

Enterprise Mobility Suite:

Simplify security, Stay productive

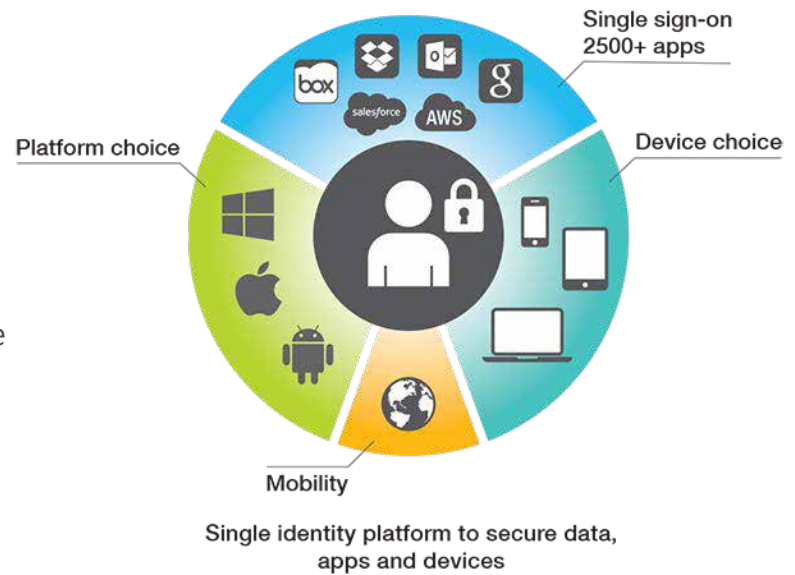

Protect data and empower workers

Unsecured company data can cost millions in lost research, regulatory fines, or litigation settlements, but protecting your information shouldn't make it harder for workers to get their jobs done.

Microsoft Enterprise Mobility Suite (EMS) helps reduce security risks and enables workers to be more productive with features like:

- Identity and access management
- Information protection
- Device and application management
- Cyber intrusion detection

Enterprise security needs

Control access to confidential data

Lock down devices to make remote workers more efficient

Avoid regulatory fines

Prevent negative brand exposure and litigation costs

Provide all workers with simple, secure access to 2,500+ apps

EMS can help...

Implement multi-factor authentication (MFA) to help prevent unauthorized access. **Secure information** across file servers, email, and collaboration platforms with **document tracking and encryption**.

Enforce security policies on corporate-owned or personal devices to prevent data theft, even if devices are lost or stolen.

Centrally manage and secure devices so that they comply with industry and government regulations for information security. **Quickly provision and deprovision identities and access** for new, temporary, or exiting employees.

Identify cyber attacks before data is compromised **using behavior-based analytics** that leverage Machine Learning to inspect all network traffic.

Enable single sign-on (SSO) so workers only need one password or biometric/PIN combination to access all the applications they need.

“We use the Enterprise Mobility Suite to empower employees to use their own devices to securely access and share their data. The upshot? We’re improving project management and reducing costs.”

– Patrick Wirtz, Innovation Manager, The Walsh Group

Why EMS is right for your business

EMS includes Azure Active Directory, Azure Rights Management, Microsoft Intune, and Advanced Threat Analytics to provide organizations with cost-effective, comprehensive security for users, devices, applications, and data.

Secured, flexible access to company resources

- Single sign-on to any application on your favorite device.
- Corporate policy enforcement for accessing resources from corporate or personal devices.
- Managed access to more than 2,500 pre-integrated SaaS applications, as well as your own custom cloud or on-premises hosted web applications.

Layered protection against data theft

- Trusted multi-factor authentication engine that processes billions of requests every week.
- Data encryption that follows documents everywhere.
- Behavioral analytics to pinpoint cyber attacks before information can be compromised.

Low licensing and implementation costs

- Comprehensive security coverage for nearly half the price of third-party solutions.
- Self-service password reset can reduce Help Desk calls by an average of 25%.
- Simple set-up, always up to date, and connects to your on-premises datacenter.
