

Formula Fridays - Grade 5

We just finished our unit on Number Patterns. We looked at different ways to create, identify, and extend patterns, build models to represent patterns (e.g., using manipulatives to show a number pattern that we made), and make predictions about growing and shrinking patterns. Think about what you learned as part of this unit. Share your learning with me.

You could ...

- Draw and write about number patterns.
- Make a movie about number patterns and share it with me.
- Email me about number patterns (aviva.dunsiger@hwdsb.on.ca).
- Blog about number patterns.
- Be creative and show me your learning in any way that you choose.

Remember to use specific examples, explain your thinking, and really show me what you know about number patterns.
