Use this table to find the sum of the first n terms of an A.P.

DEFINITIONS
 A series is a list of numbers.
 The first number in the list is the first term.
 The last number in the list is the last term.
 The number of terms in the list is the number of terms.
 The sum of the terms in the list is the sum of the series.
 The average of the terms in the list is the average of the series.
 The range of the terms in the list is the range of the series.
 The mode of the terms in the list is the mode of the series.
 The median of the terms in the list is the median of the series.
 The mean of the terms in the list is the mean of the series.
 The standard deviation of the terms in the list is the standard deviation of the series.

Use this table to find the sum of the first n terms of an A.P.
