

snapLOCK

Ideal for downspout extensions!

What is a Snaplock?

A Snaplock is the best fastener to secure a downspout extension to a flip-up. The Snaplock is made of aluminum and the washer is made of nylon for an extended life.

A gutter downspout extension and flip-up can give a homeowner the flexibility they need when mowing, landscaping, or working on their home.

Traditional fasteners such as rivets and screws will wear and pull out creating a callback or warranty problem. That creates an unhappy homeowner and extra costs to the contractor to go back and fix the problem. The Snaplock provides homeowners with the flexibility needed and provides contractors with the most reliable gutter extension fastener available
