CONVERTIBLE ROOF RAIL SET

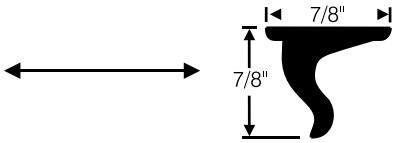

Steele RUBBER PRODUCTS

This roof rail weatherstrip set has been carefully made, trimmed and packaged into a set. Please immediately check it over for completeness as follows: the roof rail weatherstrip set consists of the 8 pieces listed here.

Ⓐ two strips, end-trimmed for right and left windshield post. These are approximately 16-1/2" long, with a cross section:

Ⓑ two strips, end-trimmed for right and left, for front section of roof rail over door, These are approximately 24-12" long, with a cross section:

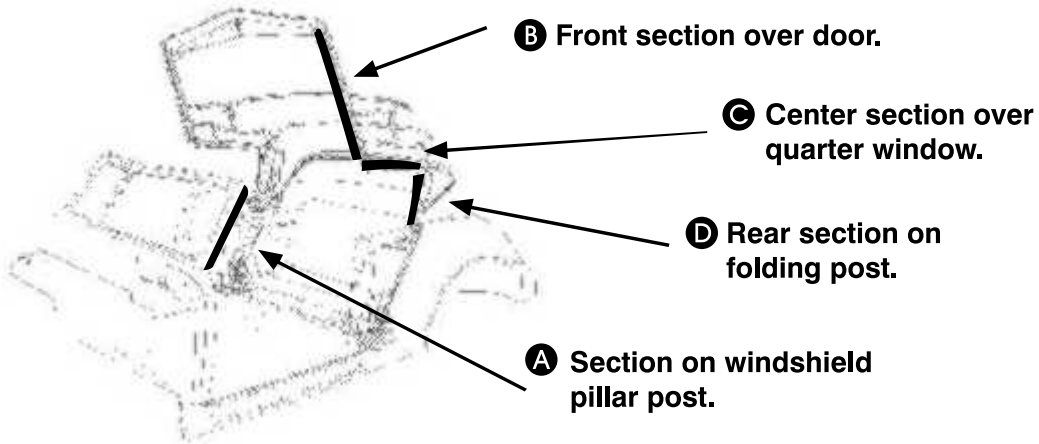

Ⓒ two strips, end-trimmed for right and left hand, for the center section of each side roof rail, over the quarter window. These sections are approximately 22-1/2" long, and may be identified by the 8 " long deeper section near the center. This, in addition to the angular end trims, distinguished right hand from left. The end with the 8-1/2" straight section is the front.

Ⓓ two strips, end-trimmed for right and left hand, for the rear side roof rail, or sometimes called "folding posts" weatherstrip. These are about 10-3/4" long, and of the same cross section as the strips over the door (B).

All of these strips should easily fit the metal weatherstrip retainer on your car, but if you do not apply the cloth covering before installing them (some owners do not want the cloth covering), some of them may fit rather loosely. If so, it will help to apply a layer or two of adhesive or friction tape inside on the bottom of the retainer to use up the available space.

To determine right or left hand applications, usually a comparison with the old weather-strip will tell you which side is which. Occasionally a small amount of additional end-trimming is necessary to get the kind of fit that you want. Be very careful with this as the rubber strips should be long enough so that when the top is in place, the ends of the rubber strips meet each other.

For those desiring the cloth covering, our 70-1172-65 or 70-1173-65 should be used, as it is the original cotton bowdrill material to which we have applied a high quality double sided adhesive, making it easy to apply.
