

Young Israel of Bal Harbour The Dose

Tuesday, May 31, 2016, Iyar 23, 5776

Sponsored by: Susan and Aaron Weinberg

in honor of our Rav, Rabbi Moshe Gruenstein for his teaching and spiritual leadership.

In chemistry there is a difference between a “mixture” and a “compound”. Salt, which is dissolved in water is a mixture. The water can be separated by evaporation and you are left with salt. In a compound the two elements combine to form a new substance. For example, when oxygen and hydrogen are combined in the right amounts it becomes a new entity: Water! This is a good analogy to marriage. The goal of married life is not to be a mixture but a compound. That these two people, man and woman, are transformed into a single unit!

Wishing you an inspiring day!

Rabbi Moshe Gruenstein
