In the HudsonAlpha BioTrain Internship program, students have the opportunity to connect classwork with real-world job experience and gain skills and knowledge that will prepare them for higher education coursework as well as careers in biotechnology and related fields.

Summer positions are available for undergraduate through master’s level graduate students, providing experiences that range from in-depth laboratory research to bioinformatics, biotechnology marketing and business strategy. Internships are offered through HudsonAlpha’s nonprofit research labs, educational, economic development and communications departments as well as many of the associate companies. Interns are provided a stipend, and housing is available on a limited basis.

The HudsonAlpha BioTrain Internship program is hosted on the campus of HudsonAlpha Institute for Biotechnology in Huntsville, Alabama. HudsonAlpha Institute for Biotechnology is a nonprofit institute dedicated to developing and applying scientific advances to health, agriculture, learning, and commercialization. Opened in 2008, HudsonAlpha’s vision is to leverage the synergy between discovery, education, medicine, and economic development in genomic sciences to improve the human condition around the globe.
