

Formula Fridays

We have been completing a lot of work on Data Management. Our goals are to create graphs based on the information we receive and to interpret that information. To practice these goals, we are going to use some information from one of my favorite books that imagines the world as a village of just 100 people. Here are the steps for this homework assignment:

1. Choose one of the photocopied pages based on the following topics: nationalities, languages, ages, and food.
2. Place the page you choose in your backpack right away so you do not lose it.
3. Choose information from that page and make a graph with that information. You do not have to graph all the information that is represented on the page.
4. Write, email, or blog three facts that you can interpret from the data you graphed.
