

Formula Friday

In class, we are focusing on not just getting the correct answer in math, but on communicating how we're solving different questions and different word problems. On November 2nd, the students have a math test on Unit 2. For this week and next week, we're asking the students to use the *Formula Friday* time to study for this math test. Here is their challenge:

In the box below (for this week) and the box on the back (for next week), show us how you're studying for this math test. How are you showing us your work and telling us about the strategies you're using? In these boxes, show us different problems that you're solving, how you're solving them, and how you can explain your solutions. Depending on the details you include in your answers, you may want to show us just two problems a week or you may want to show us more. **Don't forget that it's important to communicate in math!**
