promoting but failed to change its algorithms because the inflammatory content that
14 its algorithms were feeding to users fueled their return to the platforms and led to more
15 engagement—which in turn helped Meta sell more advertisements that generate most of its
16 revenue.

17 123. Meta’s shift from chronological ranking to algorithm-driven content and
18 recommendations has changed the Meta platforms in ways that are profoundly dangerous and
19 harmful to children. Meta’s algorithms exploit vulnerabilities that are heightened in preteens and
20 teens due to their social and psychological development—and Meta designs its platforms
21 with these specific vulnerabilities in mind.

22 **e. Meta’s Harmful “Feeds”**

23 124. Both Facebook and Instagram show each user an algorithm-generated “feed” that
24 consists of a series of photos and videos posted by accounts that the user follows, along with
25 advertising and content specifically selected and promoted by Meta.

26 125. These feeds are virtually bottomless lists of content that enable users to scroll
27

28 ¹¹⁹ Mark Zuckerberg, Facebook (Jan. 11, 2018, 4:28 PM),
<https://www.facebook.com/zuck/posts/10104413015393571?pnref=story>.

1 endlessly without any natural end points that would otherwise encourage them to move on to
2 other activities. In this regard, “[u]nlike a magazine, television show, or video game,” the Meta
3 platforms only rarely prompt their users to take a break by using “stopping cues.”¹²⁰ Meta’s
4 “bottomless scrolling” feature is designed to encourages users to use its platforms for unlimited
5 periods of time.

6 126. Meta also exerts control over a user’s feed through certain ranking mechanisms,
7 escalation loops, and promotion of advertising and content specifically selected and promoted by
8 Meta based on, among other things, its ongoing planning, assessment, and prioritization of the
9 types of information most likely to increase user engagement.

10 127. As Senator Richard Blumenthal, Chair of the Subcommittee on Consumer
11 Protection, Product Safety, and Data Security, explained during one of a series of Senate
12 hearings in 2021 on “Protecting Kids Online,” Meta utilizes private information of its child users
13 to “precisely target [them] with content and recommendations, assessing what will provoke a
14 reaction,” including encouragement of “destructive and dangerous behaviors,” which is how
15 Meta “can push teens into darker and darker places.”¹²¹ Whistleblower Frances Haugen testified
16 that Meta’s “amplification algorithms, things like engagement based ranking . . . can lead
17 children . . . all the way from just something innocent like healthy recipes to anorexia promoting
18 content over a very short period of time.”¹²² Meta thus specifically selects and pushes this
19 harmful content on its platforms, for which it is then paid, and does so both for direct profit and
20 also to increase user engagement, resulting in additional profits down the road.

21 128. As part of the Senate Subcommittee’s investigation into social media companies,
22 Senators Richard Blumenthal, Marsha Blackburn and Mike Lee tested and confirmed the fact
23 that Meta’s platforms’ recommendation-based feeds and features promote harmful content by
24

opening test accounts purporting to be teenage girls. Senator Blumenthal stated that, “[w]ithin an hour all our recommendations promoted pro-anorexia and eating disorder content.”¹²³ Likewise, Senator Lee found that an account for a fake 13-year-old girl was quickly “flooded with content about diets, plastic surgery and other damaging material for an adolescent girl.”¹²⁴

129. Meta’s Instagram platform features a feed of “Stories,” which are short-lived photo or video posts that are accessible only for 24 hours. This feature encourages constant, repeated, and compulsive use of Instagram, so that users do not miss out on content before it disappears. As with other feeds, the presentation of content in a user’s Stories feed is generated by an algorithm designed by Meta to maximize the amount of time a user spends on the app.

130. Instagram also features a feed called “Explore,” which displays content posted by users not previously “followed.” The content in “Explore” is selected and presented by an algorithm designed by Meta to maximize the amount of time a user spends on the app. As with other feeds, the Explore feature may be scrolled endlessly, and its algorithm will continually generate new recommendations, encouraging users to use the app for unlimited periods of time.

131. Instagram also features a feed called “Reels,” which presents short video posts by users not previously followed. These videos play automatically, without input from the user, encouraging the user to stay on the app for indefinite periods of time. As with other feeds, Reels content is selected and presented by an algorithm designed by Meta to maximize the amount of time a user spends on the app.

f. For Years, Meta Has Been Aware That Its Platforms Harm Children

132. In an internal slide presentation in 2019, Meta’s own researchers, studying Instagram’s effects on children, concluded, “**We make body image issues worse for one in three teen girls[.]**”¹²⁵ This presentation was one of many documents leaked by former Meta

¹²³ Vanessa Romo, *4 Takeaways from Senators' Grilling of Instagram's CEO About Kids and Safety*, NPR (Dec. 8, 2021, 10:13 PM), <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>.

¹²⁴ *Id.*

¹²⁵ Georgia Wells *et al.*, *Facebook Knows Instagram Is Toxic for Teen Girls, Company Documents Show; Its own in-depth research shows a significant teen mental-health issue that*

1 employee Frances Haugen to journalists at the *Wall Street Journal* and federal regulators in
2 2021.¹²⁶ The *Wall Street Journal*'s reporting on the documents began in September 2021 and
3 caused a national and international uproar.

4 133. The leaked documents confirmed what social scientists have long suspected, that
5 social media platforms like Meta's—and Instagram in particular—can cause serious harm to the
6 mental and physical health of children. Moreover, this capacity for harm is by design—what
7 makes the Meta platforms profitable is precisely what harms its young users.

8 134. Upon information and belief, at least as far back as 2019, Meta initiated a
9 Proactive Incident Response experiment, which began researching the effect of Meta on the
10 mental health of today's children.¹²⁷ Meta's own in-depth analyses show significant mental-
11 health issues stemming from the use of Instagram among teenage girls, many of whom linked
12 suicidal thoughts and eating disorders to their experiences on the app.¹²⁸ In this regard, Meta's
13 researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that
14 use the platform.¹²⁹

15 135. In particular, the researchers found that “[s]ocial comparison,” or individuals’
16 assessment of their own value relative to that of others, is “worse on Instagram” for teens than on
17 other social media platforms.¹³⁰ One in five teens reported that Instagram “makes them feel

34 ¹²⁹ *Id.*

35 ¹³⁰ *Id.*

worse about themselves.”¹³¹ Roughly two in five teen users reported feeling “unattractive,” while one in 10 teen users reporting suicidal thoughts traced them to Instagram.¹³² Teens “consistently” and without prompting blamed Instagram “for increases in the rate of anxiety and depression.”¹³³ And although teenagers identify Instagram as a source of psychological harm, they often lack the self-control to use Instagram less. Also, according to Meta’s own researchers, young users are not capable of controlling their Instagram use to protect their own health.¹³⁴ Such users “often feel ‘addicted’ and know that what they’re seeing is bad for their mental health but feel unable to stop themselves.”¹³⁵

136. Similarly, in a March 2020 presentation posted to Meta’s internal message board, researchers found that “[t]hirty-two percent of teen girls said that when they felt bad about their bodies, Instagram made them feel worse.”¹³⁶ Sixty-six percent of teen girls and 40 percent of teen boys have experienced negative social comparison harms on Instagram.¹³⁷ Further, approximately 13 percent of teen-girl Instagram users say the platform makes thoughts of “suicide and self-harm” worse, and 17 percent of teen-girl Instagram users say the platform makes “[e]ating issues” worse.¹³⁸ Meta’s researchers also acknowledged that “[m]ental health

outcomes” related to the use of Instagram “can be severe,” including “Body Dissatisfaction,” “Body Dysmorphia,” “Eating Disorders,” “Loneliness,” and “Depression.”¹³⁹

137. Not only is Meta aware of the harmful nature of the Meta platforms, the leaked documents reveal that Meta is aware of the specific design features that lead to excessive use and harm to children. For instance, Meta knows that Instagram’s Explore, Feed, and Stories features contribute to social comparison harms “in different ways.”¹⁴⁰ Moreover, specific “[a]spects of Instagram exacerbate each other to create a perfect storm” of harm to users, and that the “social comparison sweet spot”—a place of considerable harm to users, particularly teenagers and teen girls—lies at the center of Meta’s model and platforms’ features.¹⁴¹ In this regard, Meta’s researchers wrote that “[s]ocial comparison and perfectionism are nothing new, but young people are dealing with this on an unprecedented scale,” and “[c]onstant comparison on Instagram is ‘the reason’ why there are higher levels of anxiety and depression in young people.”¹⁴²

2. Snapchat Intentionally Marketed to and Designed Its Social Media Platform for Youth Users, Substantially Contributing to the Mental Health Crisis

a. The Snapchat Platform

138. Snapchat was created in 2011 by Stanford University students Evan Spiegel and Bobby Murphy, who serve as Snap Inc.’s CEO and CTO, respectively.¹⁴³

139. Snapchat started as a photo-sharing platform that allows users to form groups and share photos, known as “snaps,” that disappear after being viewed by the recipients. Snapchat became well known for this self-destructing content feature. But Snapchat quickly evolved

¹⁴² See *Hard Life Moments-Mental Health Deep Dive* at 53, Facebook (Nov. 2019), <https://about.fb.com/wp-content/uploads/2021/09/Instagram-Teen-Annotated-Research-Deck-1.pdf>.

¹⁴³ Katie Benner, *How Snapchat is Shaping Social Media*, N.Y. Times (Nov. 30, 2016), <https://www.nytimes.com/2016/11/30/technology/how-snapchat-works.html>.

beyond a simple photo-sharing app, as Snap made design changes and rapidly developed new features aimed at and ultimately increasing Snapchat’s popularity among teenage users.

140. In 2012, Snap added video sharing capabilities, pushing the number of “snaps” to 50 million per day.¹⁴⁴ A year later, Snap added the “Stories” function, which allows users to upload a rolling compilation of snaps that the user’s friends can view for 24 hours.¹⁴⁵ The following year, Snap added a feature that enabled users to communicate with one another in real time via text or video.¹⁴⁶ It also added the “Our Story” feature, expanding on the original stories function by allowing users in the same location to add their photos and videos to a single publicly viewable content stream.¹⁴⁷ At the same time, Snap gave users the capability to add filters and graphic stickers onto photos indicating a user’s location, through a feature it refers to as “Geofilters.”¹⁴⁸

141. In 2015, Snap added a “Discover” feature that promotes videos from news outlets and other content creators.¹⁴⁹ Users can watch that content by scrolling through the Discover feed. After the selected video ends, Snapchat automatically plays other video content in a continuous stream, which does not cease until a user manually exits the stream.

142. In 2020, Snap added the “Spotlight” feature, through which it serves users “an endless feed of user-generated content” that Snap curates from the 300 million daily Snapchat users.¹⁵⁰

1 143. Today, Snapchat is one of the largest social media platforms in the world. By its
2 own estimates, Snapchat has 363 million daily users, including 100 million daily users in North
3 America.¹⁵¹ Snapchat reaches 90 percent of people ages 13–24 in over twenty countries and
4 reaches nearly half of all smartphone users in the United States.¹⁵²

5 **b. Snap Markets Its Platform to Youth**

6 144. Snapchat’s commercial success is due to its advertising. In 2014, Snap began
7 running advertisements on Snapchat.¹⁵³ Since then, Snapchat’s business model has revolved
8 around its advertising revenue, which has boomed. Snap now expects to generate \$4.86 billion in
9 Snapchat advertising revenue for 2022.¹⁵⁴

10 145. Snap specifically markets Snapchat to children ages 13–17 because they are a key
11 demographic for Snap’s advertising business. Internal documents describe users between the
12 ages of 13–34 as “critical” to Snap’s advertising success because of the common milestones
13 achieved within that age range.¹⁵⁵

28 ¹⁵⁵ *October 2022 Investor Presentation* at 27, Snap Inc. (Oct. 20, 2022),
<https://investor.snap.com/events-and-presentations/presentations/default.aspx>.

146. While Snap lumps teenagers in with younger adults in its investor materials, Snap marketing materials featuring young models reveal its priority market:

147. In addition to its marketing, Snap has targeted a younger audience by designing Snapchat in a manner that older individuals find hard to use.¹⁵⁶ The effect of this design is that Snapchat is a platform where its young users are insulated from older users including their parents. As Snap's CEO explained, "[w]e've made it very hard for parents to embarrass their children[.]"¹⁵⁷

148. Snap also designed Snapchat as a haven for young users to hide content from their parents by ensuring that photos, videos, and chat messages quickly disappear. This design further insulates children from adult oversight.

149. Moreover, Snap added as a feature the ability for users to create cartoon avatars

¹⁵⁶ See Hannah Kuchler & Tim Bradshaw, *Snapchat's Youth Appeal Puts Pressure on Facebook*, Fin. Times (Aug. 21, 2017), <https://www.ft.com/content/07e4dc9e-86c4-11e7-bf50-e1c239b45787>.

¹⁵⁷ Max Chafkin & Sarah Frier, *How Snapchat Built a Business by Confusing Olds*, Bloomberg (Mar. 3, 2016), <https://www.bloomberg.com/features/2016-how-snapchat-built-a-business/>.

modeled after themselves.¹⁵⁸ By using an artform generally associated with and directed at younger audiences, Snap further designed Snapchat to entice teenagers and younger children.

150. In 2013, Snap also marketed Snapchat specifically to kids under 13 through a feature it branded “SnapKidz.”¹⁵⁹ This feature—part of the Snapchat platform—allowed children under 13 to take photos, draw on them, and save them locally on the device.¹⁶⁰ Kids could also send these images to others or upload them to other social media sites.¹⁶¹

151. While SnapKidz feature was later discontinued and Snap purports to now prohibit users under the age of 13, its executives have admitted that its age verification “is effectively useless in stopping underage users from signing up to the Snapchat app.”¹⁶²

152. Snap’s efforts to attract young users have been successful. *See supra* Section IV.A. Teenagers consistently name Snapchat as a favorite social media platform. The latest figures show 13 percent of children ages 8–12 used Snapchat in 2021,¹⁶³ and almost 60 percent of children ages 13–17 use Snapchat.¹⁶⁴

c. Snap Intentionally Maximizes the Time Users Spend on its Platform

153. Snap promotes excessive use of its platform through design features and manipulative algorithms intended to maximize users’ screen time.

154. Snap has implemented inherently and intentionally exploitive features into

Snapchat, including “Snapstreaks,” various trophies and reward systems, quickly disappearing (“ephemeral”) messages, and filters. Snap designed these features, along with others, to maximize the amount of time users spend on Snapchat.

155. Snaps are intended to manipulate users by activating the rule of reciprocity.¹⁶⁵ Whenever a user gets a snap, they feel obligated to send a snap back. And Snapchat tells users each time they receive a snap by pushing a notification to the recipient’s cellphone. These notifications are designed to prompt users to open Snapchat and view content, increasing the amount of time users spend on Snapchat. Further, because snaps disappear within ten seconds of being viewed, users feel compelled to reply immediately. This disappearing nature of snaps is a defining characteristic of Snapchat and intended keep users on the platform.

156. Snap also keeps users coming back to the Snapchat platform through the “Snapstreaks” feature.¹⁶⁶ A “streak” is a counter within Snapchat that tracks how many consecutive days two users have sent each other snaps. If a user fails to snap the other user within 24 hours, the streak ends. Snap adds extra urgency by putting an hourglass emoji next to a friend’s name if a Snapchat streak is about to end.¹⁶⁷ This design implements a system where a user must “check constantly or risk missing out.”¹⁶⁸ And this feature is particularly effective on teenage users. “For teens in particular, streaks are a vital part of using the app, and of their social lives as a whole.”¹⁶⁹ Some children become so obsessed with maintaining a Snapstreak that they

1 give their friends access to their accounts when they may be away from their phone for a day or
2 more, such as on vacation.¹⁷⁰

3 157. Snap also designed features that operate on IVR principles to maximize the time
4 users are on its platform. The “rewards” come in the form of a user’s “Snapscore,” and other
5 signals of recognition similar to “likes” used in other platforms. For example, a Snapscore
6 increases with each snap a user sends and receives. The increase in score and other trophies and
7 charms users can earn by using the app operate on variable reward patterns. Like Snapstreaks,
8 these features are designed to incentivize sending snaps and increase the amount of time users
9 spend on Snapchat.

10 158. Snap also designs photo and video filters and lenses, which are central to
11 Snapchat’s function as a photo and video sharing social media platform. Snap designed its filters
12 and lenses in a way to further maximize the amount of time users spend on Snapchat. One way
13 Snap uses its filters to hook young users is by creating temporary filters that impose a sense of
14 urgency to use them before they disappear. Another way Snap designed its filters to increase
15 screen use is by gamification. Many filters include games,¹⁷¹ creating competition between users
16 by sending each other snaps with scores. Further, Snap tracks data on the most commonly used
17 filters and develops new filters based on this data.¹⁷² And Snap personalizes filters to further
18 entice individuals to use Snapchat more.¹⁷³ Snap designs and modifies these filters to maximize
19 the amount of time users spend on Snapchat.

¹⁷³ *Id.*

1 **d. Snapchat’s Algorithms Are Manipulative and Harmful**

2 159. Snap also uses complex algorithms to suggest friends to users and recommend
3 content in order to keep users using Snapchat.

4 160. Snap notifies users based on an equation Snap uses to determine whether someone
5 should add someone else as a friend on Snapchat. This is known as “Quick Add.” By using an
6 algorithm to suggest friends to users, Snapchat increases the odds users will add additional
7 friends, send additional snaps, and spend more time on the app.

8 161. Snapchat also contains “Discover” and “Spotlight” features that use algorithms to
9 recommend content to users. The Discover feature includes content from news and other media
10 outlets.¹⁷⁴ A user’s Discover page is populated by an algorithm and constantly changes
11 depending on how a user interacts with the content.¹⁷⁵ Similarly, the Spotlight feature promotes
12 popular videos from other Snapchat users and is based on an algorithm that determines whether a
13 user has positively or negatively engaged with similar content.¹⁷⁶ Snap programs its algorithms
14 to push content to users that will keep them engaged on Snapchat and, thereby, increase the
15 amount of time users spend on Snapchat, worsening their mental health.

16 **e. Snap’s Conduct in Designing and Operating Its Platform Has**
17 **Harmed Youth Mental Health**

18 162. The way in which Snap has designed and operated Snapchat has caused youth to
19 suffer increased anxiety, depression, disordered eating, and sleep deprivation.

20 163. Snap knows Snapchat is harming youth because, as alleged above, Snap
21 intentionally designed Snapchat to maximize engagement by preying on the psychology of
22 children through its use of algorithms and other features including Snapstreaks, various trophies
23 and reward systems, quickly disappearing messages, filters, and games.

25 ¹⁷⁴ Steven Tweedie, *How to Use Snapchat’s New ‘Discover’ Feature*, Bus. Insider (Jan. 27,
26 2015), <https://www.businessinsider.com/how-to-use-snapchat-discover-feature-2015-1>.

(last visited Dec. 8, 2022).

28 ¹⁷⁶ Sara Fischer, *Snapchat launches Spotlight, a TikTok competitor*, Axios (Nov. 23, 2020),
<https://www.axios.com/2020/11/23/snapchat-launches-spotlight-tiktok-competitor>;
<https://snap.com/en-US/privacy/your-information>.

1 164. Snap should know that its conduct has negatively affected youth. Snap’s conduct
2 has been the subject of inquiries by the United States Senate regarding Snapchat’s use “to
3 promote bullying, worsen eating disorders, and help teenagers buy dangerous drugs or engage in
4 reckless behavior.”¹⁷⁷ Further, Senators from across the ideological spectrum have introduced
5 bills that would ban many of the features Snapchat uses, including badges and other awards
6 recognizing a user’s level of engagement with the platform.¹⁷⁸ Despite these calls for oversight
7 from Congress, Snap has failed to curtail its use of streaks, badges, and other awards that
8 recognize users’ level of engagement with Snapchat.

9 165. Snap also knows or should know of Snapchat’s other negative effects on youth
10 because of published research findings. For instance, researchers coined the phrase “Snapchat
11 dysmorphia” after the pernicious effect Snapchat has had on how young people view
12 themselves.¹⁷⁹ The researchers and doctors use the phrase to describe people, usually young
13 women, seeking plastic surgery to make themselves look like the way they do through Snapchat
14 filters.¹⁸⁰ The cause of this trend appears to be Snapchat’s and other social media platforms’
15 beauty filters, which create a “sense of unattainable perfection” that is alienating and damaging
16 to a person’s self-esteem.¹⁸¹ One social psychologist summed the effect as “the pressure to
17 present a certain filtered image on social media can certainly play into [depression and anxiety]
18 for younger people who are just developing their identities.”¹⁸²

¹⁸² *Id.*

166. Despite knowing Snapchat harms its young users, Snap continues to update and add features intentionally designed to maximize the amount of time users spend on Snapchat. Snap continues its harmful conduct because its advertising revenue relies on Snapchat's users consuming large volumes of content on its platform.

3. TikTok Intentionally Marketed to and Designed Its Social Media Platform for Youth Users, Substantially Contributing to the Mental Health Crisis

a. TikTok's Platform

167. TikTok is a social media platform that describes itself as "the leading destination for short-form mobile video."¹⁸³ According to TikTok, it is primarily a platform where users "create and watch short-form videos."¹⁸⁴

168. TikTok's predecessor, Musical.ly, launched in 2014 as a place where people could create and share 15-second videos of themselves lip-syncing or dancing to their favorite music.¹⁸⁵

169. In 2017, ByteDance launched an international version of a similar platform that also enabled users to create and share short lip-syncing videos that it called TikTok.¹⁸⁶

170. That same year, ByteDance acquired Musical.ly to leverage its young user base in the United States, of almost 60 million monthly active users.¹⁸⁷

171. Months later, the apps were merged under the TikTok brand.¹⁸⁸

¹⁸³ About: Our Mission, TikTok, <https://www.tiktok.com/about> (last visited Dec. 8, 2022).

¹⁸⁴ Protecting Kids Online: Snapchat, TikTok, and YouTube: Hearing Before the Subcomm. On Consumer Protection, Product Safety, and Data Security, 117 Cong. (2021) (statement of Michael Beckerman, VP and Head of Public Policy, Americas, TikTok).

¹⁸⁵ Biz Carson, *How a failed education startup turned into Musical.ly, the most popular app you've probably never heard of*, Bus. Insider (May 28, 2016), <https://www.businessinsider.com/what-is-musically-2016-5>.

(Nov. 10, 2017), <https://www.wsj.com/articles/lip-syncing-app-musical-ly-is-acquired-for-as-much-as-1-billion-1510278123>.

¹⁸⁸ Paresh Dave, *China's ByteDance scrubs Musical.ly brand in favor of TikTok*, Reuters (Aug. 1, 2018), <https://www.reuters.com/article/us-bytedance-musically/chinas-bytedance-scrubs-musical-ly-brand-in-favor-of-tiktok-idUSKBN1KN0BW>.

1 172. Since then, TikTok has expanded the length of time for videos from 15-seconds to
2 up to 10 minutes;¹⁸⁹ created a fund that was expected to grow to over \$1 billion within three
3 years to incentivize users to create videos that even more people will watch;¹⁹⁰ and had users
4 debut their own songs, share comedy skits,¹⁹¹ and “challenge” others to perform an activity.¹⁹²

5 173. The videos users create on TikTok are only one part of the equation.

6 174. “[O]ne of the defining features of the TikTok platform,” is its “For You” feed.¹⁹³
7 There, users are served with an unending stream of videos TikTok curates for them based on
8 complex, machine-learning algorithms intended to keep users on its platform. TikTok itself
9 describes the feed as “central to the TikTok experience and where most of our users spend their
10 time.”¹⁹⁴ The *New York Times* described it this way:

11 It’s an algorithmic feed based on videos you’ve interacted with, or even just
12 watched. It never runs out of material. It is not, unless you train it to be, full of
13 people you know, or things you’ve explicitly told it you want to see. It’s full of
14 things that you seem to have demonstrated you want to watch, no matter what you
actually say you want to watch.¹⁹⁵

15 175. The “For You” feed has quickly garnered TikTok hundreds of millions of users.
16 Since 2018, TikTok has grown from 271 million global users to more than 1 billion global
17 monthly users as of September 2021.¹⁹⁶

1 **b. TikTok Markets Its Platform to Youth**

2 176. TikTok, like the other Defendants’ platforms, has built its business plan around
3 advertising revenue, which has boomed. In 2022, TikTok is projected to receive \$11 billion in
4 advertising revenue, over half of which (i.e., \$6 billion) is expected to come from the United
5 States.¹⁹⁷

6 177. TikTok, since its inception as Musical.ly, has been designed and developed with
7 youth in mind.

8 178. Alex Zhu and Louis Yang, the other co-founder of Musical.ly, raised \$250,000 to
9 build an app that experts could use to create short three- to five-minute videos explaining a
10 subject.¹⁹⁸ The day they released the app, Zhu said they knew “[i]t was doomed to be a failure,”
11 because “[i]t wasn’t entertaining, and it didn’t attract teens.”¹⁹⁹

12 179. According to Zhu, he stumbled upon the idea that would become known as
13 TikTok while observing teens on a train, half of whom were listening to music while the other
14 half took selfies or videos and shared the results with friends.²⁰⁰ “That’s when Zhu realized he
15 could combine music, videos, and a social network to attract the early-teen demographic.”²⁰¹

16 180. Zhu and Yang thereafter developed the short-form video app that is now known
17 as TikTok, which commentators have observed “encourages a youthful audience in subtle and
18 obvious ways.”²⁰²

19 181. Among the more subtle ways the app was marketed to youth, are its design and
20 content. For example, the Federal Trade Commission (“FTC”) alleged that the app initially
21 centered around a child-oriented activity (i.e., lip syncing); featured music by celebrities that

27 ²⁰⁰ *Id.*

28 ²⁰¹ *Id.*

29 ²⁰² John Herrman, *Who’s Too Young for an App? Musical.ly Tests the Limits*, N.Y. Times (Sept.
16, 2016), [https://www.nytimes.com/2016/09/17/business/media/a-social-network-frequented-
by-children-tests-the-limits-of-online-regulation.html](https://www.nytimes.com/2016/09/17/business/media/a-social-network-frequented-by-children-tests-the-limits-of-online-regulation.html).

1 then appealed primarily to teens and tweens, such as Selena Gomez and Ariana Grande; labelled
2 folders with names meant to appeal to youth, such as “Disney” and “school”; included songs in
3 such folders related to Disney television shows and movies, such as “Can You Feel the Love
4 Tonight” from the movie “The Lion King” and “You’ve Got a Friend in Me” from the movie
5 “Toy Story” and songs covering school-related subjects or school-themed television shows and
6 movies.²⁰³

7 182. The target demographic was also reflected in the sign-up process. In 2016, the
8 birthdate for those signing up for the app defaulted to the year 2000 (i.e., 16 years old).²⁰⁴

9 183. TikTok also cultivated a younger demographic in unmistakable, albeit concealed,
10 ways. In 2020, the *Intercept* reported on a document TikTok prepared for its moderators. In the
11 document, TikTok instructs its moderators that videos of “senior people with too many wrinkles”
12 are disqualified for the “For You” feed because that would make “the video . . . much less
13 attractive [and] not worth[] . . . recommend[ing.]”²⁰⁵

14 184. In December 2016, Zhu confirmed the company had actual knowledge that “a lot
15 of the top users are under 13.”²⁰⁶

16 185. The FTC alleged that despite the company’s knowledge of these and a
17 “significant percentage” of other users who were under 13, the company failed to comply with
18 the COPPA.²⁰⁷

19 186. TikTok settled those claims in 2019 by agreeing to pay what was then the largest

1 ever civil penalty under COPPA and to several forms of injunctive relief.²⁰⁸

2 187. In an attempt to come into compliance with the consent decree and COPPA,
3 TikTok made available to users under 13 what it describes as a “limited, separate app
4 experience.”²⁰⁹ The child version of TikTok restricts users from posting videos through the app.
5 Children can still, however, record and watch videos on TikTok.²¹⁰ For that reason, experts fear
6 the app is “designed to fuel [kids’] interest in the grown-up version.”²¹¹

7 188. These subtle and obvious ways TikTok markets to and obtained a young userbase
8 are manifestations of Zhu’s views about the importance of user engagement to growing TikTok.
9 Zhu explained the target demographic to the *New York Times*: “[T]eenage culture doesn’t exist”
10 in China because “teens are super busy in school studying for tests, so they don’t have the time
11 and luxury to play social media apps.”²¹² By contrast, Zhu describes “[t]eenagers in the U.S. [as]
12 a golden audience.”²¹³

13 189. TikTok’s efforts to attract young users have been successful. *See supra*
14 Section IV.A. Over 66 percent of children ages 13–17 report having used the TikTok app.

15 **c. TikTok Intentionally Maximizes the Time Users Spend on its**
16 **Platform**

17 190. TikTok employs design elements and complex algorithms to simulate variable
18 reward patterns in a flow-inducing stream of short-form videos intended to captivate its user’s
19 attention well after they are satiated.

20 191. Like the other Defendants’ social media platforms, TikTok developed features

²¹³ *Id.*

1 that exploit psychological phenomenon such as IVR and reciprocity to maximize the time users
2 spend on its platform.

3 192. TikTok drives habitual use of its platform using design elements that operate on
4 principles of IVR. For example, TikTok designed its platform to allow users to like and reshare
5 videos. Those features serve as rewards for users who create content on the platform. Receiving
6 a like or reshare indicates that others approve of that user's content and satisfies their natural
7 desire for acceptance.²¹⁴ Studies have shown that "likes" activate the reward region of the
8 brain.²¹⁵ The release of dopamine in response to likes creates a positive feedback loop.²¹⁶ Users
9 will use TikTok—again and again—in hope of another pleasurable experience.²¹⁷

10 193. TikTok also uses reciprocity to manipulate users to use the platform. TikTok
11 invokes reciprocity through features like "Duet." The Duet feature allows users to post a video
12 side-by-side with a video from another TikTok user. Users use Duet as a way to react to the
13 videos of TikTok content creators. The response is intended to engender a reciprocal response
14 from the creator of the original video.

15 194. TikTok, like Snapchat, offers video filters, lenses, and music, which are intended
16 to keep users on its platform. Also, like Snapchat, TikTok has gamified its platform through
17 "challenges." These challenges are essentially campaigns in which users compete to perform a
18 specific task. By fostering competition, TikTok incentivizes users to use its platform.

19 195. TikTok's defining features, its "For You" feed, is a curated, never-ending stream
20 of short-form videos intended to keep users on its platform. In that way, TikTok feeds users
21 beyond the point they are satiated. The ability to scroll ad infinitum, coupled with the variable

²¹⁷ *Id.*

1 reward pattern of TikTok induces a flow-like state for users that distorts their sense of time.²¹⁸

2 That flow is yet another way TikTok increases the time users spend on its platform.

3 **d. TikTok's Algorithms are Manipulative**

4 196. The first thing a user sees when they open TikTok is the "For You" feed, even if
5 they have never posted anything, followed anyone, or liked a video.²¹⁹

6 197. The "For You" page presents users with a "stream of videos" TikTok claims are
7 "curated to [each user's] interests."²²⁰

8 198. According to TikTok, it populates each user's "For You" feed by "ranking videos
9 based on a combination of factors," that include, among others, any interests expressed when a
10 user registers a new account, videos a user likes, accounts they follow, hashtags, captions,
11 sounds in a video they watch, and certain device settings, such as their language preferences and
12 where they are located.²²¹

13 199. Critically, some factors weigh heavier than others. To illustrate, TikTok explains
14 that an indicator of interest, such as "whether a user finishes watching a longer video from
15 beginning to end, would receive greater weight than a weak indicator, such as whether the
16 video's viewer and creator are both in the same country."²²²

17 200. TikTok claims it ranks videos in this way because the length of time a user spends
18 watching a video is a "strong indicator of interest[.]"²²³

19 201. But Zhu offered a different explanation, he repeatedly told interviewers that he

²²² *Id.*

²²³ *Id.*

was “focused primarily on increasing the engagement of existing users.”²²⁴ “Even if you have tens of millions of users,” Zhu explained, “you have to keep them *always* engaged.”²²⁵

202. The decisions TikTok made in programming its algorithms are intended to do just that, as TikTok candidly explained in an internal document titled, “TikTok Algo 101.” The document, which TikTok has confirmed is authentic, “explains frankly that in the pursuit of the company’s ‘ultimate goal’ of adding daily active users, it has chosen to optimize for two closely related metrics in the stream of videos it serves: ‘retention’ — that is, whether a user comes back — and ‘time spent.’”²²⁶

203. “This system means that watch time is key.”²²⁷ Guillaume Chaslot, the founder of Algo Transparency, who reviewed the document at the request of the *New York Times*, explained that “rather than giving [people] what they really want,” TikTok’s “algorithm tries to get people addicted[.]”²²⁸

204. Put another way, the algorithm, coupled with the design elements, condition users through reward-based learning processes to facilitate the formation of habit loops that encourage excessive use.

205. The end result is that TikTok uses “a machine-learning system that analyzes each video and tracks user behavior so that it can serve up a continually refined, never-ending stream of TikToks optimized to hold [user’s] attention.”²²⁹

e. TikTok’s Conduct in Designing and Operating its Platform Has Harmed Youth Mental Health

206. TikTok’s decision to program its algorithm to prioritize user engagement causes

harmful and exploitive content to be amplified to the young market it has cultivated.

207. The Integrity Institute, a nonprofit of engineers, product managers, data scientists, and others, has demonstrated how prioritizing user engagement amplifies misinformation on TikTok (and other platforms).²³⁰ That pattern, the Integrity Institute notes, is “true for a broad range of harms,” such as hate speech and self-harm content, in addition to misinformation.²³¹

208. The Integrity Institute’s analysis builds on a premise Mark Zuckerberg described as the “Natural Engagement Pattern.”²³²

209. This chart shows that as content gets closer and closer to becoming harmful, on average, it gets more engagement.

210. According to Zuckerberg “no matter where we draw the lines for what is allowed,

²³⁰ *Misinformation Amplification Analysis and Tracking Dashboard*, Integrity Inst. (Oct. 13, 2022), <https://integrityinstitute.org/our-ideas/hear-from-our-fellows/misinformation-amplification-tracking-dashboard>; see also Steven Lee Myers, *How Social Media Amplifies Misinformation More Than Information*, N.Y. Times (Oct. 13, 2022), <https://www.nytimes.com/2022/10/13/technology/misinformation-integrity-institute-report.html>.

²³¹ *Misinformation Amplification Analysis and Tracking Dashboard*, Integrity Inst. (Oct. 13, 2022), <https://integrityinstitute.org/our-ideas/hear-from-our-fellows/misinformation-amplification-tracking-dashboard>.

²³² Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, Facebook (Nov. 15, 2018), https://www.facebook.com/notes/mark-zuckerberg/a-blueprint-for-content-governance-and-enforcement/10156443129621634/?hc_location=ufi [https://perma.cc/ZK5C-ZTSX].

as a piece of content gets close to that line, people will engage with it more on average[.]”²³³

211. This has important implications for platform design, as the Integrity Institute explains:

[W]hen platforms use machine learning models to predict user engagement on content, we should expect the predicted engagement to follow the actual engagement. When those predictions are used to rank and recommend content, specifically when a higher predicted engagement score means the content is more likely to be recommended or placed at the top of feeds, then we expect that misinformation will be preferentially distributed and amplified on the platform.²³⁴

212. Put differently, if you use past engagement to predict future engagement, as TikTok does, you are most likely to populate users “For You” feed with harmful content.

213. The Integrity Institute tested its theory by analyzing a category of harmful content: misinformation. Specifically, the Integrity Institute compared the amount of engagement (e.g., number of views) a post containing misinformation received as compared to prior posts from the same content creator.²³⁵

²³³ *Id.*

²³⁴ *Misinformation Amplification Analysis and Tracking Dashboard*, Integrity Inst. (Oct. 13, 2022), <https://integrityinstitute.org/our-ideas/hear-from-our-fellows/misinformation-amplification-tracking-dashboard>.

²³⁵ *Id.*

214. For example, a TikTok user's historical posts received on average 75,000 views. When that same user posted a false statement (as determined by the International Fact Checking Network), the post received 775,000 views. In this case, TikTok amplified the misinformation 10 times more than this user's typical content.²³⁶

215. After analyzing many other posts from other users, the Integrity Institute found that TikTok on average amplified misinformation 29 times more than other content.²³⁷

216. A separate investigation by *NewsGuard* found TikTok's search algorithm similarly amplified misinformation. TikTok's search engine, like its "For You" feed, is a favorite among youth, with 40 percent preferring it (and Instagram) over Google.²³⁸ Unfortunately, *NewsGuard* found that 1 in 5 of the top 20 TikTok search results on prominent news topics, such as school shootings and COVID vaccines, contain misinformation.²³⁹

217. Misinformation is just one type of harmful content TikTok amplifies to its young

²³⁶ *Id.*

²³⁷ *Id.*

²³⁸ Wanda Pogue, *Move Over Google. TikTok is the Go-To Search Engine for Gen Z*, *Adweek* (Aug. 4, 2022), <https://www.adweek.com/social-marketing/move-over-google-tiktok-is-the-go-to-search-engine-for-gen-z/>.

²³⁹ *Misinformation Monitor*, *NewsGuard* (Sept. 2022), <https://www.newsguardtech.com/misinformation-monitor/september-2022/>.

1 users. Investigations by the *Wall Street Journal* found TikTok inundated young users with videos
2 about depression, self-harm, drugs, and extreme diets, to name a few.

3 218. In one investigation, the *Wall Street Journal* found TikTok’s algorithm quickly
4 pushed users down rabbit holes where they were more likely to encounter harmful content. The
5 *Wall Street Journal* investigated how TikTok’s algorithm chose what content to promote to users
6 by having 100 bots scroll through the “For You” feed.²⁴⁰ Each bot was programmed with
7 interests, such as extreme sports, forestry, dance, astrology, and animals.²⁴¹ Those interests were
8 not disclosed in the process of registering their accounts.²⁴² Rather, the bots revealed their
9 interests through their behaviors, specifically the time they spent watching the videos TikTok
10 recommended to them. Consistent with TikTok’s internal “Algo 101” document, the *Wall Street*
11 *Journal* found that time spent watching videos to be “the most impactful data on [what] TikTok
12 serves you.”²⁴³

13 219. Over the course of 26 minutes, one bot watched 224 videos, lingering over videos
14 with hashtags for “depression” or “sad.”²⁴⁴ From then on, 93 percent of the videos TikTok
15 showed this account were about depression or sadness.²⁴⁵

16 220. That is not an outlier. Guillaume Chaslot, a former engineer for Google who
17 worked on the algorithm for YouTube and the founder of Algo Transparency, explained that 90–
18 95 percent of the content users see on TikTok is based on its algorithm.²⁴⁶

19 221. “Even bots with general mainstream interests got pushed to the margin as
20 recommendations got more personalized and narrow.”²⁴⁷ Deep in these rabbit holes, the *Wall*
21 *Street Journal* found “users are more likely to encounter potential harmful content.”²⁴⁸ For
22 example, one video the *Wall Street Journal* encountered encouraged suicide, reading “Just go.

23 ²⁴⁰ *Inside TikTok’s Algorithm: A WSJ Video Investigation*, Wall St. J. (July 21, 2021),

²⁴⁷ *Id.*

²⁴⁸ *Id.*

1 Leave. Stop trying. Stop pretending. You know it and so do they. Do Everyone a favor and
2 leave.”²⁴⁹

3 222. Chaslot explained why TikTok feeds users this content:

4 [T]he algorithm is able to find the piece of content that you’re vulnerable to. That
5 will make you click, that will make you watch, but it doesn’t mean you really like
6 it. And that it’s the content that you enjoy the most. It’s just the content that’s
most likely to make you stay on the platform.²⁵⁰

7 223. A follow-up investigation by the *Wall Street Journal* using bots found “that
8 through its powerful algorithms, TikTok can quickly drive minors—among the biggest users of
9 the app—into endless spools of content about sex and drugs.”²⁵¹

10 224. The bots in this investigation were registered as users aged 13 to 15 and, as
11 before, programmed to demonstrate interest by how long they watched the videos TikTok’s
12 algorithms served them.²⁵² Videos that did not match their interests, the bots scrolled through
13 without pausing.²⁵³ The bots lingered on videos that matched any of their programmed
14 interests.²⁵⁴

15 225. Every second the bot hesitated or re-watched a video again proved key to what
16 TikTok recommended to the accounts, which the *Wall Street Journal* found was used to “drive
17 users of any age deep into rabbit holes of content[.]”²⁵⁵

18 226. For example, one bot was programmed to pause on videos referencing drugs,
19 among other topics. The first day on the platform, the “account lingered on a video of a young
20 woman walking through the woods with a caption” referencing “stoner girls.”²⁵⁶ The following
21 day the bot viewed a video of a “marijuana-themed cake.”²⁵⁷ The “majority of the next thousand

²⁵⁷ *Id.*

1 videos” TikTok directed at the teenage account “tout[ed] drugs and drug use, including
2 marijuana, psychedelics and prescription medication.”²⁵⁸

3 227. TikTok similarly zeroed in on and narrowed the videos it showed accounts
4 whether the bot was programmed to express interest in drugs, sexual imagery, or a multitude of
5 interests. In the first couple of days, TikTok showed the bots a “high proportion of popular
6 videos.”²⁵⁹ “But after three days, TikTok began serving a high number of obscure videos.”²⁶⁰

7 228. For example, a bot registered as a 13-year-old was shown a series of popular
8 videos upon signing up.²⁶¹ The bot, which was programmed to demonstrate interest in sexual text
9 and imagery, also watched sexualized videos. Later, “[i]t experienced one of the most extreme
10 rabbit holes among the *Wall Street Journal*’s accounts. Many videos described how to tie knots
11 for sex, recover from violent sex acts and discussed fantasies about rape.”²⁶² At one point, “more
12 than 90 percent of [one] account’s video feed was about bondage and sex.”²⁶³

13 229. At least 2,800 of the sexualized videos that were shown to the *Wall Street*
14 *Journal*’s bots were labeled as being for adults only.²⁶⁴ Yet, TikTok directed these videos to the
15 minor accounts because, as TikTok told the *Wall Street Journal*, it does not “differentiate
16 between videos it serves to adults and minors.”²⁶⁵

17 230. TikTok also directed a concentrated stream of videos at accounts programmed to
18 express interest in a variety of topics. One such account was programmed to linger over hundreds
19 of Japanese film and television cartoons. “In one streak of 150 videos, all but four” of the videos
20 TikTok directed at the account, “featured Japanese animation—many with sexual themes.”²⁶⁶

21 231. The relentless stream of content intended to keep users engaged “can be
22 especially problematic for young people,” because they may lack the capability to stop watching,

24 ²⁵⁸ *Id.*

²⁶⁶ *Id.*

1 says David Anderson, a clinical psychologist at the nonprofit mental health care provider, The
2 Child Mind Institute.²⁶⁷

3 232. In a similar investigation, the *Wall Street Journal* found TikTok “flood[ed] teen
4 users with videos of rapid-weight-loss competitions and ways to purge food that health
5 professionals say contribute to a wave of eating-disorder cases spreading across the country.”²⁶⁸

6 233. In this investigation, the *Wall Street Journal* analyzed the tens of thousands of
7 videos TikTok recommended to a dozen bots registered as 13-year-olds. As before, the bots were
8 given interests. Bots scrolled quickly through videos that did not match their interests and
9 lingered on videos that did.²⁶⁹ The accounts registered as 13-year-olds were programmed at
10 different times to display interests in weight loss, gambling, and alcohol.²⁷⁰

11 234. “TikTok’s algorithm quickly g[a]ve[] users the content they’ll watch, for as long
12 as they’ll watch it.”²⁷¹ For example, TikTok streamed gambling videos to a bot registered to a
13 13-year-old after it first searched for and favorited several such videos.²⁷² When the bot began
14 demonstrating interest in weight loss videos, the algorithm adapted quickly, as this chart

²⁷² *Id.*

demonstrates.²⁷³

235. After the change in programming, weight-loss videos accounted for well over 40 percent of the content TikTok’s algorithm recommended to the user.²⁷⁴

236. The other accounts were also flooded with weight-loss videos. Over the course of about 45 days, TikTok inundated the accounts with more than 32,000 such videos, “many promoting fasting, offering tips for quickly burning belly fat and pushing weight-loss detox programs and participation in extreme weight-loss competitions.”²⁷⁵ Some encouraged purging, eating less than 300 calories a day, consuming nothing but water some days, and other hazardous diets.²⁷⁶

237. According to Alyssa Moukheiber, a treatment center dietitian, TikTok’s powerful algorithm and the harmful streams of content it directs at young users can tip them into unhealthy behaviors or trigger a relapse.²⁷⁷

238. Unfortunately, it has for the several teenage girls interviewed by the *Wall Street Journal*, who reported developing eating disorders or relapsing after being influenced by the

²⁷³ *Id.*

²⁷⁴ *Id.*

²⁷⁵ *Id.*

²⁷⁶ *Id.*

²⁷⁷ *Id.*

extreme diet videos TikTok promoted to them.²⁷⁸

239. They are not alone. Katie Bell, a co-founder of the Healthy Teen Project, “said the majority of her 17 teenage residential patients told her TikTok played a role in their eating disorders.”²⁷⁹

240. Others, like Stephanie Zerwas, an associate professor of psychiatry at the University of North Carolina at Chapel Hill, could not recount how many of her young patients told her that “I’ve started falling down this rabbit hole, or I got really into this or that influencer on TikTok, and then it started to feel like eating-disorder behavior was normal, that everybody was doing that.”²⁸⁰

241. This trend extends nationwide. The National Association of Anorexia Nervosa and Associated Disorders has fielded 50 percent more calls to its hotline since the pandemic began, most of whom it says are from young people or parents on their behalf.²⁸¹

242. Despite the ample evidence that TikTok’s design and operation of its platform harms the tens of millions of youth who use it, TikTok continues to manipulate them into returning to the platform again and again so that it may serve them ads in between the exploitive content it amplifies.

4. YouTube Intentionally Marketed to and Designed Its Social Media Platform for Youth Users, Substantially Contributing to the Mental Health Crisis

a. The YouTube Platform

243. YouTube is a platform where users can post, share, view, and comment on videos related to a vast range of topics. The platform became available publicly in December 2005 and was acquired by Google in 2006.

244. YouTube reports that today it has over 2 billion monthly logged-in users.²⁸² Even more people use YouTube each month because consumers do not have to register an account to

²⁷⁸ *Id.*

²⁷⁹ *Id.*

²⁸⁰ *Id.*

²⁸¹ *Id.*

²⁸² YouTube for Press, YouTube, <https://blog.youtube/press/> (last visited Dec. 8, 2022).

view a video on YouTube. As a result, anyone can view most content on YouTube—regardless of age.

245. Users, whether logged in or not, watch *billions of hours of videos every day*.²⁸³

246. Users with accounts can post their own videos, comment on others, and since 2010 express their approval of videos through “likes.”²⁸⁴

247. Beginning in 2008 and through today, YouTube has recommended videos to users.²⁸⁵ Early on, the videos YouTube recommended to users were the most popular videos across the platform.²⁸⁶ YouTube admits “[n]ot a lot of people watched those videos[,]” at least not based on its recommendation.²⁸⁷

248. Since then, YouTube has designed and refined its recommendation system using machine learning algorithms that today take into account a user’s “likes,” time spent watching a video, and other behaviors to tailor its recommendations to each user.²⁸⁸

249. YouTube automatically plays those recommendations for a user after they finish watching a video. This feature, known as “autoplay,” was implemented in 2015. YouTube turns the feature on by default, which means videos automatically and continuously play for users unless they turn it off.²⁸⁹

250. YouTube purports to disable by default its autoplay feature for users aged 13–17.²⁹⁰ But, as mentioned above, YouTube does not require users to log in or even have an account to watch videos. For them or anyone who does not self-report an age between 13 and 17, YouTube defaults to automatically playing the videos its algorithm recommends to the user.

²⁹⁰ *Id.*

1 **b. YouTube Markets Its Platform to Youth**

2 251. The primary way YouTube makes money is through advertising and made \$19
3 billion in ad revenue in 2021 alone.²⁹¹

4 252. “In 2012, YouTube concluded that the more people watched, the more ads it
5 could run[.]”²⁹² “So YouTube . . . set a company-wide objective to reach one billion hours of
6 viewing a day[.]”²⁹³

7 253. “[T]he best way to keep eyes on the site,” YouTube realized, was “recommending
8 videos, alongside a clip or after one was finished.”²⁹⁴ That is what led to the development of its
9 recommendation algorithm and autoplay feature described above. *See supra* Section IV.D.4.a.

10 254. YouTube has long known youth use its platforms in greater proportion than older
11 demographics.

12 255. Yet, YouTube has not implemented even rudimentary protocols to verify the age
13 of users. Anyone can watch a video on YouTube without registering an account or reporting their
14 age.

15 256. Instead, YouTube leveraged its popularity among youth to increase its revenue
16 from advertisements by marketing its platform to popular brands of children’s products. For
17 example, Google pitched Mattel, the maker of Barbie and other popular kids’ toys, by telling its
18 executives that “YouTube is today’s leader in reaching children age 6–11 against top TV
19 channels.”²⁹⁵ When presenting to Hasbro, the maker of Play-Doh, My Little Pony, and other
20 kids’ toys, Google touted that “YouTube was unanimously voted as the favorite website for kids
21 2-12,” and that “93% of tweens visit YouTube to watch videos.”²⁹⁶ In a different presentation to
22

²⁹⁶ *Id.* Exhibit B.

1 Hasbro, YouTube was referred to as “[t]he new ‘Saturday Morning Cartoons,’” and claimed that
2 YouTube was the “#1 website regularly visited by kids” and “the #1 source where children
3 discover new toys + games.”²⁹⁷

4 257. In addition to turning a blind eye towards underage users of its platform,
5 YouTube developed and marketed a version of YouTube specifically for children under the age
6 of 13.

7 258. YouTube’s efforts to attract young users have been successful. *See supra*
8 Section IV.A. A vast majority, 95 percent, of children ages 13–17 have used YouTube.²⁹⁸

9 **c. YouTube Intentionally Maximizes the Time Users Spend on its**
10 **Platform**

11 259. Google designed YouTube to maximize user engagement, predominantly through
12 the amount of time users spend watching videos. To that end, Google employs design elements
13 and complex algorithms to create a never-ending stream of videos intended to grip user’s
14 attention.

15 260. Like the other Defendants’ social media platforms, Google developed features
16 that exploit psychological phenomenon such as IVR to maximize the time users spend on
17 YouTube.

18 261. YouTube uses design elements that operate on principles of IVR to drive both
19 YouTube content creators and YouTube viewers into habitual, excessive use. Google designed
20 YouTube to allow users to like, comment, and share videos and to subscribe to content creator’s
21 channels. These features serve as rewards for users who create and upload videos to YouTube.
22 As described above, receiving a like indicates others’ approval and activates the reward region of
23 the brain.²⁹⁹ The use of likes, therefore, encourages users to use YouTube over and over, seeking
24 future pleasurable experiences.

25 262. YouTube also uses IVR to encourage users to view others content. One of the

26 ²⁹⁷ *Id.* Exhibit C.

27 ²⁹⁸ *Id.*

28 ²⁹⁹ *See, e.g.,* Lauren E. Sherman *et al.*, *The Power of the Like in Adolescence: Effects of Peer Influence on Neural and Behavioral Responses to Social Media*, 27(7) Psych. Sci. 1027–35 (July 2016), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5387999/>.

ways Google employs IVR into YouTube’s design is through subscriber push notifications and emails, which are designed to prompt users to watch YouTube content and encourages excessive use of the platform. When a user “subscribes” to another user’s channel, they receive notifications every time that user uploads new content, prompting them to open YouTube and watch the video.³⁰⁰

263. One of YouTube’s defining features is its panel of recommended videos. YouTube recommends videos to users on both the YouTube home page and on every individual video page in an “Up Next” panel.³⁰¹ This list automatically populates next to the video a user is currently watching. This recommended video list is a never-ending feed of videos intended to keep users on the app watching videos without having to affirmatively click or search for other videos. This constant video stream, comprised of videos recommended by YouTube’s algorithms, is the primary way Google increases the time users spend on YouTube.

d. YouTube’s Algorithms are Manipulative

264. Google uses algorithms throughout YouTube to recommend videos to users. These algorithms select videos that populate the YouTube homepage, rank results in user searches, and suggest videos for viewers to watch next. These algorithms are manipulative by design and increase the amount of time users spend on YouTube.

265. Google began building the YouTube recommendation system in 2008.³⁰² When Google initially developed its recommendation algorithms, the end goal was to maximize the amount of time users spend watching YouTube videos. A YouTube spokesperson admitted as much, saying YouTube’s recommendation system was initially set up to “optimize” the amount of time users watch videos.³⁰³

³⁰⁰ *Manage YouTube Notifications*, YouTube, <https://support.google.com/youtube/answer/3382248?hl=en&co=GENIE.Platform%3DDesktop> (last visited Dec. 8, 2022).

1 266. Former YouTube engineer Guillaume Chaslot has also stated that when he worked
2 for YouTube designing its recommendation algorithm, the priority was to keep viewers on the
3 site for as long as possible to maximize “watch time.”³⁰⁴ Chaslot further stated that “[i]ncreasing
4 users’ watch time is good for YouTube’s business model” because the more people watch
5 videos, the more ads they see and YouTube’s advertising revenue increases.³⁰⁵

6 267. Early on, one of the primary metrics behind YouTube’s recommendation
7 algorithm was clicks. As YouTube describes, “[c]licking on a video provides a strong indication
8 that you will also find it satisfying.”³⁰⁶ But as YouTube learned, clicking on a video does not
9 mean a user actually watched it. Thus, in 2012, YouTube also started tracking watch time—the
10 amount of time a user spends watching a video.³⁰⁷ YouTube made this switch to keep people
11 watching for as long as possible.³⁰⁸ In YouTube’s own words, this switch was successful. “These
12 changes have so far proved very positive -- primarily less clicking, more watching. We saw the
13 amount of time viewers spend watching videos across the site increase immediately[.]”³⁰⁹ And in
14 2016, YouTube started measuring “valued watchtime” via user surveys to ensure that viewers are
15 satisfied with their time spent watching videos on YouTube.³¹⁰ All of these changes to
16 YouTube’s algorithms were made to ensure that users spend more time watching videos and ads.

17 268. YouTube’s current recommendation algorithm is based on deep-learning neural

<https://blog.youtube/inside-youtube/on-youtubes-recommendation-system/>.

1 networks that retune its recommendations based on the data fed into it.³¹¹ While this algorithm is
2 incredibly complex, its process can be broken down into two general steps. First, the algorithm
3 compiles a shortlist of several hundred videos by finding videos that match the topic and other
4 features of the video a user is currently watching.³¹² Then the algorithm ranks the list according
5 to the user's preferences, which the algorithm learns by tracking a user's clicks, likes, and other
6 interactions.³¹³ In short, the algorithms track and measure a user's previous viewing habits and
7 then finds and recommends other videos the algorithm thinks will hold the consumer's attention.

8 269. YouTube's recommendation system "is constantly evolving, learning every day
9 from over 80 billion pieces of information."³¹⁴ Some of the information the recommendation
10 algorithm relies on to deliver recommended videos to users includes users' watch and search
11 history, channel subscriptions, clicks, watch time, survey responses, shares, likes, dislikes, users'
12 location (country) and the time of day.³¹⁵

13 270. The recommendation algorithm can determine what "signals" or factors are more
14 important to individual users.³¹⁶ For example, if a user shares every video they watch, including
15 videos the user gives a low rating, the algorithm learns not to heavily factor the user's shares
16 when recommending content.³¹⁷ Thus, the recommendation algorithm "develops dynamically" to
17 individual user's viewing habits and makes highly specific recommendations to keep individual

³¹⁷ *Id.*

1 users watching videos.³¹⁸

2 271. In addition to the algorithm's self-learning, Google engineers consistently update
3 YouTube's recommendation and ranking algorithms, making several updates every month,
4 according to YouTube Chief Product Officer Neal Mohan.³¹⁹ The end goal is to increase the
5 amount of time users spend watching content on YouTube.

6 272. Because Google has designed and refined its algorithms to be manipulative, these
7 algorithms are incredibly successful at getting users to view content based on the algorithm's
8 recommendation. Mohan stated in 2018 that YouTube's AI-driven recommendations are
9 responsible for 70 percent of the time users spend on YouTube.³²⁰ In other words, 70 percent of
10 all YouTube content that users watch was recommended to users by YouTube's algorithms as
11 opposed to users purposely searching for and identifying the content they watch.

12 273. Mohan also stated that recommendations keep mobile device users watching
13 YouTube for more than 60 minutes at a time on average.³²¹

14 274. Given that people watch more than one billion hours of YouTube videos daily,³²²
15 YouTube's recommendation algorithms are responsible for hundreds of millions of hours that
16 users spend watching videos on YouTube.

17 **e. YouTube's Conduct in Designing and Operating its Platform Has**
18 **Harmed Youth Mental Health**

19 275. By designing YouTube's algorithms to prioritize and maximize the amount of
20 time users spend watching videos, Google has harmed youth mental health. In particular,
21 YouTube has harmed youth mental health by recommending content to youth through its
22 algorithms.

<https://www.nytimes.com/2022/04/21/technology/youtube-rabbit-hole.html>.

276. YouTube’s algorithms push its young users down rabbit holes where they are likely to encounter content that is violent, sexual, or encourages self-harm, among other types of harmful content.

277. Research by the Tech Transparency Project (“TTP”) shows that YouTube Kids fed children content that involved drug culture, guns, and beauty and diet tips that could lead to harmful body image issues.³²³ Among the videos TTP found were step-by-step instructions on how to conceal a gun, guides on how to bleach one’s face at home, and workout videos emphasizing the importance of burning calories and telling kids to “[w]iggle your jiggle.”³²⁴ This research shows that YouTube Kids not only lets inappropriate content slip through its algorithmic filters, but actively directed the content to kids through its recommendation engine.

278. Similar examples abound. Amanda Kloer, a campaign director with the child safety group ParentsTogether, spent an hour on her child’s YouTube Kids profile and found videos “encouraging kids how to make their shirts sexier, a video in which a little boy pranks a girl over her weight, and a video in which an animated dog pulls objects out of an unconscious animated hippo’s butt.”³²⁵ Another parent recounted that YouTube Kids’ autoplay function led her 6-year-old daughter to an animated video that encouraged suicide.³²⁶

279. Other youth are fed content by YouTube’s algorithms that encourages self-harm. As reported by PBS Newshour, a middle-schooler named Olivia compulsively watched YouTube videos every day after she came home from school.³²⁷ Over time she became depressed and started searching for videos on how to commit suicide. Similar videos then gave her the idea of

1 overdosing. Weeks later she was in the hospital after “downing a bottle of Tylenol.”³²⁸

2 Ultimately, she was admitted into rehab for digital addiction because of her compulsive

3 YouTube watching.³²⁹

4 280. According to the Pew Research Center, 46 percent of parents say their child has
5 encountered inappropriate videos on YouTube.³³⁰ And children are not encountering these videos
6 on their own volition. Rather, they are being fed harmful and inappropriate videos through
7 YouTube’s algorithms. Again, YouTube’s AI-driven recommendations are responsible for 70
8 percent of the time users spend on YouTube.³³¹

9 281. Other reports have also found that YouTube’s recommendation algorithm
10 suggests a wide array of harmful content, including videos that feature misinformation, violence,
11 and hate speech, along with other content that violates YouTube’s policies.³³² A 2021
12 crowdsourced investigation from the Mozilla Foundation involving 37,000 YouTube users
13 revealed that 71 percent of all reported negative user experiences came from videos
14 recommended by YouTube to users.³³³ And users were 40 percent more likely to report a
15 negative experience with a video recommended by YouTube’s algorithm than with a video they
16 searched for.³³⁴

17 282. The inappropriate and disturbing content YouTube’s algorithms expose children
18 to has adverse effects on mental health. Mental health experts have warned that YouTube is a
19 growing source of anxiety and inappropriate sexual behavior among kids under the age of 13.³³⁵

283. Even though much of the content YouTube’s algorithms feed to youth is harmful, it can activate the reward circuitry in the brain such that it encourages youth to spend more time watching videos on YouTube. According to Donna Volpitta, founder of The Center for Resilient Leadership, watching “fear-inducing videos cause the brain to receive a small amount of dopamine,” which acts as a reward and creates a desire to do something over and over.³³⁶ This dopaminergic response is in addition to the reward stimulus YouTube provides users through IVR.

284. Mental health professionals across the country have seen an increase in children experiencing mental health issues because of YouTube. Natasha Daniels, a child psychotherapist in Arizona, has said she has seen a rise in cases of children suffering from anxiety because of videos they watched on YouTube.³³⁷ Because of their anxiety, these children “exhibit loss of appetite, sleeplessness, crying fits, and fear.”³³⁸

285. In addition to causing anxiety, watching YouTube is also associated with insufficient sleep.³³⁹ In one study on the effect of app use and sleep, YouTube was the only app consistently associated with negative sleep outcomes.³⁴⁰ For every 15 minutes teens spent watching YouTube, they had a 24 percent greater chance of getting fewer than seven hours of sleep.³⁴¹ YouTube is particularly problematic on this front because of YouTube’s recommendation and autoplay feature make it “so easy to finish one video” and watch the next, said Dr. Alon Avidan, director of the UCLA Sleep Disorders Center.³⁴² In turn, insufficient sleep

1 is associated with poor health outcomes.³⁴³ Thus, YouTube exacerbates an array of youth mental
2 health issues by contributing to sleep deprivation.

3 286. Despite the extensive evidence that YouTube’s design and algorithms harm
4 millions of youth, Google continues to promote YouTube unchanged, manipulating youth into
5 staying on the platform and watching more and more videos so that it can increase its ad revenue.

6 **E. The Effect of Social Media Use on Schools**

7 287. School districts are uniquely harmed by the current youth mental health crisis.
8 This is because schools are one of the main providers for mental health services for school-aged
9 children.³⁴⁴ Indeed, over 3.1 million children ages 12–17 received mental health services through
10 an education setting in 2020, more than any other non-specialty mental health service setting.³⁴⁵

11 288. Most schools offer mental health services to students. In the 2021–22 school year,
12 96 percent of public schools reported offering at least one type of mental health service to their
13 students.³⁴⁶ But 88 percent of public schools did not strongly agree that they could effectively
14 provide mental health services to all students in need.³⁴⁷ The most common barriers to providing
15 effective mental health services are (1) insufficient number of mental health professionals; (2)
16 inadequate access to licensed mental health professionals; and (3) inadequate funding.³⁴⁸ Student
17 opinions also reflect that schools are unable to provide adequate mental health services. Less
18 than a quarter of students in grades 6–12 report accessing counseling or psychological services
19 when they are upset, stressed, or having a problem.³⁴⁹ And of the students who access mental

[content/uploads/2022/10/YouthTruth_EMH_102622.pdf](https://youthtruthsurvey.org/wp-content/uploads/2022/10/YouthTruth_EMH_102622.pdf).

1 health services, only 41 percent of middle schoolers and 36 percent of high schoolers are
2 satisfied with the services they receive.³⁵⁰

3 289. In part, schools are struggling to provide adequate mental health services because
4 of the increase in students seeking these services. More than two-thirds of public schools
5 reported an increase in the percent of students seeking mental health services from school since
6 the start of the pandemic.³⁵¹

7 290. During this same period, adolescents increased their social media use, also raising
8 levels of excessive and problematic use of digital media.³⁵² And these higher rates of social
9 media use are related to higher “ill-being.”³⁵³ Thus, the increase in adolescent social media use
10 during the pandemic has caused an increase in adolescents experiencing mental health problems.

11 291. That relationship is reflected in reports from public schools. Over 75 percent of
12 public schools reported an increase in staff expressing concerns about student depression,
13 anxiety, and other disturbances since the start of the pandemic.³⁵⁴ Students receiving mental
14 health services in educational settings predominately do so because they “[f]elt depressed,”
15 “[t]hought about killing [themselves] or tried to” or “[f]elt very afraid and tense.”³⁵⁵

16 292. Anxiety disorders are also up, affecting 31.9 percent of adolescents between 13
17 and 18 years old.³⁵⁶ “Research shows that untreated teenagers with anxiety disorders are at
18 higher risk to perform poorly in school, miss out on important social experiences, and engage in

substance abuse.”³⁵⁷

293. According to the National Alliance on Mental Illness, “[s]tudents ages 6–17 with mental, emotional or behavioral concerns are **3x times more likely** to repeat a grade,” and “[h]igh school students with significant symptoms of depression are more than **twice as likely** to drop out compared to their peers.”³⁵⁸

294. Schools are struggling not only to provide students with mental health services but also to deliver an adequate education because of the youth mental health crisis. Students in grades 6–12 identify depression, stress, and anxiety as the most prevalent obstacles to learning.³⁵⁹ Most middle school and high school students also fail to get enough sleep on school nights, which contributes to poor academic performance.³⁶⁰ These negative mental health outcomes are also the most common symptoms of excessive social media use.

295. The youth mental health crisis has also caused a wide range of other behavioral issues among students that interfere with schools’ ability to teach. In 2022, 61 percent of public schools saw an increase in classroom disruptions from student misconduct compared to school years before the pandemic.³⁶¹ Fifty-eight percent of public schools also saw an increase in rowdiness outside of the classroom, 68 percent saw increases in tardiness, 27 percent saw increases in students skipping classes, 55 percent saw increases in the use of electronic devices when not permitted, 37 percent saw an increase in bullying, 39 percent saw an increase in

³⁶¹ 2022 School Pulse Panel, U.S. Dep’t Educ., Inst. Educ. Sci. (2022), <https://ies.ed.gov/schoolsurvey/spp/>.

1 physical fights between students, and 46 percent saw an increase in threats of fights between
2 students.³⁶²

3 296. Further exacerbating school's struggle to teach is the fact students are not
4 showing up to school. Indeed, student absenteeism has greatly increased. In the 2021–22 school
5 year, 39 percent of public schools experienced an increase in chronic student absenteeism
6 compared to the 2020–21 school year, and 72 percent of public schools saw increased chronic
7 student absenteeism compared to school years before the pandemic.³⁶³ Following suit, vandalism
8 has increased in 2022, with 36 percent of public schools reporting increased acts of student
9 vandalism on school property.³⁶⁴

10 297. School districts have borne increased costs and expenses in response to the youth
11 mental health crisis. These costs include:

- 12 • hiring additional mental health personnel (41 percent of public schools added staff
13 to focus on student mental health);³⁶⁵
- 14 • developing additional mental health resources (46 percent of public schools
15 created or expanded mental health programs for students, 27 percent added
16 student classes on social, emotional, and mental health and 25 percent offered
17 guest speakers for students on mental health);³⁶⁶
- 18 • training teachers to help students with their mental health (56 percent of public
19 schools offered professional development to teachers on helping students with
20 mental health);³⁶⁷
- 21 • increasing disciplinary services and hiring additional personnel for disciplinary
22 services in response to increased bullying and harassment over social media;
- 23 • addressing property damaged as a result of students acting out because of mental,
24 social, and emotional problems Defendants' conduct caused;
- 25 • diverting time and resources from instruction activities to notify parents and
26 guardians of students' behavioral issues and attendance;

- updating school policies to address use of Defendants' platforms.

F. Impact of Social Media Use on Plaintiff

298. Plaintiff Mesa Public Schools is the largest school district in Arizona and is located in Maricopa County, Arizona, the largest county in Arizona and the fourth most-populous county in the United States. Mesa Public Schools operates 78 schools, serving approximately 58,000 students.

299. Mesa Public Schools has been directly impacted by the mental health crisis among youth in its community.

300. There has been a surge in the proportion of youth in Plaintiff's community who say they cannot stop or control their anxiety, who feel so sad and hopeless that they stop doing the activities that they used to love, who are considering suicide, who made plans to commit suicide, and who have attempted to commit suicide.

301. Suicide was the third leading cause of death of children in Arizona in 2022.³⁶⁸ Arizona's teenage suicide rates are higher than the national average, and nearly 1 in 5 high school students say they have seriously considered attempting suicide in the past year.³⁶⁹

302. Teen Lifeline, Arizona's only teen-to-teen crisis hotline, serves 25 schools in Mesa Public Schools. In June and July of 2020, Teen Lifeline reported a 46 percent increase in calls and texts from stressed teens.³⁷⁰ And from January to August 2021, Teen Lifeline saw a 30 percent increase from the prior year, with 30 percent of calls and texts coming from teens

³⁶⁸ Sara Crocker, *Not All Right: Arizona's Youth Mental Health Emergency*, Phx. Mag. (Dec. 27, 2022), <https://www.phoenixmag.com/2022/12/27/not-all-right-arizonas-youth-mental-health-emergency/>.

³⁶⁹ Kim Powell, *Teen Suicide Rates in Arizona Higher than National Average*, KOLD News 13 (Sept. 15, 2021), <https://www.kold.com/2021/09/15/teen-suicide-rates-arizona-higher-than-national-average/>.

³⁷⁰ Jim Walsh, *As Classrooms Reopen, Students' Mental Health a Big Concern*, E. Valley Trib. (Sept. 22, 2020), https://www.eastvalleytribune.com/news/as-classrooms-reopen-students-mental-health-a-big-concern/article_a9f6d8fa-fc39-11ea-8fc7-13fb3d16b648.html.

1 struggling with thoughts of suicide.³⁷¹ The most common reason teenagers call Teen Lifeline is
2 because they are having suicidal thoughts.³⁷²

3 303. Similarly, Community Bridges, a Mesa-based behavioral healthcare provider,
4 received increased referrals for children and teenagers in the East Valley area in 2020.³⁷³ “We
5 have seen an increase in referrals for suicidal ideation, anxiety and depression,” said Natalia
6 Chimbo Andrade, Community Bridges’ director of community education and outreach.³⁷⁴

7 304. These increases in anxiety, depression, and suicidal behavior have contributed to
8 students’ increased behavioral problems in Plaintiff’s schools. During the 2021-22 school year,
9 more of Mesa Public Schools’ students got into trouble than in previous years. Mesa Public
10 Schools recorded over 18,000 incidents involving discipline, an increase of nearly 3,500
11 disciplinary incidents from the 2018-2019 school year.³⁷⁵

12 305. The increase in students who report suffering from anxiety and depression and the
13 increase in behavioral issues have not gone unnoticed. “We know that many of these incidents of
14 aggression and those other policy violations are begging for additional mental health crisis
15 counseling,” said Mesa Public Schools Associate Superintendent Holly Williams.³⁷⁶

16 306. While Plaintiff deals with increasing disciplinary incidents on the one hand, it
17 must also deal with absent students on the other. Indeed, chronic absenteeism has increased, with
18 38 percent of Mesa Public Schools’ students missing more than 10 percent of school days during
19 the 2021-22 school year.³⁷⁷

21 ³⁷¹ Kim Powell, *Teen Suicide Rates in Arizona Higher than National Average*, KOLD News 13
22 (Sept. 15, 2021), <https://www.kold.com/2021/09/15/teen-suicide-rates-arizona-higher-than-national-average/>.

28 ³⁷⁷ *Id.*

307. The adverse effects of Defendants’ platforms on students’ mental health are well-captured by a video created by a Mesa Public Schools student for her English Composition class, entitled “Nomophobia,” which she describes as “a fear of being detached from mobile phone connectivity.”³⁷⁸ This fear is corroborated by the data above, which shows that students are on Defendants’ platforms almost constantly. The video shows a figure repeatedly checking their phone until they are sucked into the screen. The figure then emerges with the phone always in their hand and it becomes chained to their wrist. When the figure realizes they are chained to their phone and breaks the chain, they are sucked into a dark pit. They are then surrounded by, and eventually killed by, social media icons, including Instagram, Facebook, Snapchat, and YouTube.

308. The pandemic and corresponding increase in time youth spend on Defendants’ platforms have intensified the youth mental health crisis and the behavioral issues Plaintiff’s students are experiencing.

309. The current youth mental health crisis has led to a marked increase in the number of Plaintiff’s students in crisis, acting out, and in need of mental health services.

310. In an attempt to address the decline in students’ mental, emotional, and social health, Plaintiff has been forced to divert resources and expend additional resources to:

- a. hire additional personnel, including counselors and medical professionals to address mental, emotional, and social health issues;³⁷⁹
- b. develop additional resources to address mental, emotional, and social health issues;³⁸⁰
- c. increase training for teachers and staff to identify students exhibiting symptoms

affecting their mental, emotional, and social health;³⁸¹

d. educate teachers, staff, and members of the community about the harms caused by Defendants' wrongful conduct;

e. develop lesson plans to teach students about the dangers of using Defendants' platforms;

f. educate students about the dangers of using Defendants' platforms;

g. update its student handbook to address use of Defendants' platforms; and

h. update school policies to address use of Defendants' platforms.

311. Additionally, more students have been acting out as a result of the decline Defendants caused in students' mental, emotional, and social health.³⁸² Resultingly, Plaintiff has been forced to divert resources and expend additional resources to:

a. repair property damaged as a result of the exploitive and harmful content Defendants directed to students;³⁸³

b. increase disciplinary services;

c. confiscate devices on which students were compelled by Defendants' conduct to use while in class or school campuses to access Defendants' platforms;

d. meet with students and the parents of students caught using Defendants' platforms at school;

e. divert time and resources from instructional activities to notify parents and guardians of students' behavioral issues and attendance; and

f. investigate and respond to threats made against schools and students over social

media.³⁸⁴

312. As of the 2022–23 school year, Plaintiff employs over 150 school counselors across the district.³⁸⁵ Eight of Plaintiff’s high schools have one full time social worker.³⁸⁶ Twenty-eight schools have a formal partnership with a behavioral health agency, which provide intake, tele-health services and therapy at the school or in the home.³⁸⁷

313. But even with these resources, Plaintiff cannot keep up with the increased need for mental health services because of the youth mental health crisis.

314. As a result, the rest of Plaintiff’s staff must fill in the cracks to help students with mental health concerns.

315. Recently, the Arizona legislature recognized the increasing severity of the youth mental health crisis. In June 2022, in response to a spike of teen suicides in the East Valley, then-state House Speaker Rusty Bowers formed a special committee charged with trying to find solutions to the mental health crisis.³⁸⁸

316. Representative Joanna Osborne, the head of the Teen Mental Health House Ad Hoc Committee (“House Committee”), noted the extent of the youth mental health crisis and social media’s role in exacerbating the problem. “Teenage children today are faced with tremendous stress and pressure along the path to adulthood, and far too many succumb to substance abuse and suicidal ideations,” said Osborne.³⁸⁹ “Struggles because of the pandemic and social media aggravate the situation further. ³⁹⁰ *Id.*

1 317. Arizona Governor Katie Hobbs has also emphasized the importance of addressing
2 the youth mental health crisis. In her inaugural State of the State address, Governor Hobbs
3 acknowledged that Arizona school districts, like Plaintiff, lack adequate resources to address the
4 ongoing youth mental health crisis.³⁹¹ “We need to prioritize hiring social workers and
5 counselors for our schools to address the mental health crisis among children and teens,”
6 Governor Hobbs said.³⁹² “Currently each counselor in an Arizona school provides services for
7 more than 700 kids on average. That’s the highest ratio in the nation and nearly three times the
8 recommended standard.”³⁹³

9 318. But Plaintiff requires significant and long-term funding to address the nuisance
10 Defendants have created and amplified. Such funding should not fall at the foot of the legislature
11 and, in turn, the public. Rather, Defendants must bear the burden of remedying their wrongs. It is
12 time, as President Biden declared, to get “all Americans the mental health services they need”³⁹⁴
13 and “hold social media companies accountable[.]”³⁹⁵

14 **V. SECTION 230 IS NO SHIELD FOR DEFENDANTS’ CONDUCT**

15 319. Plaintiff anticipates that Defendants will raise section 230 of the Communications
16 Decency Act, 47 U.S.C. § 230(c)(1), as a shield for their conduct. But section 230 is no shield for
17 Defendants’ own acts in designing, marketing, and operating social media platforms that are
18 harmful to youth.

19 320. Section 230 provides immunity from liability only to “(1) a provider or user of an
20 interactive computer service (2) whom a plaintiff seeks to treat, under a state law cause of action,
21 as a publisher or speaker (3) of information provided by another information content provider.”
22 *Barnes v. Yahoo!, Inc.*, 570 F.3d 1096, 1100–01 (9th Cir. 2009), *as amended* (Sept. 28, 2009).

28 ³⁹⁴ President Biden, State of the Union Address (Mar. 1, 2022) (transcript available at
<https://www.whitehouse.gov/state-of-the-union-2022/>).

³⁹⁵ President Biden, State of the Union Address (Feb. 7, 2023) (transcript available at
<https://www.whitehouse.gov/state-of-the-union-2023/>).

321. Publication generally involves traditional editorial functions, such as reviewing, editing, and deciding whether to publish or to withdraw from publication third-party content. *Lemmon v. Snap, Inc.*, 995 F.3d 1085, 1091 (9th Cir. 2021).

322. Publication does not, however, include duties related to designing and marketing a social media platform. *See id.* at 1092–93.

323. Plaintiff expressly disavows any claims or allegations that attempt to hold Defendants liable as the publisher or speaker of any information provided by third parties.

324. Section 230 does not shield Defendants’ conduct because, among other considerations: (1) Defendants are liable for their own affirmative conduct in recommending and promoting harmful content to youth; (2) Defendants are liable for their own actions designing and marketing their social media platforms in a way that causes harm; (3) Defendants are liable for the content they create that causes harm; and (4) Defendants are liable for distributing, delivering, and/or transmitting material that they know or have reason to know is harmful, unlawful, and/or tortious.

325. First, Plaintiff is not alleging Defendants are liable for what third parties have said on Defendants’ platforms but, rather, for Defendants’ own conduct. As described above, Defendants affirmatively recommend and promote harmful content to youth, such as pro-anorexia and eating disorder content. Recommendation and promotion of damaging material is not a traditional editorial function and seeking to hold Defendants liable for these actions is not seeking to hold them liable as a publisher or speaker of third party-content.

326. Second, Plaintiff’s claims arise from Defendants’ status as designers and marketers of dangerous social media platforms that have injured the health, comfort, and repose of its community. The nature of Defendants’ platforms centers around Defendants’ use of algorithms and other designs features that encourage users to spend the maximum amount of time on their platforms—not on particular third-party content. The algorithms Defendants employ adapt to the social media activity of individual users to promote whatever content will trigger a particular user’s attention and maximize their screen time. That is, Defendants’ algorithms are user-focused rather than content-based and are indifferent to the nature and type

1 of content they promote to users, provided that such content increases the time users spend on
2 their platforms. In that respect, they are content neutral.

3 327. Third, Defendants are liable for the content they create. In addition to content
4 such as Snapchat filters which promote body dysmorphia, Defendants send emails and
5 notifications to youth including material they create which often promotes certain harmful
6 content.

7 328. Fourth, Plaintiff does not seek to hold Defendants liable as publishers or speakers
8 of information provided by other content providers, but instead Plaintiff seeks to hold them liable
9 for distributing material they know or should know is harmful or unlawful. *See Malwarebytes,*
10 *Inc. v. Enigma Software Grp. USA, LLC*, 141 S. Ct. 13 (2020) (statement of Justice Thomas
11 respecting denial of certiorari discussing the distinction between distributor and publisher
12 liability); *cf. Restatement (Second) of Torts* § 581 (Am. Law Inst. 1977) (“[O]ne who only
13 delivers or transmits defamatory matter published by a third person is subject to liability if, but
14 only if, he knows or has reason to know of its defamatory character.”).

15 329. Ultimately, Plaintiff’s claim is not predicated on information provided by another
16 information content provider. Rather, Plaintiff’s claim rests on Defendants’ conduct which has
17 resulted in the current public health crisis among youth mental health.

18 VI. CAUSE OF ACTION

19 COUNT ONE — PUBLIC NUISANCE

20 330. Plaintiff incorporates by reference each and every preceding paragraph.

21 331. Plaintiff brings this claim under Arizona public nuisance law as to all Defendants.

22 332. Under Arizona law, a public nuisance is an unreasonable interference with a right
23 common to the general public and which affects a considerable number of people or an entire
24 community or neighborhood.

25 333. Defendants have created a mental health crisis in Plaintiff’s schools, injuring the
26 public health and safety in Plaintiff’s community and interfering with the operations, use, and
27 enjoyment of the property of Plaintiff.

28 334. Defendants, by designing, developing, marketing, supplying, promoting,

1 advertising, operating, and distributing their respective social media platforms for use by
2 students in Plaintiff's schools in the manner described above, have engaged in conduct that
3 substantially interferes with the health and safety of the students of Plaintiffs, substantially
4 interferes with the functions and operations of Plaintiff's schools, and harms the health, safety,
5 and welfare of the Plaintiff's community.

6 335. Each Defendant has created or assisted in the creation of a condition that is
7 injurious to the health, safety, and welfare of the Plaintiff's community and interferes with the
8 educational environment for students, teachers, and administrators in Plaintiff's schools.
9 Defendants have each created or assisted in the creation of a condition that significantly disrupts
10 the daily operations and functioning of Plaintiff's schools.

11 336. The health and safety of the students and employees of Plaintiff's schools,
12 including those who use, have used, or will use Defendants' platforms, as well as those affected
13 by others' use of their platforms, are matters of substantial public interest and of legitimate
14 concern to Plaintiff.

15 337. Defendants' conduct has affected and continues to affect a substantial number of
16 people within Plaintiff's community and is likely to continue causing significant harm.

17 338. Defendants' conduct is ongoing and continues to produce permanent and long-
18 lasting damage.

19 339. Defendants' conduct substantially and unreasonably interferes with public health,
20 safety, and the right to a public education in a safe and healthy environment. In that regard, and
21 in other ways discussed herein, the public nuisance created or maintained by Defendants was
22 connected to Plaintiff's property, including but not limited to school buildings.

23 340. This harm to youth mental health and the corresponding impacts to public health,
24 safety, and the welfare of Plaintiff's community outweighs any social utility of Defendants'
25 wrongful conduct.

26 341. The rights, interests, and inconvenience to Plaintiff's community far outweighs
27 the rights, interests, and inconvenience to Defendants, who have profited tremendously from
28 their wrongful conduct.

1 342. But for Defendants’ actions, Plaintiff’s students would not use social media
2 platforms as frequently or long as they do today, be deluged with exploitive and harmful content
3 to the same degree, and the public health crisis that currently exists as a result of Defendants’
4 conduct would have been averted.

5 343. Logic, common sense, justice, policy, and precedent indicate Defendants’ unfair
6 and deceptive conduct has caused the damage and harm complained of herein. Defendants knew
7 or reasonably should have known that their design, development, marketing, supply, promotion,
8 advertisement, operation, and distribution of their platforms would cause students to use their
9 platforms excessively, that their marketing methods were designed to appeal to youth, and that
10 their active efforts to increase youth use of their platforms were causing harm to youth and to
11 schools, including youth who attend Plaintiff’s schools.

12 344. Thus, the public nuisance caused by Defendants was reasonably foreseeable,
13 including the financial and economic losses incurred by Plaintiff.

14 345. Alternatively, Defendants’ conduct was a substantial factor in bringing about the
15 public nuisance even if a similar result would have occurred without it. By designing,
16 developing, marketing, supplying, promoting, advertising, operating, and distributing their
17 platforms in a manner intended to maximize the time youth spend on their respective
18 platforms—despite knowledge of the harms to youth from their wrongful conduct—Defendants
19 directly facilitated the widespread, excessive, and habitual use of their platforms and the public
20 nuisance affecting Plaintiff. By seeking to capitalize on their success by refining their platforms
21 to increase the time youth spend on their platforms, Defendants directly contributed to the public
22 health crisis and the public nuisance affecting Plaintiff.

23 346. Defendants’ conduct is especially injurious to Plaintiff because, as a direct and
24 proximate cause of Defendants’ conduct creating or assisting in the creation of a public nuisance,
25 the educational environment within Plaintiff’s schools has been and will continue to be
26 substantially harmed.

27 347. Plaintiff has had to take steps to mitigate the harm and disruption caused by
28 Defendants’ conduct, including the following:

- a. hiring additional personnel to address mental, emotional, and social health issues;
- b. developing additional resources to address mental, emotional, and social health issues;
- c. increasing training for teachers and staff to identify students exhibiting symptoms affecting their mental, emotional, and social health;
- d. training teachers, staff, and members of the community about the harms caused by Defendants' wrongful conduct;
- e. developing lesson plans to teach students about the dangers of using Defendants' platforms;
- f. educating students about the dangers of using Defendants' platforms;
- g. addressing property damaged as a result of students acting out because of mental, social, and emotional problems Defendants' conduct is causing;
- h. confiscating devices on which students use Defendants' platforms while in class or on Plaintiff's school campuses;
- i. meeting with students and the parents of students caught using Defendants' platforms at school or other disciplinary matters related to students' use of Defendants' platforms;
- j. diverting time and resources from instruction activities to notify parents and guardians of students' behavioral issues and attendance;
- k. updating its student handbook to address use of Defendants' platforms; and
- l. updating school policies to address use of Defendants' platforms.

348. Fully abating the nuisance resulting from Defendants' conduct will require much more than these steps.

349. As detailed herein, Plaintiff has suffered special damage different in kind or quality from that suffered by the public in common. The damages suffered by Plaintiff have been greater in degree and different in kind than those suffered by the general public including, but not limited to, costs arising from: expending, diverting, and increasing personnel to provide mental health services; expending, diverting, and increasing resources to address mental health issues;

expending, diverting, and increasing staff time to confiscate cell phones and other devices; expending, diverting, and increasing staff time to communicate and engage with parents; expending, diverting, and increasing staff time associated with student discipline; expending, diverting, and increasing staff time associated with routing students to counselors; expending, diverting, and increasing staff time to train staff to identify students exhibiting symptoms affecting their mental health; expending, diverting, and increasing resources for modifications to mental health curriculum; and expending, diverting, and increasing resources to repair property damages as a result of the exploitive and harmful content Defendants directed to students.

350. As a result of Defendant's conduct, Plaintiff has incurred damages and is entitled to compensation therefor. Plaintiff requests all the relief to which it is entitled in its own right and relating to the special damage or injury it has suffered, including actual and compensatory damages in an amount to be determined at trial and an order providing for the abatement of the public nuisance that Defendants have created or assisted in the creation of, and enjoining Defendants from future conduct contributing to the public nuisance described above. Plaintiff's claim is not brought in any representative or *parens patriae* capacity on behalf of students.

351. Defendants engaged in conduct, as described above, that constituted malice and/or intentional, wanton, willful, or reckless disregard of Plaintiff's rights, being fully aware of the probable dangerous consequences of the conduct and deliberately failing to avoid those consequences.

352. Defendants' conduct, as described above, was intended to serve their own interests despite having reason to know and consciously disregarding a substantial risk that their conduct might significantly injure the rights of others, including Plaintiff, and/or Defendants consciously pursued a course of conduct knowing that it created a substantial risk of significant harm to others, including Plaintiff. Defendants regularly risk the health of consumers and users of their platforms with full knowledge of the dangers of their platforms. Defendants consciously decided not to redesign, warn, or inform the unsuspecting public, including Plaintiff's students or Plaintiff. Defendants' willful, knowing, and reckless conduct therefore warrants an award of aggravated or punitive damages.

1 353. Defendants are jointly and severally liable because the harms resulting from their
2 acts are indivisible.

3 **COUNT TWO — NEGLIGENCE**

4 354. Plaintiff incorporates by reference each and every preceding paragraph.

5 355. Defendants owed Plaintiff a duty to not expose Plaintiff to an unreasonable risk of
6 harm, and to act with reasonable care as a reasonably careful person and/or company would act
7 under the circumstances.

8 356. At all times relevant to this litigation, Defendants owed a duty to consumers and
9 the general public, including Plaintiff, to exercise reasonable care in the design, research,
10 development, testing, marketing, supply, promotion, advertisement, operation, and distribution of
11 Defendants social media platforms, including the duty to take all reasonable steps necessary to
12 design, research , market, advertise, promote, operate, and/or distribute their platforms in a way
13 that is not unreasonably dangerous to consumers users, including youth.

14 357. At all times relevant to this litigation, Defendants owed a duty to consumers and
15 the general public, including Plaintiff, to exercise reasonable care in the design, research,
16 development, testing, marketing, supply, promotion, advertisement, operation, and distribution of
17 their social media platforms, including the duty to provide accurate, true, and correct information
18 about the risks of using Defendants' platforms; and appropriate, complete, and accurate warnings
19 about the potential adverse effects of extended social media use, in particular, social media
20 content Defendants directed via their algorithms to users, including youth.

21 358. At all times relevant to this litigation, Defendants knew or, in the exercise of
22 reasonable care, should have known of the hazards and dangers of their respective social media
23 platforms and specifically, the health hazards their platforms posed to youth in particular,
24 especially extended or problematic use of such platforms.

25 359. Accordingly, at all times relevant to this litigation, Defendants knew or, in the
26 exercise of reasonable care, should have known that use of Defendants' social media platforms
27 by youth could cause Plaintiff's injuries and thus created a dangerous and unreasonable risk of
28 injury to Plaintiff.

1 360. Defendants also knew or, in the exercise of reasonable care, should have known
2 that users and consumers of Defendants' social media platforms were unaware of the risks and
3 the magnitude of the risks associated with the use of Defendants' platforms including but not
4 limited to the risks of extended or problematic social media use and the likelihood that
5 algorithm-based recommendations would expose child and adolescent users to content that is
6 violent, sexual, or encourages self-harm, among other types of harmful content.

7 361. As such, Defendants, by action and inaction, representation and omission,
8 breached their duty of reasonable care, failed to exercise ordinary care, and failed to act as a
9 reasonably careful person and/or company would act under the circumstances in the design,
10 research, development, testing, marketing, supply, promotion, advertisement, operation, and
11 distribution of their social media platforms, in that Defendants designed, researched, developed,
12 tested, marketed, supplied, promoted, advertised, operated, and distributed social media
13 platforms that Defendants knew or had reason to know would negatively impact the mental
14 health of consumers, particularly youth, and failed to prevent or adequately warn of these risks
15 and injuries.

16 362. Despite their ability and means to investigate, study, and test their social media
17 platforms and to provide adequate warnings, Defendants have failed to do so. Defendants have
18 wrongfully concealed information and have made false and/or misleading statements concerning
19 the safety and use of Defendants' social media platforms.

20 363. Defendants' negligence includes:

21 a. Designing, researching, developing, marketing, supplying, promoting,
22 advertising, operating, and distributing their social media platforms without thorough and
23 adequate pre- and post-market testing; design, research, development, testing, marketing, supply,
24 promotion, advertisement, operation, and distribution

25 b. Failing to sufficiently study and conduct necessary tests to determine whether or
26 not their social media platforms were safe for youth users;

27 c. Failing to use reasonable and prudent care in the research, design, development,
28 testing, marketing, supply, promotion, advertisement, operation, and distribution of their social

media platforms so as to avoid the risk encouraging extended social media use;

d. Designing their social media platforms to maximize the amount of time users spend on the platform and causing excessive and problematic use of their platforms, particularly among youth, through the use of algorithm-based feeds, social reciprocity, and IVR;

e. Failing to implement adequate safeguards in the design and operation of their platforms to ensure they would not encourage excessive and problematic use of their platforms;

f. Designing and manufacturing their platforms to appeal to minors and young people who lack the same cognitive development as adults and are particularly vulnerable to social rewards like IVR and social reciprocity;

g. Failing to take adequate steps to prevent their platforms from being promoted, distributed, and used by minors under the age of 13;

h. Failing to provide adequate warnings to child and adolescent users or parents who Defendants could reasonably foresee would use their platforms;

i. Failing to disclose to, or warn, Plaintiff, users, consumers, and the general public of the negative mental health consequences associated with social media use, especially for children and adolescents;

j. Failing to disclose to Plaintiff, users, consumers, and the general public that Defendants' platforms are designed to maximize the time users, particularly youth, spend on Defendants' platforms and cause negative mental health consequences;

k. Representing that Defendants' platforms were safe for child and adolescent users when, in fact, Defendants knew or should have known that the platforms presented acute mental health concerns for young users;

l. Failing to alert users and the general public, including students at Plaintiff's schools of the true risks of using Defendants' platforms;

m. Advertising, marketing; and recommending Defendants' platforms while concealing and failing to disclose or warn of the dangers known by Defendants to be associated with, or caused by, youth use of Defendants' platforms;

n. Continuing to design, research, develop, market, supply, promote, advertise,

operate, and distribute Defendants' platforms with knowledge that Defendants' platforms are unreasonably unsafe, addictive, and dangerous to youth mental health;

o. Failing to modify Defendants' algorithms, which are used to recommend content to users, in a manner that would no longer prioritize maximizing the amount of time users spend on Defendants' platforms over the safety of its youth users;

p. Failing to adequately modify Defendants' algorithm-based recommendations to filter out content that expose child and adolescent users to content that is violent, sexual, or encourages self-harm, among other types of harmful content.

q. Committing other failures, acts, and omissions set forth herein.

364. Defendants knew or should have known that it was foreseeable that Plaintiff would suffer injuries as a result of Defendants' failure to exercise reasonable care in designing, researching, developing, testing, marketing, supplying, promoting, advertising, operating, and distributing Defendants' platforms, particularly when Defendants' platforms were designed, developed, operated and marketed to maximize the time youth spend on Defendants' platforms.

365. Defendants could have reasonably foreseen the probable harm caused by their negligence. Each Defendant's acts and omissions were a substantial factor in causing harm to Plaintiff.

366. Plaintiff did not know the nature and extent of the injuries that could result from the intended use of Defendants' social media platforms by Plaintiff's students.

367. Defendants' negligence helped to and did produce, and was the proximate cause of, the injuries, harm, and economic losses that Plaintiff suffered and will continue to suffer, and such injuries, harm, and economic losses would not have happened without Defendants' negligence as described herein.

368. The mental health crisis caused and/or significantly contributed to by Defendants has caused a major disruptive behavioral situation in Plaintiff's schools, and Plaintiff has had to take steps to mitigate the harm and disruption caused by Defendants' conduct, including the following:

a. hiring additional personnel to address mental, emotional, and social health issues;

- b. developing additional resources to address mental, emotional, and social health issues;
- c. increasing training for teachers and staff to identify students exhibiting symptoms affecting their mental, emotional, and social health;
- d. training teachers, staff, and members of the community about the harms caused by Defendants' wrongful conduct;
- e. developing lesson plans to teach students about the dangers of using Defendants' platforms;
- f. educating students about the dangers of using Defendants' platforms;
- g. addressing property damaged as a result of students acting out because of mental, social, and emotional problems Defendants' conduct is causing;
- h.
- i. confiscating devices on which students use Defendants' platforms while in class or on Plaintiff's school campuses;
- j. meeting with students and the parents of students caught using Defendants' platforms at school or other disciplinary matters related to students' use of Defendants' platforms;
- k. diverting time and resources from instruction activities to notify parents and guardians of students' behavioral issues and attendance;
- l. investigating and responding to threats made against Plaintiff's schools and students over social media;
- m. updating its student handbook to address use of Defendants' platforms; and
- n. updating school policies to address use of Defendants' platforms.

369. Defendants' conduct, as described above, was intended to serve their own interests despite having reason to know and consciously disregarding a substantial risk that their conduct might significantly injure the rights of others, including Plaintiff, and/or Defendants consciously pursued a course of conduct knowing that it created a substantial risk of significant harm to others, including Plaintiff. Defendants regularly risk the health of consumers and users

1 of their platforms with full knowledge of the dangers of their platforms. Defendants consciously
2 decided not to redesign, warn, or inform the unsuspecting public, including Plaintiff's students or
3 Plaintiff. Defendants' willful, knowing, and reckless conduct therefore warrants an award of
4 aggravated or punitive damages.

5 **COUNT THREE — GROSS NEGLIGENCE**

6 370. Plaintiff incorporates by reference each and every preceding paragraph.

7 371. Defendants owed Plaintiff a duty to not expose Plaintiff to an unreasonable risk of
8 harm, and to act with reasonable care as a reasonably careful person and/or company would act
9 under the circumstances.

10 372. Defendants owed a duty to users and the general public, including Plaintiff, to
11 exercise reasonable care in the design, research, development, testing, marketing, supply,
12 promotion, advertisement, operation, and distribution of Defendants social media platforms,
13 including the duty to take all reasonable steps necessary to design, research, market, advertise,
14 promote, operate, and/or distribute their platforms in a way that is not unreasonably dangerous to
15 users, including children.

16 373. Defendants owed a duty to users and the general public, including Plaintiff, to
17 exercise reasonable care in the design, research, development, testing, marketing, supply,
18 promotion, advertisement, operation, and distribution of their social media platforms, including
19 the duty to provide accurate, true, and correct information about the risks of using Defendants'
20 platforms; and appropriate, complete, and accurate warnings about the potential adverse effects
21 of extended social media use, in particular, social media content Defendants directed via their
22 algorithms to users.

23 374. Defendants knew or, in the exercise of reasonable care, should have known of the
24 hazards and dangers of their respective social media platforms and specifically, the health
25 hazards their platforms posed to youth in particular, especially extended or problematic use of
26 such platforms.

27 375. Defendants' platforms were and are of the type that could endanger others,
28 particularly youth, if negligently made, promoted, or distributed. Defendants knew the risks that

1 young people would be attracted to their platforms yet unable to appropriately limit their use of
2 Defendants platforms because of their still-developing brains. Further, Defendants knew the risks
3 their platforms posed to youth, especially extended or problematic use of such platforms.

4 376. Defendants were grossly negligent in designing, researching, developing, testing,
5 marketing, supplying, promoting, advertising, operating, and distributing their social media
6 platforms.

7 377. As widely used platforms backed by powerful algorithms designed to maximize
8 the amount of time users spend on the platform, Defendants knew or should have known their
9 platforms needed to be designed, researched, developed, tested, marketed, supplied, promoted,
10 advertised, operated, and distributed with due care to avoid causing needless harm. Defendants
11 knew or should have known their products could cause serious risk of harm, particularly to
12 young persons like students in Plaintiff's schools.

13 378. Defendants consciously disregarded those risks and engaged in gross, willful,
14 and/or wanton conduct that lacked any care and amounted to an extreme departure from what a
15 reasonably careful person would do in the same situation to prevent harm to others. Defendants'
16 willful and wanton conduct caused Plaintiff to suffer harm.

17 379. The gross, willful, and wanton conduct of Defendants includes, but is not limited
18 to, the following:

- 19 a. Designing researching, developing, marketing, supplying, promoting, advertising,
20 operating, and distributing their social media platforms without thorough and
21 adequate pre- and post-market testing; design, research, development, marketing,
22 supply, promotion, advertisement, operation, and distribution;
- 23 b. Failing to sufficiently study and conduct necessary tests to determine whether or
24 not their social media platforms were safe for youth users;
- 25 c. Failing to use reasonable and prudent care in the research, design, development,
26 testing, marketing, supply, promotion, advertisement, operation, and distribution of
27 their social media platforms so as to avoid the risk of encouraging extended social
28 media use;

- d. Designing their social media platforms to maximize the amount of time users spend on the platform and causing excessive and problematic use of their platforms, particularly among youth, through the use of algorithm-based feeds, social reciprocity, and IVR;
- e. Failing to implement adequate safeguards in the design and operation of their platforms to ensure they would not encourage excessive and problematic use of their platforms;
- f. Designing and manufacturing their platforms to appeal to minors and young people who lack the same cognitive development as adults and are particularly vulnerable to social rewards like IVR and social reciprocity;
- g. Failing to take adequate steps to prevent their platforms from being promoted, distributed, and used by minors under the age of 13;
- h. Failing to provide adequate warnings to child and adolescent users or parents who Defendants could reasonably foresee would use their platforms;
- i. Failing to disclose to, or warn, Plaintiff, users, and the general public of the negative mental health consequences associated with social media use, especially for children and adolescents;
- j. Failing to disclose to Plaintiff, users, and the general public that Defendants' platforms are designed to maximize the time users, particularly youth, spend on Defendants' platforms and cause negative mental health consequences;
- k. Representing that Defendants' platforms were safe for child and adolescent users when, in fact, Defendants knew or should have known that the platforms presented acute mental health concerns for young users;
- l. Failing to alert users and the general public, including students at Plaintiff's schools of the true risks of using Defendants' platforms;
- m. Advertising marketing; and recommending Defendants' platforms while concealing and failing to disclose or warn of the dangers known by Defendants to be associated with, or caused by, youth use of Defendants' platforms;

- n. Continuing to design, research, develop, market, supply, promote, advertise, operate, and distribute Defendants' platforms with knowledge that Defendants' platforms are unreasonably unsafe, addictive, and dangerous to youth mental health;
- o. Failing to modify Defendants' algorithms, which are used to recommend content to users, in a manner that would no longer prioritize maximizing the amount of time users spend on Defendants' platforms over the safety of its youth users;
- p. Failing to adequately modify Defendants' algorithm-based recommendations to filter out content that expose child and adolescent users to content that is violent, sexual, or encourages self-harm, among other types of harmful content; and
- q. Committing other failures, acts, and omissions set forth herein.

380. Defendants breached the duties they owed to Plaintiff and in doing so consciously disregarded the risk to the safety of others.

381. Defendants breached their duties through their false and misleading statements and omissions in the course of designing, manufacturing, distributing, and marketing their social media platforms.

382. As a foreseeable consequence of Defendants' breaches of their duties, Plaintiff has suffered and will continue to suffer direct and consequential economic and other injuries as a result of dealing with the youth mental health crisis in Plaintiff's schools, as described herein.

383. Defendants engaged in conduct, as described above, that far exceeded ordinary inadvertence or inattention and constituted reckless, outrageous, and wanton conduct with intent to cause injury and/or with willful and knowing disregard of the rights or safety of another, being fully aware of the probable dangerous consequences of the conduct and deliberately failing to avoid those consequences despite the unreasonable risk of harm.

384. Defendants regularly risk the health and lives of users of their platforms with full knowledge of the dangers of their platforms. Defendants made conscious decisions not to redesign, warn, or inform the unsuspecting public, including Plaintiff and Plaintiff's students. Defendants' willful, knowing, and reckless conduct therefore warrants an award of aggravated or

1 punitive damages.

2 **VII. PRAYER FOR RELIEF**

3 WHEREFORE, Plaintiff prays for judgment as follows:

4 385. Entering an Order that the conduct alleged herein constitutes a public nuisance
5 under Arizona law;

6 386. Entering an Order that Defendants are jointly and severally liable;

7 387. Entering an Order requiring Defendants to abate the public nuisance described
8 herein and to deter and/or prevent the resumption of such nuisance;

9 388. Enjoining Defendants from engaging in further actions causing or contributing to
10 the public nuisance as described herein;

11 389. Awarding equitable relief to fund prevention education and treatment for
12 excessive and problematic use of social media;

13 390. Awarding actual, compensatory, and punitive damages;

14 391. Awarding statutory damages in the maximum amount permitted by law;

15 392. Awarding reasonable attorneys' fees and costs of suit;

16 393. Awarding pre-judgment and post-judgment interest; and

17 394. Such other and further relief as the Court deems just and proper under the
18 circumstances.

19 **VIII. JURY TRIAL DEMAND**

20 395. Plaintiff hereby demands a trial by jury.
