Playground & Athletic Surfaces

Playgrounds

Poured-in-Place

Comprised of the highest quality EPDM or TPV rubber granules blended with a polyurethane binder, our surfacing is poured-in-place and professionally installed on site as a 2-layer system for playgrounds.

The bottom impact absorbing layer is made of clean, recycled rubber buffing. The top decorative wear layer consists of high-quality EPDM or TPV rubber granules. The wear layer is available in a wide variety of color blends and provides the option to create fun theme shaped designs.

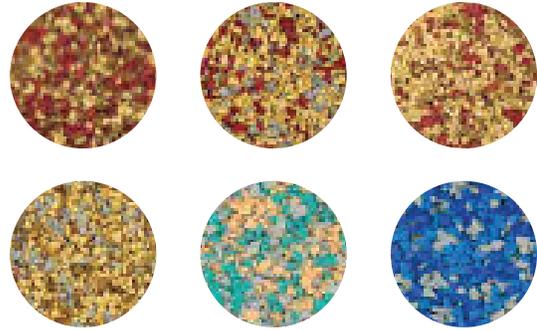

Water Play

Poured-in-Place

No Fault® Surfaces for Water Play is manufactured on site. The blending of multiple color combinations to create custom inlaid graphic designs and patterns makes it the perfect play surface for pool decks, splash pads, and themed environments.

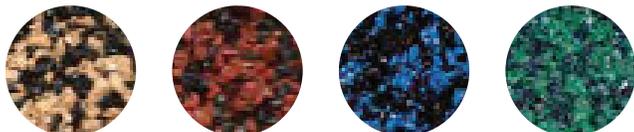

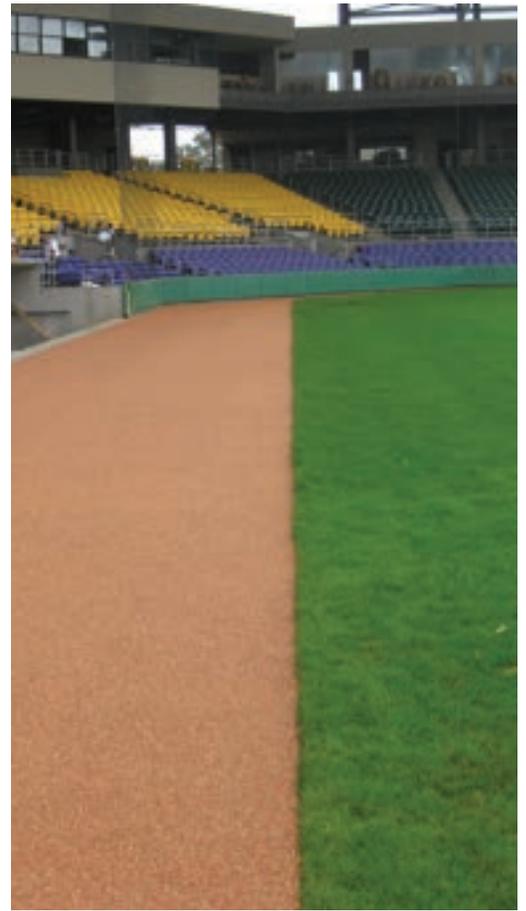

Multi-Purpose

Poured-in-Place

Multi-Purpose Applications are designed for high intensity recreation areas to promote active play while allowing a cooler, slip resistant, and less abrasive surface than alternative surfaces.

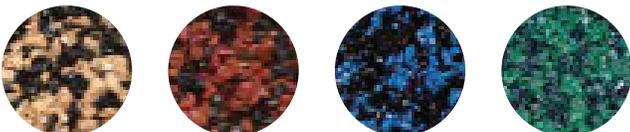

Athletic Fields

Poured-in-Place

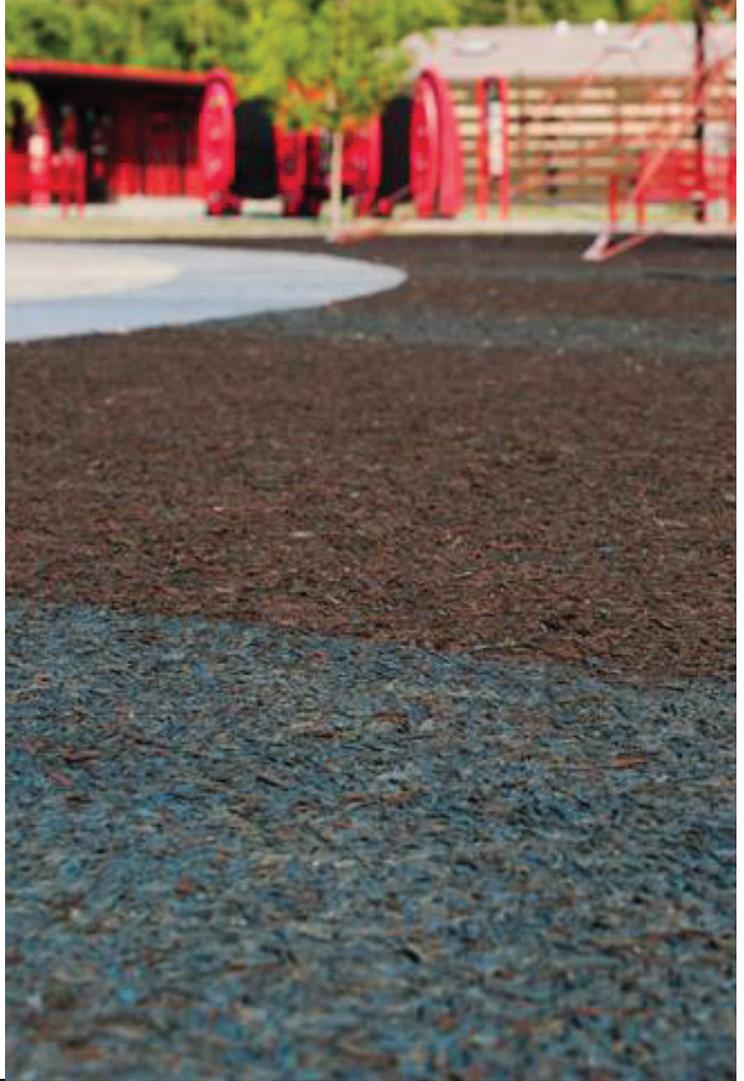

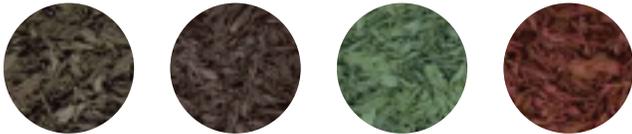

Accessible Ballfields are designed to be ADA compliant and promotes inclusive play for children of all ages and abilities. Existing Accessible Ballfields can be given new life by applying the No Fault Safety Surface for Accessible Ballfields as a resurfacing option. Same as new fields, the surface is installed at ½" thickness over the old rubber surfacing and can incorporate a variety of colors and designs.

Bonded Mulch

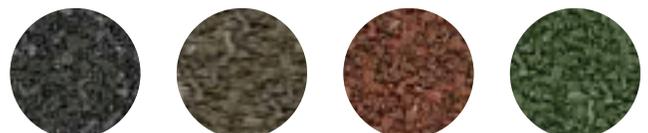

Poured-in-Place

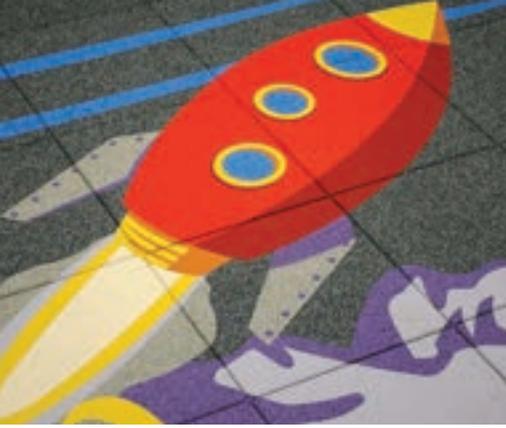

Bonded Rubber Mulch (poured-in-place) utilizes clean, 100% recycled shredded rubber mulch combined with a single component polyurethane binder to achieve a unique, attractive, and natural look for outdoor activity areas. Always ready for use, the extremely porous bonded mulch allows water to rapidly flow through the surface.

Loose Mulch

Loose Fill Rubber Mulch is made from clean, 100% recycled tires and provides excellent fall protection. No Fault Rubber Mulch is an environmentally sustainable product that is non-toxic and non-staining. The color will not rub off on clothing, skin, or pets, and color will not bleed with rain.

Tiles

Tiles are manufactured in the USA utilizing 100% environmentally sustainable recycled rubber. Our tiles are engineered exclusively to reduce the risk of serious injury associated with falls from playground equipment and other elevated surfaces.

Turf

Turf is the new generation of safety surface designed to bring sustainability, long-term value, and improved performance to playgrounds and multipurpose open-play areas. This beautiful and lush artificial turf created for playgrounds features proprietary sports performance fibers proven to outperform ordinary landscape fibers.

What makes No Fault different?

- Over half a century in the industry—a long standing industry presence
- Use of only quality materials
- Certified installation crews nationwide
- Offers various surfacing options
- Offers a standard 5 year limited warranty
- Meets ASTM standards
- Member of IPEMA
- Completed many high profile projects for nationally recognized corporations
- LEED Certified
- Sales Team has an average of 15 years of experience
- Provides network of resources and industry connections
- Strong vendor relations—important when supply chain gets tight
