

Formula Fridays - Grade 5

We're just starting a new unit on Data Management. We want to be able to look closely at data in charts, graphs, and tables to understand the data better and make inferences about the reasons for the results. To help with this unit, we're going to survey various people to collect data.

With your parents, write **5 survey questions to ask students in Grades 4-6.** Here are some things to consider:

- 1) The students answering these questions will be from around the world.
- 2) The students answering these questions will be both boys and girls.
- 3) We're going to be working with the data that we receive in different ways over the next couple of weeks.

After you write your questions, explain why you chose to ask each one. How did my considerations affect your choices? Be specific.

Please note that you can print/write these questions, email them to me, or post them on your blog. I'm excited to see what you ask.
