IMPA Advisor and
Head of Digital, AX Digital

Up-to-date

THE IMPA MARINE STORES GUIDE IS UNDERGOING A TRANSFORMATIONAL PROCESS THAT IS AS SIGNIFICANT AS THE LAUNCH OF THE STANDARD ITSELF

“

For over 40 years, the Marine Stores Guide has served as the world's leading referencing tool for marine purchasing and supply. A six-digit code was introduced to simplify processes, enable people of different cultures and languages to easily specify marine stores and promote business between ship owners/shipboard personnel and ship suppliers. Today, the codes are being used on 12000+ vessels by 300+ shipping companies and by 20,000+ ship-supplying companies worldwide.

First published in 1978 in its well-known book format, the Marine Stores Guide and its unique six digit code quickly became a universal standard. After many successful years and growth in popularity, in 2005, the MSG became available as a data licence, offering all the

WE ARE FULLY COMMITTED TO THE DEVELOPMENT OF THE MSG DATA FOR CONTINUED PROGRESS AND DEVELOPMENT SO WE CAN SERVE THE INDUSTRY AND THE FUTURE NEEDS OF OUR STAKEHOLDERS

Yuzo Koike, IMPA VP of MSG Portfolio and Director, Fuji Trading

codes and categories in a handy CSV format great for importing into bespoke systems and being easily searchable on computers. Late in 2018, to further improve the MSG's offering, a publisher licence was introduced, enabling manufacturers, wholesalers and ship suppliers to enhance their sales worldwide. Now, we are pleased to announce that the next phase is upon us, that is the digitisation of the MSG.

A NEW SYSTEM

IMPA and Fuji have been working together over the last four years to create a future-proof solution for the MSG, starting with the development of an API. An API (Application Programming Interface)

THE SHORT READ

Digitisation of the MSG is well underway

A new API offers 'live' product management

Web app will offer a new way to use data

“

MOST IMPORTANTLY OF ALL AN API WILL IMPROVE THE MSG'S DATA MOVING FORWARD, THAT'S WHY WE'RE DOING THIS

Dominic Scott, Head of Digital, AX Digital

serves as the building block foundation for many digital services and products. In the MSG's case, it allows it to offer a constant base source for the data. You can build products, links to services and communicate with it constantly, without the need to reupload the MSG's data each time something new is created.

An API will allow the MSG data to become fully 'live', replacing the way we work with the data altogether. Upon launch, all data exports will be able to be taken from the current live set of data on the API at the time, replacing the current six-month period updates to the data offering. On top of that, updating codes, fixing errors and introducing new products and categories will be a much more streamlined process. Most important of all is what services and products are able to be developed with the MSG data being stored in the API. In time, the API will be able to grow and improve by connecting with others, growing the MSG dataset and much more. "Most importantly of all, an API will improve the MSG's data moving forward; that's why we're doing this." Dominic Scott, Head of Digital.

MSG ONLINE WEB APP

The first example of what the new API allows the MSG to do comes in the form of a brand new web app. Set to enhance the way the MSG data is offered, a new product is being developed to enable data customers to login, browse, save and export products from either their computer or mobile devices. You will be able to see images, descriptions, specifications and more on each item within the MSG, as well as search by codes, keywords and categories. This web app will give the average user a much better experience when browsing MSG data and an overall easier

process when looking to purchase new products.

A simple and secure login system will ensure that only paying customers can access the now cloud-based data, which vastly helps in combating unfair use of the data due to copyright infringements and plagiarism. We understand that users may still want the MSG data supplied in its current format and you will still be able to receive it in a CSV format; this will be exported from the latest current API data set at the time of purchase.

NEXT STEPS

As we continue to develop the future of the MSG, we are always looking at making the product more accessible, usable

and secure. The developments we have discussed today are just the start of the next phase for the MSG. IMPA COO Stephen Alexander said, "There are more than six digital products in development around the Marine Stores Guide at the moment; there's more development in the product than ever before".

He added, "We have an opportunity with a more digitised approach to provide a more extensive range of codes for the stakeholders that want to see that, whilst we also look at providing reduced numbers for owners that want a specific catalogue. Our partners on this are key and we have several stakeholder groups helping us here.

There are several project working groups being established right now

looking at data-quality and looking at systems to enhance and update the data on a more systematic basis."

In our next issue, we will explain further how the MSG web app will improve data-licence holders' daily usage and take a look into the possibilities for the future of the digitisation of the Marine Stores Guide.

THE FUTURE OF THE MARINE STORES GUIDE IS NEAR.
HERE WE FURTHER OUTLINE THE DRASTIC UPCOMING CHANGES
FOR THE MSG IN GREATER DETAIL

“

**YOU'RE GOING
TO BE HANDLING
SOMETHING THAT
FEELS COMPLETELY
NEW, YET NATURAL.
THE AIM HERE IS TO
MAKE THE PRODUCT
AVAILABLE AT ANY
TIME OF DAY AND
ANYWHERE**

Dominic Scott, IMPA Advisor
and Head of Digital, AX Digital

In our previous issue, we talked about the next steps that are being undertaken for the Marine Stores Guide (MSG) by announcing a brand new API system for all categories and listings. Further to that, we also announced the first product to utilise the API, the MSG Online Web App; this is an online browsable catalogue of every category and product listed in the MSG.

In this article, we will outline more details on both the MSG API and Web App, how you will be able to use them and when you can expect them to launch publicly.

AT YOUR FINGERTIPS

Shortly after launch, the MSG quickly became the industry standard referencing tool for marine purchasing and supply and has remained that for more than 40 years. The MSG team has always strived to deliver a product that is up to date and easy to use. With new advancements in technology, we are now able to provide the next evolution of the MSG, which is fully digital and accessible to

API enables new products to be developed and much more

anybody with intermittent access to the internet. The MSG Online App is our first brand new project to be announced because of that.

Here is a simple breakdown of how the app will work for the average user:

- The MSG customer will be given login credentials;
- They will be able to access the app via a link on any device (desktop, mobile, etc.);
- Once logged in, they will be able to browse the entire MSG catalogue and search by keywords and directly with an MSG six-digit code;
- Each product viewed has its page with specifications, a description and images;
- The user can save any catalogue item to a 'shopping cart';
- Once the user's session is completed, they can export their 'shopping cart' to a handy CSV or PDF file.

We hope to deliver a new product that will allow all users access to the MSG catalogue at any time, wherever they are. It can be used at your leisure from your mobile device or a desktop computer when compiling your next big order. Due to being linked to the brand new API, it will always be up to date with the latest adjustments in the MSG catalogue. It will offer lightning-fast search speeds from anywhere in the world and a secure connection from whatever device you log in on.

The new web app—set to launch at the beginning of

“

2020—will offer the best way yet to search and view the entire MSG catalogue through an easy-to-use intuitive design. Dominic Scott, IMPA Advisor and Head of Digital at AX Digital, said, “You’re going to be handling something that feels completely new, yet natural. The aim here is to make the product available at any time of day and anywhere.”

FUTURE-PROOF

The many years dedicated to the development of the MSG API have led to the next evolution in the product. While the MSG book will continue to exist alongside our current data-offering format, technology today is allowing the product to be pushed forward in all-new ways.

Stephen Alexander, IMPA Secretary General and COO, said, “The MSG Online web app is the first announced example of what is being developed for the MSG, but very soon we will be announcing more developments in the product range that will further cement the Marine Stores Guide as the only marine referencing tool needed for all purchasing and supply users.

We have put in a lot of hard work to the MSG API to open many doors for the product in the future. With the API, we have a solid foundation to build upon with any future digital MSG products.”

The future of the MSG is here, and we cannot wait to share more.

The Marine Stores Guide is the world's leading reference code within the maritime industry

The Marine Stores Guide is the world's leading reference code within the maritime industry. The MSG Data licence provides a universal coding system to facilitate communication between crew, owner and supplier, making the specification and supply of goods simple quick and effective.

With the latest and most complete version of the data now available, there's no better time than now to start using the unique six digit code in your IT system.

The data features more than 50,000 products provided by suppliers and manufacturers from around the world. Regular updates are included as part of the Data Licence.

The NEW IMPA MSG Publisher Licence opens the door to ship suppliers, manufacturers and wholesalers to enhance sales worldwide. **Publish the IMPA MSG unique six-digit codes alongside your own codes**
