

Act 1) - who she is feeding?

- Is she actually talking on the phone?
- how much food is actually buying (what is the amount altogether)?
- Why does she need this ?
- What is she looking at on her I-Pad?
- Why did she choose those things
- is she pretending?

Act 2) I think she's going to ask how much money does it cost altogether ?

Act 2 ①

Halimo	Aamon	Rawhiya
My Estimation	My Estimation	My Estimation
is 150	is 108	is 156

I know altogether its 150 because the amount of money has to be higher then how much things ms. Ritter bought

I added up all the items ms. Ritter bought.

I think this because Rawhiya ms. Ritter bought 82 things and I know the amount of money is higher then how much things shes buying

Rawhiya

Halimo Aamon

Endo

Act 2 ②

14 pizza

12 salad

28 fruit

28 muffins

82 items

14 Pizzas

12 Caesar Salads

28 fruit cups

28 muffins

$$14 + 14 + 14 + 14 + 14 + 14 + 12 + 12 + 12 + 12 + 28 + 28 + 28 + 28 + 28 = 272$$

Altogether ms. Ritter pays \$272.
