1. Unlock your hot tub cover straps and fully open the spa cover.

2. Depending on your hot tub model, open the spa filter lid or basket.

3. Using the hot tub control panel, start the clean cycle.

4. Carefully measure the recommended amount of granular or liquid spa chemicals.

5. Pour the hot tub chemicals into the water above the filter.

6. Once the hot tub cleaning cycle finishes, wait an additional ten minutes to allow for chemicals to dissipate before closing the hot tub filter cover, closing up or using your spa. For safety, never leave your hot tub unattended when the cover is removed or open.

7. After the ten minutes, return the hot tub filter lid or basket, close the cover and lock the straps.
